Acorn and Logica to go public

by John Kavanagh

Acorn is putting about 30% of its FAST growth by microcomputer manufacturer Acorn Computer and consultancy Logica is taking these UK items into Stock Exchange listings to raise cash.

BBC computer sales have pushed Acorn's profits from £306,000 to £2.3 million this year, while turnover reached £42 million. Production of the £199 Electron home computer is to be doubled. Some 100,000 machines will be made by AB Electronics — and that will create 100 jobs at the company's factory in Wales.

Acorn hopes to raise £10 million by offering 10% of its equity on the Unlisted Securities Market, a cheaper and less demanding way of getting into the Stock Exchange than going for full listing.

Co-founders Chris Curry and Hermann Hauser say they must continue to come up with new ideas to keep their market position. Plans include a link to enable the computer to control household lighting, plus an adapter to allow an Electron to connect through a telephone to the fax network.

Meanwhile Logica managing director Len Taylor revealed the company's plans for a full Stock Exchange listing when he announced results showing 27% growth to £42.2 million for the year ending June 30. Pre-tax profit was up 55% to £3.35 million.

The listing would also give Lo-

Logica is putting about 30% of its shares on the market in two months' time. A third will be new shares to bring money into the company. The 220 staff shareholders will see their ownership of the company drop from 55% to below 50%.

The other shareholders are investment institutions such as pension funds.

"We've grown very rapidly in the last two years and need cash for working capital, expansion and capital investment," Taylor said. "We need a big investment in computer equipment to back our work on products and systems."

Taylor said Logica had some interesting opportunities, especially in the US. The company took over US banking systems specialist Freyburg Systems Associates two years ago, a move which tripled Logica's size in the US and pushed it into the banking market in a big way. The US now accounts for 14% of its business — and banking represents 22%.

But Taylor added: "Acquisitions are not top priority. Our growth so far has been of our own making rather than through takeovers."

All the same, he said the Stock Exchange listing would be useful because the shares could be used to pay for acquisitions.

The listing would also give Lo-

Logica more status in the computing market, he said.

During the last year Logica has set up a subsidiary in Darmstadt, West Germany, home of the European Space Agency, one of the company's customers. And it is soon to open a Far East operation in Hong Kong with Jardine Matheson, the colony's biggest public company. Meanwhile Logica has become the third biggest computing services company in Australia after buying the subsidiary of Planning Research Corporation

TAYLOR . . . "We've grown rapidly in the last two years".

ICL in head-on clash with its Cadcentre

ICL is going into direct competition with its Cadcentre subsidiary in a move which also pits its Perq personal computer head-on against the Apollo Domain.

In the last week ICL has unveiled the Perq 2 replacement by the original Perq and signed a £1 million three-year agreement to sell Cadcentre's Dind draughting package and GNC numerical control programming system on the new machine.

But next week Cadcentre will announce its first move into hardware sales with a package including the Apollo Domain, running Dind and GNC. The Apollo machine will also be used to spearhead Cadcentre's attack on the US. And Apollo itself will unveil some "very very significant additions" to its range next week.

Cadcentre is partly owned by ICL, which this year left a three-fifths consortium in a £1 million takeover.

The network runs a Perq 2 as a second. Previously, were linked only by Ethernet networks.

Apollo said the move could bring Perq manufacturers into the Domain's fold, record with PNX software, believe the networking standard," said Apollo UK managing director, John Parkinson, referring to the delay suffered in bringing PNX to market.

Parkinson added: "Perq has always been the whole of the Domain. You can't have multi-user DEC Vax and multi-user PCs with one standard. We expect to work with standard protocols, with standard software."

Parkinson added: "Perq has always been the whole of the Domain. You can't have multi-user DEC Vax and multi-user PCs with one standard. We expect to work with standard protocols, with standard software."

The new Perq has up to two megabytes of main memory, compared with one megabyte on the Perq 1, while control program memory, which can be written by the user, is quadrupled to 16K. Other enhancements include a 35 megabyte eight-inch Winchester drive. Prices start at just under £20,000, the same as Perq 1.

The launch sees ICL becoming one of the first of 20 companies supporting the international local area network standard to introduce a product following the standard. In June last year the firms, including big names like Digital Equipment and Hewlett-Packard, con-

cluded a deal to take the standard into the market.

ICL has sold about 50 Perq 1s, which includes 10 in the US. Three Rivers, the US firm developed the machine, Perq 2, has sold another 10. Apollo has sold about 100 units.

Both sides say the market is taking off in the next couple of weeks.

Amdahl and NAS cut prices of IBM equivalents

by Keith Holder

PRICE cuts have been announced by Amdahl and National Advanced Systems (NAS) for their plug-compatible equivalents to the IBM 308X range.

This is in response to earlier cuts by IBM. Spokesmen for both companies said that the adjustments would maintain price performance advantage of around 20%.

Speaking for Amdahl, Rick Watson said: "The reductions range from 5.5% for the low end of the 580 range, rising to 11% for the top end."

"This reflects the additional facilities provided and the anticipated superiority of the 580's residual value in comparison with IBM offerings."

European vice-president of NAS, John Clements, said: "We have been expecting the IBM

move for some time and have been factoring our normal 20% price performance margin in recent quotations in anticipation of events."

Amdahl will also honour any orders or quotations made before the cuts of the new price.

Both lease and maintenance prices, however, will remain unaltered.

Both companies denied that this was the start of a price cutting war between IBM and the plug-compatible manufacturers.

Chris Worrell, NAS's medium systems marketing manager, said: "We have had time to analyse carefully the IBM cuts and the pattern that emerges is one of readjustment, taking into account local currency fluctuations."

"The prices are now much more uniform from country to country. This isn't going to alter anything."

CLEMENTS . . . "We have been expecting the IBM move."

Radio looks at place of computing in society

by John Kavanagh

COMPUTING is taking to the airwaves next week when London Broadcasting Company (LBC) runs five days of programmes on information technology in society. Many of the programmes, featuring top industry names, will be heard across the country, as they will be passed to other local commercial stations.

LBC is being backed in the project by the Department of Trade and Industry, which is providing information and contacts.

The week coincides with the department's Concerned Technology exhibition at Alexandra Palace, covering the use of technology to help disabled people. A similar exhibition is being held in LBC's foyer.

The week will cover information technology in education, business, retailing, leisure and health.

"We want to get people to think about IT and get straight their own ideas on what it can do and how it fits into their lives," said consultant Tony Fitzpatrick, who is involved in the project.

Philip Bacon, LBC's editor, added: "The week also coincides with our tenth anniversary, so we want to do something which looks to the future."

BBC sets up link with BR

by Donald Kennett

THE BBC and British Railway have set up what they claim is the world's first electronic link between a teletext service and a viewdata service.

The link is used to transfer news about rail services to the BBC's Ceefax teletext pages via a viewdata subeditor's terminal without rekeying.

BBC teletext manager David Wilson said: "This is the beginning of what we hope will be a fairly major development in gathering information in this way. We

are negotiating to do it with a number of other people and we expect the timescale to be the next link will be fairly short - probably a matter of weeks."

There were no immediate plans to gather telesoftware by this method for its broadcasts, he added.

According to Furtone, delays were only on the software side and it wanted to announce the complete product range at once. The delays were attributed to development taking longer than anticipated and test procedures that meant two months' delay if a fault was found.

The BBC is already linked to Prestel, where it finds 13,500 frames - one of the largest databases on Prestel. It has also been used for about a year by the IBA, which transfers the information manually to its Oracle teletext.

Fortune puts single-user versions on to market

by Caroline Burgess

US MICROR makes Fortune last week announced two single-user versions of its successful 32:16 multi-user range after many delays. Other products launched at the same time include two multi-user versions, more software and communication facilities.

Last month two UK Fortune distributors bought out their own single-user machines, independently developed after the US company announced further delays.

Bill Macpherson, Fortune's UK marketing manager, said: "We were very pleased about the distributor's action, but we expect them to fall into line with us over the coming months."

The multi-user system is already linked to Prestel, where it finds 13,500 frames - one of the largest databases on Prestel. It has also been used for about a year by the IBA, which transfers the information manually to its Oracle teletext.

MACPHERSON . . . pleased.

The single-user system is based on a 32:16 processor, memory and either 1 Mbyte or 512k Winchell. Both are capable of supporting up to 16 users.

Called Professional Editions, the systems will be immediately available, with an initial price of £15,000 and just over £20,000.

The new multi-user system will start at between £11,000 and £15,000.

The multi-user system will enter a 20 or 30 node Winchester with a 45 second access time. They are described as being "Macpherson as being '2nd class'".

ways said: "We keep a check on the situation but feel that they are not powerful enough to affect the controls. They have not caused us any worries."

The CAA has not received any reports of problems from UK airlines. And in the US, only United Airlines has actually named an incident. It claimed a computer seemed to interfere with the navigation equipment causing a faulty reading.

Among the airlines to ban computers are American Airlines, United Airlines, Eastern Airlines, Western Airlines and Texas Air. All are worried about taking chances with new technology that they do not know much about.

Most US airlines ban the use of portable televisions and AM-FM radios but allow hand-held calculators. FAA regulations state that an airline has to determine if an electronic device is dangerous.

Firms start to take up grants

by John Kavanagh

UK FIRMS are starting to take advantage of government backing for the use of high technology after a slow start. Grants for computer-aided design equipment and computer-controlled machine tools in particular are proving popular in industry.

This emerges from a government report on the Industrial Development Act.

Early this year, top civil servant John Noyes said the support schemes were having little effect, despite exhibitions and extensive media coverage. He suggested the government could be reading on its own toes by offering too many overlapping schemes.

The report confirms this, but indicates that things are getting sorted out.

For example, the Flexible Manufacturing Systems Scheme, including the use of computer-controlled processes, started in 1982 with £35 million to spend over four years. By March this year only £1.42 million had been offered in the form of 51% consultancy grants and 33% development and capital costs grants. Bill projects under consideration could

amount to grants totalling £130 million.

Over 102,000 grant applications were received. Almost 90% were rejected or withdrawn.

Similarly, the Computer Design and Test Equipment Support Scheme, with a £1 million two-year budget, gave £1 million in the year ended 31. But projects in the year-end would take £2.5 million to spend for the year to 31.

Michie, who stayed in the UK after all the odds after his own work in artificial intelligence was severely set back in 1973 by the controversial Lightfoot Report, believes that computer exiles can be attracted home. "British soil has had little impact in the last decade because it lacks backing or focus in the country and our most valuable natural resources are being depleted through lack of organisation," he said.

Called the Turing Institute, after the British mathematician who laid the foundations of modern computing, the new research centre aims by being a "seed-bed of innovation" in attract the "lost generation" of British IT researchers now in the US back to the UK.

Industrialistsponsored for the first year are already oversubscribed, and are limited to eight concerns: ICL (West Gorton); Sinclair Research; Thorn EMI; Shell

Automatic Programming; expert systems; and advanced robotics.

"We see no objective more important than making computing power more readily available to end users without the intervention of a hierarchy of systems analysts, programmers and operators," said Michie.

France puts cash into micros

by Jack Gee

The French government has announced programmes involving expenditure of FFr3 billion (£240 million) to develop integrated circuits over the next five years and FFr800 million (£64 million) over four years for passive components.

Industry minister Laurent Fabius said after a Cabinet meeting that President François Mitterrand had given the go-ahead for a new effort in the components field in the framework of the five-year electronics plan (Filière Electronique).

quest which runs from 1982 to 1986.

The plan requires French industry to achieve a trading balance in integrated circuits, become independent of foreign supply and technology, and create 1,000 new jobs within three years.

The government, which pins its hopes of success on France's two principal manufacturers, Thomson and Matra, is convinced that the entire electronics plan will collapse if these objectives are not attained.

The government has assumed responsibility for financing two-thirds of the investments required for research and development, estimated at FFr3.4 billion (£275 million), and for manufacture. These are reckoned at FFr2.2 billion (£180 million).

Production by French and foreign firms in France must rise from FFr1 billion (£80 million) in 1982 to FFr4.6 billion (£370 million) in 1986 in constant terms, to allow for the growth of the market by the end of the five-year plan.

Thomson, including its own factories and those of its subsidiary, Efets, and Eurotechnique, which it acquired from glassmaker conglomerate Saint Gobain last year, must increase output of integrated circuits from FFr370 million (£30 million) in 1982 to FFr2 billion (£160 million).

Matra Harris Semiconductor, in which Matra has a 51% stake, and Harris has a 49% stake, has a target of FFr1 billion (£80 million) in 1986, rising from FFr50 million (£4 million) at the start of the plan.

SPOTTISWOODE and RUBIN... Second-line support.

Dealers gain new support

by Claire Gooding

MICROCOMPUTER dealers are to get their own independent support from a new City of London company, Trinity Resource Ltd. Trinity has been formed to give second-line support not to end users, but to dealers, who often find themselves inundated with technical problems they can't solve from end users who have nowhere else to go.

The idea behind Trinity is to solve the main problem of software distribution: too many packages and not enough support for any of them. Trinity's team, led by Steve Rubin, has selected a small group of packages in a variety of areas. None of the packages compete with one another, although there might be top-of-range and entry level products in the same area, such as accounting.

"Our job will take more than 30 days," said Trinity Resource director Claire Spottiswoode. "If asked, we'll provide a spec and set up the dialogue with the customer. Then we'll go and code. The whole process from enquiry to sale should take about six weeks from beginning to end."

Trinity Resource is specialising in the more complex packages in the upper range of business software.

First attempts will centre on the ICL Personal Computer dealers, who are already queuing for Trinity marketing service. "The major advantage in starting with the ICL PC is that it's a small market, and the marketing resources are thin on the ground," explained Spottiswoode.

Managing director Steve Rubin chose the catalogue of products for the Trinity marketing service based on his experience with the company's parent, Parc and Lench, an ICL Trader Point dealer.

School head makes hunger strike protest

by Jack Gee

GUY Leclerc, headmaster of a French private college, has gone on a hunger strike in protest against the government's refusal to help him finance classes in information technology.

Leclerc, a former Roman Catholic priest, whose brother Edouard Leclerc heads France's most successful group of discount supermarkets, said he would continue to refuse food at Saint Louis de Chateaulin College, near Quimper, Brittany, until the Ministry of Education gave way.

"I have 21 pupils enrolled for

this computer science class," said Leclerc. "It is an important step forward, because the class will offer opportunities for technical training in the computer industry."

The headmaster added, "The local authorities are breaking the law in refusing their support, because they are required to support ventures of this type."

The former priest - five of his brothers and sisters have entered the Church - is inspired by the local authorities' breaking of the law in refusing their support, because they are required to support ventures of this type."

Guy Leclerc's hunger strike has helped to underline the shortage of computer specialists in France. The government last week announced that it is opening new classes in universities and training schools to turn out more teachers, engineers and technicians to meet a serious lack of personnel.

Secretary of state for education Roger-Gérard Schwartzberg, said France plans to train 100,000 teachers to give computer classes in high schools by 1984.

The Defence Ministry has released 400 engineers this autumn from their 12-month stint of national military service to enable them to give computer initiation courses to 10,000 unemployed youngsters. Over 1,500 engineers volunteered for this task.

French transcripts are paid £35 a month. Those detailed for teaching will get \$180.

The government also announced last week that it will give FFr15 billion (£1.2 billion) cash support to the electronics and computer industry this year. Industry minister Laurent Fabius said state aid will total over FFr10 billion (£800 million) in 1984.

Meltek

THE WORD IS FILTERING THROUGH

We can't keep it quiet any longer. When it comes to computer spares like filters and heads - Meltek Data is unbeatable. We carry new replacement air filters and heads for almost every make of disc drive and we operate what is probably the most efficient disc head exchange and refurbishing service in the industry. We also stock a wide range of quality recording media, and we invariably offer immediate delivery for most items in our extensive inventory. It's no secret that our rapid growth is a reflection of our strong product knowledge and a genuine understanding of customer needs.

Ferranti wins Swiss airport deal

According to the government's presentation of the cost of the integrated circuits plan, it was clearly underfunded to the tune of FFr3.6 billion francs (£325 million). It is not clear whether last week's announcement of government cash means a genuine new injection of finance.

Thomson, including its own factories and those of its subsidiary, Efets, and Eurotechnique, which it acquired from glassmaker conglomerate Saint Gobain last year, must increase output of integrated circuits from FFr370 million (£30 million) in 1982 to FFr2 billion (£160 million).

Matra Harris Semiconductor, in which Matra has a 51% stake, and Harris has a 49% stake, has a target of FFr1 billion (£80 million) in 1986, rising from FFr50 million (£4 million) at the start of the plan.

Thomson is still waiting to collect the FFr150 million (£12 million), which the government had promised it for taking over Eurotechnique from Saint Gobain.

Production by French and foreign firms in France must rise from FFr1 billion (£80 million) in 1982 to FFr4.6 billion (£370 million) in 1986 in constant terms, to allow for the growth of the market by the end of the five-year plan.

Lotus program is an instant hit

By Nuala Moran

LOTUS 1-2-3, an IBM PC program which has sold 60,000 copies in the US since its launch six months ago, is now available in the UK. And between 500-1,000 copies have been sold in the two weeks it has been available.

Written by Mitchell Kapoor, the creator of VisiTrend and VisiCorp, 1-2-3 combines spreadsheet, analysis, graphics and information management. It is the only product of the Lotus Development Corporation, a software company set up by Kapoor about a year ago.

According to Chris Morgan, Lotus' vice-president of communications, 1-2-3 is designed to be used by both "newcomers who have never had exposure to hardware or software" and by power users adept at using software."

The UK launch for 1-2-3 has gone to Reflex, which is also a new company. It was set up six months ago by John Weatherhead, formerly with the distribution company Rapid Recall. Weatherhead is confident that 1-2-3 will get a large slice of the IBM PC market here.

"There are between 20,000 and 30,000 IBM PCs in the UK and we expect at least 70% of this market to go to Lotus. We could go as high as 80-85%," he said.

Lotus has also established a UK subsidiary. At the moment it is sharing facilities with Reflex in Reading. The two companies are currently sharing responsibility for supporting 1-2-3 but firmer lines of responsibility will be drawn once a full management team is established at Lotus UK.

Over half the IBM dealers in the UK were trained for 1-2-3 before the official launch. Dealer kits are available which include a preview version of 1-2-3 on disc, a tutorial disc, a demonstration disc and a keyboard template.

Plans are in hand to adapt 1-2-3 for Texas Instruments' personal computer, the TIA-1. Rainbow, ACT's Victor and the Wang personal computer.

Morgan said that Lotus would also consider adapting 1-2-3 to machines that are popular in Europe but not in US. The company estimates that around 30-50% of its market will be in Europe.

European language versions are planned and Lotus has had talks on setting up in France and Germany.

Sord plans to train world's industrialists

By Tom MacSweeney

SORD is planning to develop hardware and software specific industrial training which will be marketed worldwide, according to the company's founder and president, Tadeuszki Shima.

Plans are in hand to adapt 1-2-3 for Texas Instruments' personal computer, the TIA-1. Rainbow, ACT's Victor and the Wang personal computer.

Morgan said that Lotus would also consider adapting 1-2-3 to machines that are popular in Europe but not in US. The company estimates that around 30-50% of its market will be in Europe.

European language versions are planned and Lotus has had talks on setting up in France and Germany.

EEC won't enforce compatibility

WHILE supporting the idea of compatibility in computer equipment, the EEC Commission is not prepared to go to the lengths of introducing rules requiring manufacturers to give advance information on interfaces.

This was made clear at the September session of the European Parliament in Strasbourg when the Commission gave a written reply to a question from Dublin Euro-MP, Richie Ryan.

He argued that public interest required "the widest possibility of connecting into computer systems, processors and other plug compatible elements."

And he asked: "Will the Com-

Harris adds supermini

By Keith Holder

HARRIS Systems has unveiled the latest addition to its supermini range which, it claims, will outperform Digital Equipment's VAX 11/780, IBM's 383 and Prime Computer's 9950.

The Harris 1000 operates at four MIPS and is designed for scientific and commercial applications requiring high performance including data acquisition, university research, product design and CAE.

"The system offers many price performance advantages," said UK general manager Frank Waller. "By comparison, its performance is up to three times higher than a VAX 11/780 and twice that of a Data General MV/1000 at comparable prices."

Entry level cost for the system is £210,000 and orders will be accepted now for delivery next spring.

The computer owes its speed to a new 100K family of emitter-coupled logic integrated circuits which allow higher switching speeds. Norman Swales, Harris director of hardware development said: "Many competitors quote very high MIPS numbers, but reach them with multiple processors. Our design, using ECL, speeds, only needs one."

Not everyone is convinced, and Malcolm Hoar, marketing manager for Prime Computer said:

"MIPS is a very limited measure, it is not how high you can get but what you do that really counts."

Hardware features for the computer includes 48 Mbytes of virtual memory and optional 32, 48, 64 or 96-bit architecture.

Richard Drake reports on the BCS object-oriented software conference

How Lisa taught Apple a lesson

LARRY Tesler, the inspiration behind Lisa's revolutionary user-interface, spoke in London last week about the lessons Apple had learnt from the massive development effort that created the Lisa.

He was speaking in London at a packed British Computer Society conference on object-oriented software.

"I suppose we prided you could create the most up-to-date object-based interface using a non-object oriented language," he told delegates, but admitted that there had been drawbacks.

Different teams approached the same user-interface issue in subtly different ways, and the eventual much-praised consistency was difficult to achieve.

From now on, he said, those problems would not arise, thanks to Apple's new object-oriented development language Clascal.

The addition of classes to Pascal allows software houses to write applications that reside in windows on the screen exactly like Apple's own software.

And Tesler claims that, contrary to expectations, programs written in this way actually run faster than by conventional methods.

Four object-oriented products were displayed at the conference, including VisiCorp's VisiOn and the seminal Smalltalk-80 system from Xerox.

All the speakers acknowledged the contribution of Smalltalk as the fullest expression so far of the object-message metaphor applied to software systems.

Smalltalk was developed by a team of researchers at Xerox Park, Palo Alto, during the last 10 years.

One of the leaders of the group, Dr Adele Goldberg, said that although its research goals were not fully achieved, it had decided to release Smalltalk-80 to allow

hardware designers to trial object-oriented concepts.

Smalltalk's remarkable speed and its use of a mouse strip device allow for very fast development and debugging.

All parts of the system, including the process you are using, are objects that can be inspected at any time.

Tesler, who originally worked with Dr Goldberg at Xerox, said that to compare Smalltalk with ordinary languages is "trying to compare apples to oranges".

Details remain, however, as Smalltalk's performance as a personal microcomputer hardware.

Dr Brad Cox of Products

Products Inc, described his company's Smalltalk-80 system as "a hybrid approach to the one used by Apple".

According to Dr Cox, it combines the flexibility of object-oriented programming with the efficiency of a conventional compiled language and, with Objective-C, can be run on a number of common environments, including Unix.

All the speakers agreed on one thing, that the time is ripe for the introduction of object-oriented approaches.

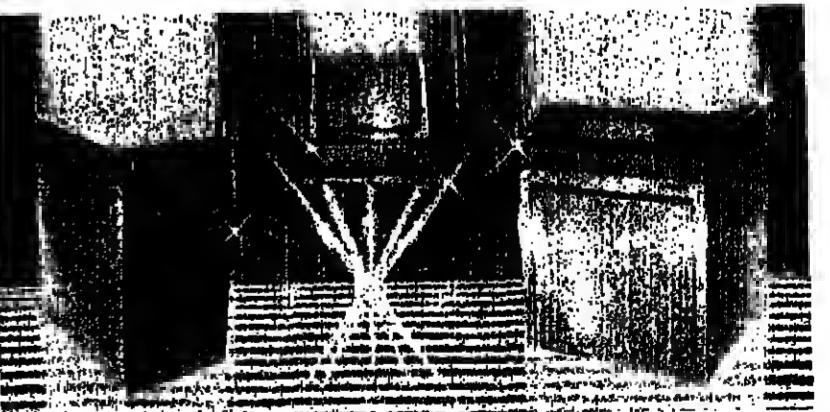

The more 40,000 lines of Smalltalk-80 compared to 10,000 in Unix showed the potential economy of object-oriented design, Dr Cox said.

Whether other hardware manufacturers will follow Apple's lead in producing a machine dedicated to this type of software remains to be seen.

But many observers felt that presence of 15 delegates from IBM and ICL at this conference may just be extremely significant.

COMMUNICATIONS

Distributed Data Processing is our business; communications our strong-point.

When you choose a Northern Telecom DDP system you're also getting a telex, terminal, wordprocessor, mail-box - you name it. And you're getting closer to the automated office.

Compatibility is our watchword - from hardware, software and communications, to the way you use them. Our versatile range of systems allows you to build and develop a network to suit your needs and run your business more smoothly and efficiently.

The common operating systems gives you free movement of resources around the network. Thanks to our computer expertise and telecommunications know-how, you can communicate both inside and outside your organisation - without leaving your desk.

Northern Telecom is one of the world leaders in this field, with vast resources. We design and manufacture our equipment, and back it with software and support services close at hand throughout Europe. You can depend on our commitment to your growth.

So if you want a professional DDP system, and you feel the urge to communicate, start talking to us:

US Navy boosts Planet local net

by Caroline Burgess

A US naval supply centre has ordered the UK-designed and manufactured local area network Planet from Racal-Milgo in a deal worth \$4.2 million.

"It is our biggest individual order to date and we are delighted," said Tim Holley, Racal-Milgo managing director. "It is significant - to supply the US Navy with a UK product."

Earlier this month Racal-Milgo marked the first anniversary of the launch of Planet with the announcement of major new enhancements to the system. Orders valued at about \$4 million were placed in the first year - before the US order.

The enhancements include a compact card nest allowing terminal access point for up to 64 individual ports, easy access to Planet for PABX users, two protocol converters and a single-port TAP operating at data rates up to 64Kbps per second.

"The market for local area networks is poised to take off worldwide into a multi-million pound business," said Holley.

"Today every child is being taught how to use a computer. And when they get into the world of work they will expect to have some form of keyboard device."

"The self-healing capabilities of Planet will allow vital communications links to continue on a badly damaged ship. It will also reduce the amount of heavyweight cabling needed on board."

It is being predicted that by the early 1990s there will be one workstation per office worker. Racal-Milgo sees the local area network as the fastest growing

market, claiming that it is set to grow by a factor of more than 100 by 1987.

Planet's flexibility and self-healing capabilities are seen by Racal-Milgo as its prime selling points.

The ability of Planet to withstand a failure of any of its components or a break in the cable is leading to developments for use in the defence field. "One of the lessons learned from the Falklands campaign was the need to maintain communications on board a vessel damaged in battle," said Holley.

"Today every child is being taught how to use a computer. And when they get into the world of work they will expect to have some form of keyboard device."

"The self-healing capabilities of Planet will allow vital communications links to continue on a badly damaged ship. It will also reduce the amount of heavyweight cabling needed on board."

It is being predicted that by the early 1990s there will be one workstation per office worker. Racal-Milgo sees the local area network as the fastest growing

HOLLEY... "Poised for take-off into multi-million business."

TRICKETT... "Nothing gets carried through in UK".

Trickett quits for top US job

by Keith Holder

KEITH TRICKETT, one of the men behind Digico, and former managing director of Compdata, has quit Britain to become Gerber Systems' vice president of sales-marketing in the US.

The move follows speculation that he was forming a new CAD/CAM house in this country with Dr Norman Schofield, ex-technical director at Compdata.

This fell through, said Trickett, "because we couldn't raise funds at reasonable terms. The venture was not going to be small and I was

not about to start on a shoestring budget.

"The trouble with this country," he continued, "is that we are very good at inventing things but the financial services are slow to back something new and nothing gets carried through."

His position at Gerber will give him responsibility for exploitation of technology, mainly in mechanical and chemical applications, using a "small dynamic group".

He said the size of Gerber, combined with the relative autonomy of his group, had figured strongly

in his choice to join, "Besides which the US is currently a centre of activity".

Asked what he thought of the Cadence plan to move into the US market, he replied, "It's difficult to know what they have to do with technology - they're not really aware of the software tools developed through."

Despite the move and his optimism about the US scene Trickett added: "I haven't torn up my British passport yet."

UNIX and 'C' Courses

Bleasdale Computer Systems, the UNIX Systems Company, offers the following courses which are presented by leading European UNIX experts.

The UNIX management overview covers the development and features of UNIX, its applications in areas such as networking and office automation.

The technical workshops are highly practical, with each course attendee having their own terminal for practical work.

120,000

CIRCULATION

Now puts
Computer Weekly head and shoulders
above its competitors

Computer Weekly has always been the best read journal in the business for reaching key job-hunters and purchasing decision makers at all levels.

Now it's even more widely read, with a circulation of 120,000.

And that's not just the biggest circulation, it's also the most accurately targeted.

But just because our circulation has shot up, it doesn't mean our advertising rates have. And Computer Weekly still gives you the shortest display copy dates.

This month sees the launch of a new colour supplement that'll make Computer Weekly even more attractive, both to our readers and our advertisers.

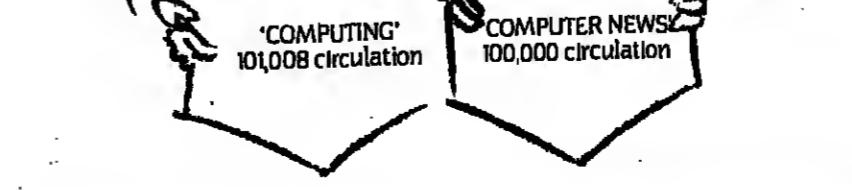

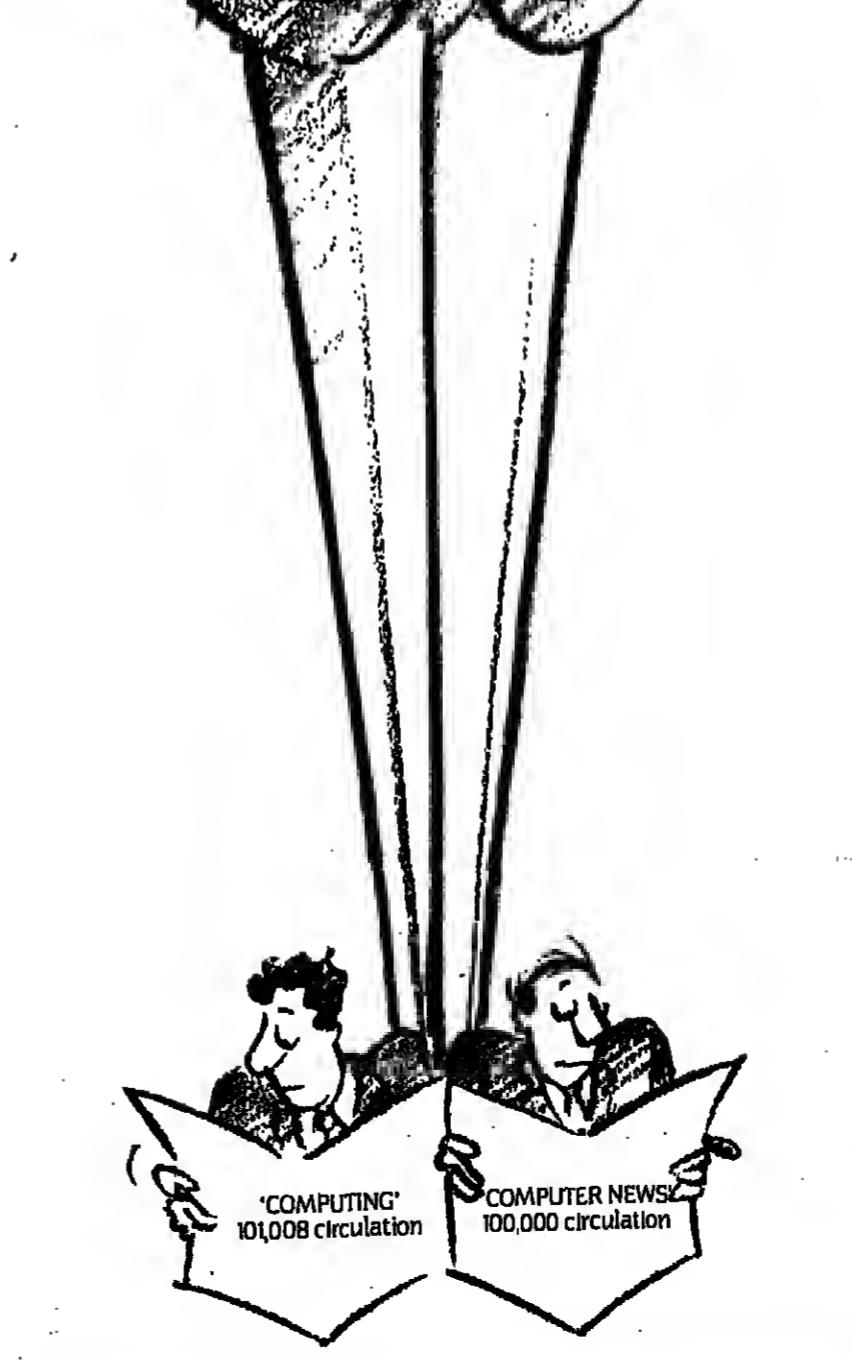

It's called Management Review Printed to exacting standards on coated stock it will add a nice touch of gloss to any campaign.

For more information on display advertising call Harry Hutson, Advertisement Manager on 01-661 3102. For recruitment advertising call Shobhan Gajjar on 01-661 8080.

They'll put your advertising head and shoulders above its competitors.

World's programmes receive a once-over

John Riley reports on the progress of computing towards the fifth generation

ABOUT 160 delegates, mainly from computer companies in the UK, last week took a long hard look at the world's current long term programmes to move computing into the next generation. The occasion was SPL Insight's second Fifth Generation World Conference held in London.

Heads of the three most highly focussed IT programmes, the Japanese Fifth Generation Project, the British Alvey Programme and the European Esprit Programme, gave accounts of progress so far. There were also presentations on the more scattered US, German and French initiatives.

Although largely descriptive, the papers generated lively discussion about the approaches, aims and techniques used in each programme.

Discussion centred around the need for logic programming, the knowledge based systems research, whether sequential machines should be abandoned

That view was contested by Fuchi, who said he believed that logic programs were important because of the need for new architectures, which were parallel rather than sequential. "If we base all software on logic based languages, then we make software engineering much easier," he said.

Practical examples of how rudimentary knowledge bases are being applied in Japan were provided by Shigeru Sato, deputy general manager of Fujitsu's Computer Systems Division. His presentation and timetable of developments were broadly similar to an outline of Toshiba's programme given to the IFI '83 conference in Paris last week by Kenichi Mori, manager of Toshiba's Information Systems Laboratory at Kawasaki.

Both companies are broadly in step in their developments of pattern recognition, character recognition and speech recognition systems.

Feigenbaum hit out at the Alvey Programme for being too dispersed physically. "A national centre for IT should be possible in a small island." He also criticised it for not being concentrated enough, with intelligent knowledge based systems not being given a large enough share; for an overemphasis on Prolog; and for weak university/industry ties compared with the US.

Another serious problem he drew attention to was the "missing generation of UK talent - which is in the US", because of salary differences which are a factor of two to three times greater than in the UK and better facilities.

British also needed a "technological hero" of the second computer age", who could lead the programme. "You need both a chief surgeon and a hospital administrator," he said.

Above all, however, Feigenbaum concluded, Britain needed the will to succeed. He contrasted the healthy respectability of artificial intelligence in the US scientific establishment with the lingering "feeling of virus" of the Lighthill Report a decade ago, which stamped on artificial intelligence and the important pioneering work being conducted by Donald Michie in the subject.

The European response to the Japanese Fifth Generation programme, Esprit, was described by Horst Huenke, director of the microelectronics programme in the European Commission's IT Task Force. The 1980 million project still has to gain financial approval.

According to Henke, it had "all the political will" it needed to get through. The one-year pilot project in advance of the main programme had already been selected and begun.

He added that he was offering co-operation not from a position of weakness but from one of strength. "It is not only my personal opinion, the people within MITI now also want to make research open to the world."

Kuniro Murakami, head of one of ICOT's research laboratories, outlined progress towards producing a software supported development system at ICOT. It would comprise a relational data base machine (Delta) and a sequential inference machine (PSI), a Prolog work station) which were both scheduled for completion next year.

Fuchi confirmed that when the two machines are linked in 1985, the work towards developing automatically generated software, which currently had a handful of people working in that area, would be considerably expanded.

Feigenbaum, reviewing the Japanese progress, considered that they had shown a "better than usual learning curve", and although progress towards the PSI had gone more slowly than expected, the work in the other areas had gone more quickly.

Feigenbaum hit out at the Prolog language, which is the basis of the Japanese machines, arguing that too much adherence to Prolog was risky, because it was not yet a proven language. "The vast amount of know-how attached to Lisp will have to be relearned," he said.

developmental, and semantic search projects. "For research-planners, there are flowers blooming in many different places," said Odey & the French programme.

The US is not responding specifically to the Alvey programme, but Feigenbaum formed the conference of developments in artificial intelligence underway.

The most important of the inappropriately named electronics and Computer Technology Corporation (MOC), is a research organisation funded by a consortium of US companies, including Equipment, Control, Honeywell, NCR, Sperry, Motorola, NatSemi, Harris others to compete with IBM.

The programme is under way in the US. Microelectronics, VLSI, micro-aided design, software productivity and some Fifth Generation activity, such as artificial intelligence, knowledge based systems and image processing.

Another major US programme underway is the Army's Advanced Research Project. The agency funds research, mainly for defence, and the bulk of the cash is for military applications of artificial intelligence technology.

"Super speed is the goal," Feigenbaum, pointing out that was necessary for piloted and missile systems.

Feigenbaum affirmed the US is determined that the market share of the computer industry does not slip to Japan, but that it is concerned about the US' Esprit initiatives.

The European through more credible with a densely well organised EEC and co-operation," he said. "The dissemination of intelligent companies."

Donald Michie, professor of machine intelligence at Edinburgh University, and a pioneer of knowledge based systems in the UK, announced that he had an independent research establishment, funded by independent associated with Strathclyde University.

The running debate was use of logic languages. "We make the distinction between programming and Prolog," Robert Kowalski, professor of computing at the Imperial College of Science and Technology, University of London, who was the developer of Prolog, said. "Prolog is a good reason that Prolog is popular, it is so bad. It has a great future."

Michie added: "We have Prolog junkies, but for business the first version is best written in Prolog and then in Pascal or C, which is suitable in the commercial customer."

The other debate is parallelism. Fuchi defended move towards parallel architecture. "It's obvious," he said. "We need much more power of systems are to become popular in everyday life. We need a powerful machine, and we need to get lower cost, and we need to get larger integration, not just speed. Device technology and parallelism."

Summing up the whole fifth generation approach, Fuchi added: "We are just starting that a parallel machine is good in the future. We need to do research to determine which architecture is best and most in the alternatives - we are open."

MICRO NEWS

EILENBY . . . "Expensive - and it's going to stay that way."

Grid trains its Compass on European market

Grid Systems, Californian seller of up-market portable micros, is moving on Europe. It has set up an international marketing division under Yorkshireman Roger Higgins, and is recruiting dealers for the \$8,000 micro Grid Grid Compass computer.

It's high time we came into Europe," says chairman and founder John Eilenby, also an expatriate Englishman, firmly settled in California. "We have State-side customers who want us to."

He sees initial European sales coming from subsidiaries and parents of present Compass users in the US.

There are small numbers of Compasses already in Europe, but Grid's push into European offices and briefcases has been waiting on proper support facilities. These are now coming into place and the European operation should be running in the first two months of next year, says Higgins. The UK, Germany and France will figure as the big markets first.

Good looks are not all the machine has going for it. It has an 8086 processor, with an 8087 to beef up arithmetic handling, with 32K of RAM and 384K of bubble memory. External floppies and Winchester - slotted to fit a briefcase with the basic unit - are available for local mass storage. Extra file space comes through Compass Central, an 80186-based hub for a network of 32 Compasses, and connection to mainframes.

He sees initial European sales coming from subsidiaries and parents of present Compass users in the US.

Grid's own Compass Computer operating system, GridOS version 2.0, converts data from spreadsheets to an array of graph types, gives useful data and database tools, and handle data communications.

Communications are very much part of the Grid system's offering, allowing users to plug into remote data sources through phone lines. PCs machines have built-in modems and have a telephone handset as an optional extra. Eilenby has been talking to the UK's Broadcast Approvals Board for Telecommunications.

"In the UK, we are just in time to catch the wave of radical telecommunications improvement," says Eilenby. "There's an awareness of openness."

Four-year-old Grid has now been funded to the tune of \$30 million.

Some software systems are like walk-in closets—they're usually kept standing offstage. But not SPSSX.

Because SPSSX offers everything you need to organize, summarize and display the information in your data in predictive ways. To a full new dimension. In fact, a system which we've designed with the most advanced graphical capabilities yet. To play a leading role in any DPC (Data Processing Center) environment.

SPSSX offers the performance of a mainframe, the reliability of a minicomputer, and the convenience of a microcomputer. All in one system. All in one software package.

SPSSX is the critical information that you need. The system takes users to a place beyond the limits of conventional software. To a place where the possibilities are limited only by your imagination.

SPSSX is the system that's designed to help you make the most of your data. To help you make the most of your system. To help you make the most of your company.

SPSSX is the system that's designed to help you make the most of your data. To help you make the most of your system. To help you make the most of your company.

IBM adds another package to its PC

by Claire Gooding

IBM HAS added another candidate to its approved range of accounting systems for its Personal Computer. The General Accounting package comes from US software house BPI International and is aimed at small businesses which need a versatile system to deal with sales and purchase ledgers, VAT and balance sheets.

The system joins Peachtree's accounting package, with which it will be in direct competition, although both are under the IBM label. General Accounting sells for £351 and Peachtree's package for £350 a module. There are five modules.

"General Accounting is sold as an entry-level product in the US," said Michael Hunt, UK managing director of Peachtree's parent, MSA. "Obviously it will take some

HUNT . . . "Obviously it will take some business from us."

business from us, but IBM will price it according to its capabilities. If price is a consideration buyers will look at General Accounting, if not they'll look at Peachtree's package.

IBM has made considerable adjustments in the package to suit the UK market. Terminology and documentation standards have been Anglified and UK formats used for profit and loss ac-

counting, VAT, and accounting periods.

Other adaptations have allowed the package to cope with multiple bank access and auxiliary tables for UK-specific factors such as tax.

Computing, VAT, and accounting

periods.

systems in the UK. A third alternative system used by 25% of the top 1,000 companies in the US is coming to Britain.

Management Decision Systems, developer of the Express system, is setting up shop in Slough and will offer standalone systems, networking and support.

The IBM compatible modelling system is designed for managers in business planning and policy and uses a "plain English" format to encourage use.

It has been selling steadily in the US for 10 years, particularly to large banking houses and corporations, including Atari, Westinghouse and Xerox.

New additions to Express include a link which allows an IBM PC to be used as a workstation via a mainframe interface called Express-Mate. An integrated package gives users access to the Lotus Development "1-2-3" data base management, and graphics software is designed to widen market appeal.

Costs for these are £430 and £395 respectively.

This will compete with other multi-dimensional modelling systems like the MSA Peachtree and BISI's equivalents. It's a limited version suitable for stand-alone micro systems.

Already aware of the threat to sales, MSA is developing a new line of similar software to Express. A spokesman for the company said that it could be launched before the end of the year.

Although developed to run on IBM machines, an agreement has been reached with Prime Computer to supply stand-alone models.

Prime signs Delta for IBM battle

by Claire Gooding

THE Delta applications generator has been signed up in the push by minicomputer manufacturer Prime to "surround" IBM kit. Prime has been expanding its software offerings for some time as part of its plans to beef up its marketing in the UK.

Delta, from Delta Software Tools, is a highly adaptable system which is capable of producing software on its host machine for a target system of a totally different make and operating system.

It is said to automate software production so that coding is reduced by more than 70% and the entire systems development effort by as much as 50%.

Delta has been used extensively on mainframe sites and by soft-

ware companies in large conversion tasks, and one of Prime's motives in adopting the system is that it will enable Prime kit to become more versatile.

The joint marketing agreement applies specifically to Prime's entry level machine, the Series 50. The Delta product was originally developed on Prime kit but it has taken a long time for Prime to recognise its significance.

Delta will be used to develop mainframe software on the entry level 2250, to relieve the load on the mainframe and supply a cheaper alternative to expanding the mainframe.

Delta Software Tools will be providing the support for the system from its London office. The price for a basic Delta licence is around £25,000, depending on the number of terminals.

The database works under the VOS operating system and costs £28,500.

Software File is compiled by George Black

Harris takes the Oracle

SUPERMINI manufacturer Harris is the latest to adopt the Oracle database for its machines. Oracle is one of the first relational databases to win wide acceptance among manufacturers in much the same way that the Cimcon Total permeated through the hardware scene in the 1960s and 1970s.

Brook believes that the ideal of taking software development off the mainframe and on to Prime will be very attractive to many installations because of Prime's extensive networking and terminal support capability.

Everybody complains about programmer productivity," said Bob Brooks, managing director of Delta Software Tools, "but a lot of the

work

is done

on the

mainframe.

The system uses the IBM query language SQL/DB as its user interface, uses data dictionary storage in which tables can be added to or deleted without affecting applications and is written in the Unix language C.

The database works under the VOS operating system and costs £28,500.

ADA

Michael Pickett, senior Ada consultant at the CAP group, begins a monthly series about Ada developments

Ada's critics should not go unheeded

ADA shouldn't have been invented. It's a widely held view, and there are many who would seek to justify it by pointing out the deficiencies of its various features; their presentation; the complexity of using them; and the dangers inherent in their use. Sometimes alternative solutions are proposed for particular features or for the language as a whole.

Without Ada, there would have been many more debates, which might have continued indefinitely. Even with Ada, the opportunity to observe its use in practice, debates will continue and the evidence will be disputed. Hence there will continue to be ammunition for those who claim that Ada should not have been invented until the issues had been resolved.

Probably one of the most serious objections of this type comes from methodologists. The argument is that the greatest contribution that thinking man can make to programming is to instil order and method.

The need for a reliable, usable program development method is beyond dispute, but to delay the development of the programming language until such a method is developed is unthinkable. On the contrary, as was shown by the

This is where the effort is needed. Develop the right method, and when it is known what is the right way to write programs, then, and only then, invent the language to support the method.

Programming methodology has made great strides in recent years, but it would be wrong to suggest it is a new thing. Even in the early days there were those who were acutely aware of the limitations of whiz-kid programming and sought reliable ways to develop larger systems. Serious and embarrassing failures taught much to many and added greater impetus to the search for a reliable method. Now there are as many methods as programming languages, and as much debate about their attributes.

The need for a reliable, usable program development method is beyond dispute, but to delay the development of the programming language until such a method is developed is unthinkable. On the contrary, as was shown by the

PICKETT

based on these proposed runtimes, and now companies make use of these tools.

Once Ada is in use, it becomes an organisation, it becomes clear to identify what additional support is needed. Tools are developed that consider the needs of the organisation.

Concurrent CP/M allows you to execute four or more jobs

simultaneously, with real-time control.

Calling any or all of them onto the screen at a keystroke. Switching them at will.

Now, you can switch between a report generation task and a sales forecasting or financial modelling session, working on both while your computer plots a chart and collects data.

It makes sense to start now and to develop the tools they are needed, not to wait until the intended APSE is fully fledged.

Now, both computer and human throughput are multiplied.

management with multiple overlapped or non-overlapped windows. Integrated device-independent graphics with a large library of drivers for most popular graphics devices. Disk hashing and caching for high speed disk performance. Disk sector buffering and multi-sector I/O for ultimate disk performance. Full file and record locking. Password control. Full inter-task communications and synchronisation. Plus much more.

And it's all shipping now.

Who's running with

Concurrent CP/M?

Among the many machines with which it is available now, or

expected soon, are IBM PC and PC-XT,

ACT Apricot, DEC Rainbow 100, Future

Computers FX-20, Future Technology

Systems Series 8G, Fujitsu 1600S,

Olympia 'People' Computer, Selmer

PC-16 and TI Professional Computer.

The list of major manufacturers

Concurrent CP/M offers true real-time multitasking on your personal computer now.

Or you can wait and get the cop without the current.

Free with Digital Research's Concurrent CP/M — four or more fully active computers within the desk space presently occupied by your single 16-bit personal machine. That's what concurrent real-time operation effectively means.

It's the concept of the future, available today from Digital Research. In fact, Digital Research has over 9 months' experience delivering proven high performance concurrency, establishing the standard for the industry and continuously enhancing the technology.

Or, conversely, you can wait for the contribution of a catch-up company which does not yet possess the current technology. And risk disappointment as well as delay.

Realising the power of your personal computer

Concurrent CP/M has been achieved by directing leading edge technology upon a very simple truth: the 16-bit personal computer is a powerful and sophisticated machine fully capable of pursuing many lines of action in parallel with one another.

Concurrent CP/M allows you to execute four or more jobs simultaneously, with real-time control. Calling any or all of them onto the screen at a keystroke. Switching them at will.

Now, the way is open for fully integrated multi-program applications that will run on 16-bit computers, exploiting concurrent technology.

The Concurrent CP/M specification makes it easy. Real-time multitasking, ideal for communications and network control. Maintenance of virtual consoles for all tasks not mapped to the physical screen. Dynamic data window.

management with multiple overlapped or non-overlapped windows. Integrated device-independent graphics with a large library of drivers for most popular graphics devices. Disk hashing and caching for high speed disk performance. Disk sector buffering and multi-sector I/O for ultimate disk performance. Full file and record locking. Password control. Full inter-task communications and synchronisation. Plus much more.

And it's all shipping now.

designed, developed and marketed by

Digital Research. It is part of

continuous, compatible and evolving

performance growth path that

ensures a secure future for its users.

It is complemented by a powerful range

of software development tools and

graphics software. And, as with every

previous Digital Research advance, it

sets an industry standard which

others must attempt to follow.

Concurrent CP/M, you either

have it or you don't.

Now, the way is open for fully integrated multi-program applications that will run on 16-bit computers, exploiting concurrent technology.

The Concurrent CP/M specification makes it easy. Real-time multitasking, ideal for communications and network control. Maintenance of virtual consoles for all tasks not mapped to the physical screen. Dynamic data window.

management with multiple overlapped or non-overlapped windows. Integrated device-independent graphics with a large library of drivers for most popular graphics devices. Disk hashing and caching for high speed disk performance. Disk sector buffering and multi-sector I/O for ultimate disk performance. Full file and record locking. Password control. Full inter-task communications and synchronisation. Plus much more.

And it's all shipping now.

Who's running with

Concurrent CP/M?

Among the many machines with which it is available now, or

expected soon, are IBM PC and PC-XT,

ACT Apricot, DEC Rainbow 100, Future

Computers FX-20, Future Technology

Systems Series 8G, Fujitsu 1600S,

Olympia 'People' Computer, Selmer

PC-16 and TI Professional Computer.

The list of major manufacturers

offering Concurrent CP/M is getting

more impressive every day.

Designed for growth

Because Concurrent CP/M is

designed, developed and marketed by

Golden rule for 'soft' survival

CREDITORS of software house Altego, which ceased trading in April, met last Wednesday hoping for an insight into why such a leading organisation ended up with unpayable debts that were reported as exceeding £400,000.

This is not the only major software house to come to grief recently, and industry watchers are asking an obvious question: Why do apparently prosperous companies fail?

Probably the full story will never be told, but I suspect that, in common with my commercial venture, the roots of the problem can be found in poor financial control and the failure to apply one golden rule: that of making sure all work carried out is realistically charged for.

In the final analysis it all comes down to making a profit, for profit means the difference between staying in business and ending up in the hands of the Official Receiver.

Profits need not be spectacular, but they do need to be consistent — which can be achieved through a combination of a number of factors that can sensibly be applied by any organisation in the computing service industry.

Regardless of industry or area of specialisation, it is important not to have all your eggs in one basket. In other words, create and maintain as wide a customer base as possible. So if one — or dozens — move on, the company is not threatened by a substantial drop in revenue. At CMG we have about 5,000 customers throughout Europe.

Do not jump on the technology bandwagon. There is no point in offering solutions looking for problems. Put new technological developments under the microscope and ask how they can be applied to business needs; to solve business problems. What is the point, for example, of having an all-singing, all-dancing package if no one wants to buy it?

Making a profit also means making sure you set the right price for a product or service and know what every job is costing to compete, which in turn means using a first class costing and monitoring system, through which you can make sure customers are being billed enough.

This is a case of "physician heal thyself" in the computing industry. I am amazed at how few suppliers of computer systems actually use their own products to aid their business operation.

Doug Gorman

FROM COMPUTER WEEKLY OF OCTOBER 4, 1973: First winner of the John Player Computing Award was Professor Tom Kilburn, professor of computer science at Manchester University. Peripheral manufacturer Memorex would not be bailed out of its financial difficulties by Control Data, following a breakdown of negotiations. It was reported that the magnetic bubble memory would become commercially available by 1976, selling at a cost of about 0.05p per bit initially. The 1,000th installation of Librarian, a retrieval and maintenance system for IBM 360 and 370 source programs, was announced.

PROFILE

The volunteer who gets IT across to the public

ARRICK WILKINSON remembers 1968 as "the year all my problems started". His wife was asked to join the committee of the Glasgow branch of the British Computer Society.

She got out of it by nominating her husband instead.

Since then Wilkinson has been branch chairman, BCS graduate and student affairs committee chairman, a member of the BCS awards panel and an the membership committee and council. He has been chairman of the Digital Equipment UK users association, Decus, since 1978, and European chairman for the last three years.

He has also chaired a society which raised £300,000 to renovate an ancient granary and turn it into

by John Kavanagh

a theatre and crafts centre. And he sits on the Association of Arts Centres in Scotland.

All this work is voluntary. Between meetings he manages to fit in a full-time job as computer manager in Glasgow University's natural philosophy, or physics, department. He runs a DEC Vax 11/780 and is responsible for several PDP-11/23s used for data acquisition.

Wilkinson is walking proof that meeting people broadens the mind. Through all these activities, which demand a meeting a week on the computing side alone, he has sorted out firm views on the industry.

Avoid letting external investors into the organisation. Even if they have a minority shareholding they will want to influence the business, despite the fact that they may have little or no knowledge of the computing industry and its constraints. They may be more interested in short-term performance and the effect on dividend rather than in building a stable and expanding operation.

If you decide to grow through acquisition, choose very carefully.

We look for organisations that may well be financially weak, but they must otherwise be reasonably stable and we expect to see them turning a profit within three years.

We thought, for example, that we might have lost 50% of customers at Incomptuer but in reality the loss was marginal.

When we took over the company was losing money but it has now been turned round. This year it will break even and in 1984 will contribute to group profits.

Here, the investment needed was not so much financial but rather more of an investment in management.

It all sounds remarkably sensible, doesn't it? But consider for a moment whether your own organisation can honestly say that it applies all the criteria outlined. And then ask yourself whether any organisation that wants to stay in business these days afford not to take financial control seriously.

Doug Gorman

DOWNTIME

Time gents please!

READERS will be aware of my hatred of computers out of hours. These little horrors crop up everywhere these days and generally "improve" the quality of life by several negative orders of magnitude.

Talking ears and vending machines, no-hope rock bands appearing on *Top of the Pops* as microchips produce identikit music for them, and computerised switchboards which play muzak at you at the drop of a hat — are all to be deplored.

But new levels of bureaucratised depravity will have been plumbed when a device known as Robo Till hits the streets soon. Robo Till is designed to monitor beer lines and

optics in hotels, and pubs and to deliver exact measures and prices.

The one remaining quality of life which still exists, at least in the Dog and Bucket, my local, is that

Cheers.

I SUPPOSE IT'S A SIGN OF THE TIMES... I WENT TO A PARTY YESTERDAY... AND EVERYONE'S "PARTY PIECE"...

... WAS ANOTHER VERSION OF "SPACE INVADERS"...

BRIAN Oakley, director of the Alvey Programme, is establishing a reputation for his wit. At the Computing Services Association quarterly luncheon last week he said we will go "eggling in the sea" if we don't meet the challenge of the Japanese Fifth Generation. His assessment of the Japanese and the British approach to problems showed the same spark: when the Japanese agree on a plan, they

can all face in the same direction to solve the problem; the British agree on the plan, but then go in the same direction themselves.

And Mrs Thatcher thinks the Alvey Programme is being run by one man and a girl. "I'm not sure Oakley," she thinks, "is a good example of the Japanese Fifth Generation."

Checkmate for chess champions

CHess mastery was regarded as one of the highest accolades of the intellect - until computers started playing the game so well. Now it has sunk to the intellectual level of noughts and crosses in our imagination, a game computers can play as well as, or better, than we can.

The latest blow for computer chess was struck last month at Munich when world champion Anatoly Karpov was held to a draw by a mere chess machine costing just £25k, the Mephisto III.

Karpov admittedly was playing 20 other games at the same time, and even world champions can slip up in such conditions. But the development is still significant because until recently it has taken powerful mainframes to play chess at a level likely to give Karpov cause to ponder.

Until 1979 chess international master David Levy, one of the world's leading authorities on computer chess, had not been beaten by a machine. Since then he has been beaten twice, and now for the first time it looks as if there are dedicated chess-playing computers at affordable prices capable of besting chess masters.

Open plan may not be the way to programmer productivity.

Programmers' private world

THE trend toward open plan offices could be reversed by a recent US experiment in programmer productivity. TRW, which produces 10 million lines of code a year, moved 35 of its programmers into small soundproofed private rooms without windows, but well loaded with expensive computing facilities.

Productivity soared by 40% in the first year of the experiment.

The company was surprised by the reason the programmers gave for their better performance: apparently they found the quiet, privacy and comfort conducive to grinding out the code.

And anyway, if the only window on the world is a VDU, you will look at it.

I am not surprised. The conventional wisdom is that people work

better in open offices. The programmers are a breed apart. Many of them resent any interruption during a hard debugging session at the terminal, and some feel inhibited by a large human presence around them.

And anyway, if the only window on the world is a VDU, you will look at it.

Third party service is 'failing'

by Keith Holder
THIRD party field service organisations are failing to get their message across to potential users, despite their increased capability, says a report from Input, *Developing User Acceptance of New Service Techniques*.

The report examines the strengths and weaknesses of remote diagnostics, central dispatch, carry-in service, mail-in service and customer assisted maintenance and analyses users' responses and suggestions for improvements.

Doug Eleyons, director-general of the Computing Services Association, thinks the report is on target and comments: "I would strongly endorse what it says. There is a huge expansion potential in the market."

He doesn't think poor marketing is the only thing to blame. "There is also a credibility and educational deficiency to

overcome," he commented. "The problem is how to show the data processing manager that services from third party organisations can be just as good as those offered by the original manufacturer."

The report examines the strengths and weaknesses of remote diagnostics, central dispatch, carry-in service, mail-in service and customer assisted maintenance and analyses users' responses and suggestions for improvements.

Not everyone has been oblivious to these problems, or slow to react. Systems Maintenance and Services has already appointed a public relations agent to promote its services to potential customers. European marketing director Stuart Peel feels that "third party organisations need to strengthen marketing and aggressiveness."

The CSA has just completed its

ELEYONS... Huge expansion potential for field service.

"Appleby's doing his bit for boosting Britain's exports of software - he's emigrating."

University brings telecomms to the world's hungry belt

by Thomas Land
THE University of the West Indies is installing a satellite-based radio teleconference system to broaden its medical, farm advisory and educational services to its campuses and extension centres throughout the island nations of the Caribbean. Brazil's Federal University of Rio Grande do Sul has designed its own teleconference system.

A meeting of specialists from many countries and international organisations decided that teleconferencing is an essential development tool for the hungry belt of the globe.

The system comprises a combination of telecommunications and computer technology linking large numbers of geographically dispersed individuals and communities.

Conferences lasting several months can be held in this way, and specialists can take part in several of them simultaneously without leaving their desks, laboratories or surgeries.

The system offers considerable savings since telecommunications are incomparably cheaper than travel.

The basic principle of teleconferencing is increasingly exploited in the rich world for such commercial purposes as the movement of funds and data. A paper recently

published by the United Nations in Geneva cautions poor countries that many of them "may find themselves effectively cut off from modern scientific communications in the future" unless they participate in the present, still early development of teleconference networks.

Hence the urgency of the pilot teleconference projects mounted in the West Indies and Brazil. The system holds out a promise of solution to many obstacles hindering research as well as higher education, arising from the lack of proper communication facilities in the developing regions.

The West Indian system is ex-

pected to be operational later this year. It will initially link the university's three main campuses at Jamaica, Barbados and Trinidad - with extension centres in St Lucia and Dominica. Each location will have a teleconference room for 20-30 people equipped with a voice circuit and speaker system. Students, tutors and instructors at any of the locations will be able to talk to, and be heard by everybody at all the classroom sites.

The system will also improve the dissemination of information in such vital spheres as public health and agriculture to some of the less developed islands of the region. The West Indian scheme is one of several planned to explore the use of satellite technology.

The Brazilian university has de-

signed its own teleconferencing system in order to avoid the pitfalls of improving technology without a full understanding of its implications. The system provides simple, inexpensive and flexible communications linking medical and agricultural research workers at various institutions thousands of kilometres from each other.

What is the most efficient

for such a tank? See page 29 for

solution.

“ 3i Ventures recognised the Wolfson Institute of Biotechnology of Sheffield University as a centre of excellence in plant cell culture. Plant Science Ltd. was set up as a joint venture with Sheffield University with equity capital provided by 3i Ventures. Their involvement was highly professional and all their negotiations were conducted in a friendly and helpful manner with a notable lack of bureaucracy.

DR. TONY JUBB, MANAGING DIRECTOR, PLANT SCIENCE LTD.

“ When Imperial Biotechnology was set up it broke new ground in co-operation between universities, financial institutions and industrial enterprise. 3i Ventures initiated this as a joint venture with Imperial College, provided the initial investment of £400,000 and helped to identify the founder management team.

DR. TREVOR LANGLEY, MANAGING DIRECTOR, IMPERIAL BIOTECHNOLOGY LTD.

“ We had an immediate rapport with the people from 3i Ventures. They not only understood our technology but they also saw its commercial potential. They quickly became actively involved in the business and played a key role in introducing us to potential business partners in the U.S.A. 3i Ventures' financial and commercial know-how and real understanding of what makes high technology business really tick is invaluable.

PROFESSOR STUART RAMSDEN, CHAIRMAN, LASER APPLICATIONS LTD.

“ 3i Ventures' capital investment and active participation added a new dimension to the way the company could be managed. They brought to the table a wide range of contacts, an understanding of the need to react quickly to business opportunities, and most importantly the ability to complement the skills required to move high technology into very competitive markets as has been achieved with robot sales into North America and Japan.

DR. BERNARD CAPALDI, DIRECTOR, PENDAR ROBOTICS LTD.

“ Following the first two years of successful and profitable operation - largely in export sales - 3i Ventures played a key role in arranging for a public offering of 10% of the company's shares through the New York "over the counter" market which raised an additional \$8.8m for expansion.

DR. LEN BROWNLOW, MANAGING DIRECTOR, RODIME LTD.

Our clients say a lot about us.

Their company names say we're involved in all the high-growth, high-technology industries: bio-sciences, micro-electronics, telecommunications, computers and industrial automation.

While their comments say our experience in providing entrepreneurs with financial and technical help can play an important part in building a business.

Your business, perhaps.

If you'd like to talk, we are 3i Ventures (formerly TDC) and you can contact us at the address below.

PEOPLE

Smith and Jones team flies high at Icarus

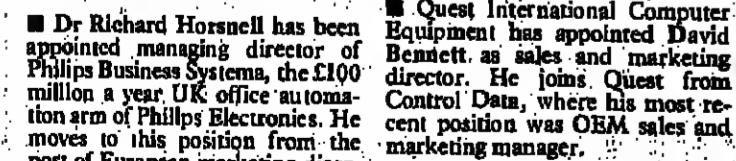

Icarus Computer Systems now has a Smith and Jones partnership in payroll. The two men hope to increase business for the North-west London based distributor of Superbrain and Columbia PC computers. Brian Jones (left), who has been in charge of sales and marketing at Icarus for over a year, joins the board of the company as sales and marketing director. Roger Smith (right) joins from Colt Computer Systems as products sales manager.

■ Computer Automation has formed a sales team for its newly launched SyFAnet distributed processing network. Four sales executives have been appointed. Gordon Campbell brings eight years' experience as a sales executive with Burcett, Romeo Vickers and Olivetti. He will deal with the East Midlands. Dick Edwards joins from United Glass, where he worked for 13 years. He will be responsible for sales in West London and Buckinghamshire. Hugh McDaid joins from a sales career in the wine and spirit trade. He will be responsible for sales throughout South-west London, Surrey and West Sussex. Finally, David Giles has been promoted from production manager in Computer Automation's Dublin factory. He will deal with the Irish marketplace.

■ Ken Walton (above), managing director of STC Components, has also been appointed chairman of STC Business Systems, succeeding Sir Kenneth Corfield. The appointment has been made to give the company additional strength in a liberalised telecommunications market. Walton has also been appointed chairman designate of STC Distributors.

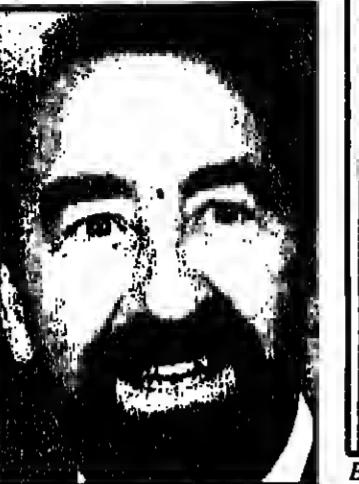

■ Dr Richard Horsnell has been appointed managing director of Philips Business Systems, the £100 million a year UK office automation arm of Philips Electronics. He moves to this position from the post of European marketing director at Philips Data Systems in Apeldoorn.

■ Tony Scrivens has been appointed British Telecom field sales manager by Digital Microsystems, the local area network company which is part of the Exel Group. Scrivens joined Digital Microsystems at its formation in September 1982 from Exel Engineering, where he was responsible for sales of the Exel range.

■ Rodime has appointed Barrie Wilson as marketing administrator manager. He joins Rodime from Burroughs in Livingston, where he was activity manager responsible for technical liaison and support between manufacturing, marketing and field engineering departments worldwide.

■ Bob Male (above) has been appointed branch manager, manufacturing division, responsible for sales in the UK and Ireland of MIMS, Geisco's fourth generation application development system for manufacturing companies. Male joined Geisco in 1982 to sell manufacturing software.

■ Tim Cavaney has joined Computers as sales manager responsible for UK and export sales of the Lynx range of microcomputer equipment, including the new 96K and forthcoming 128K models. He was previously a multiple accounts manager at Commodore, where he played a major role in building sales of the Vic 20 and Commodore 64 home computers.

■ Roger Paradise has been appointed branch manager, Midlands region, for Business Computer Systems. He is responsible for sales and support of the company's range of mini and microcomputer systems. Paradise has been in the computer industry for 15 years and before joining BCS was with ICL for seven years in charge of new business sales in the Midlands.

■ Gandalf Data has named Tudor Banaciu in the newly-created position of European marketing manager for Gandalf Services, SA, its subsidiary in Geneva. Dr Banaciu has been an independent consultant in data networking and was previously associated with Datelec, a distributor of data communications products, and with Digital Equipment Corp (Lausanne).

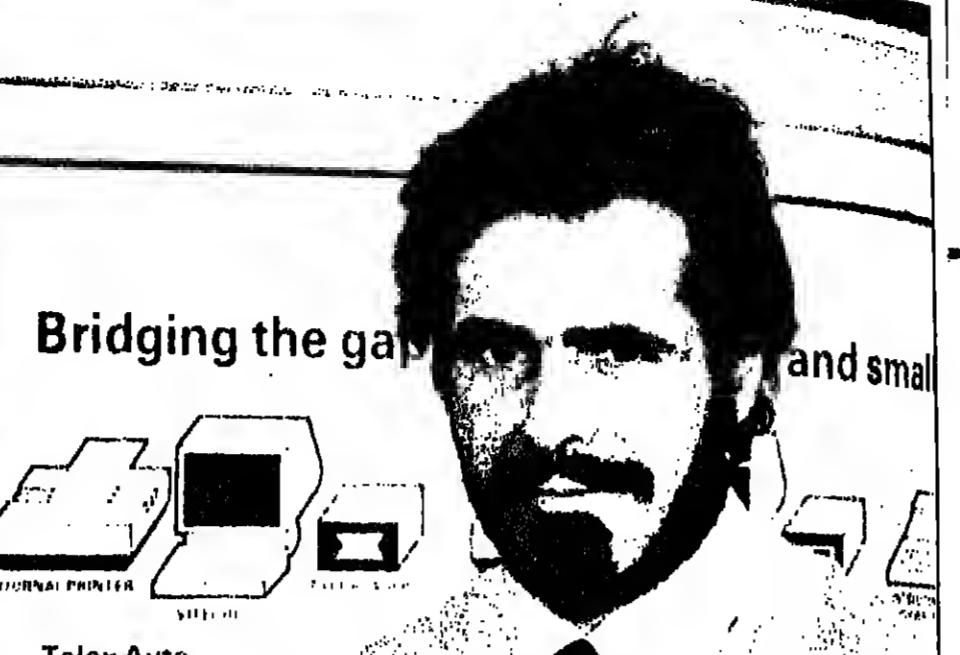

■ Comac Systems, the computer aided maintenance management specialist of Colnbrook, Slough, has appointed Peter Forster (below) as marketing manager. His appointment follows the recent launch of Comac III. Previously he was marketing director of James Clark and Eaton, glazier and glass processor. Comac has also appointed Peter Greenhalgh as Midlands sales executive. Formerly he worked for a lubrication systems engineering company.

■ Software specialist in the London insurance market Sherwood Computer Centre has made two promotions to senior technical level. Sue Patel, formerly a team leader on the company's batch processing system for insurance companies, has been made a manager with special responsibility for technical review and enhancement of the Spartacus real-time insurance and reinsurance system. She has been with Sherwood since 1980. Steve Bardell, previously a business analyst with Sherwood's Datacom Division, where he has worked for six years, has been appointed a business consultant. He is now responsible for analysis and development of new business requirements for Datacom.

■ Quest International Computer Equipment has appointed David Bennett as sales and marketing director. He joins Quest from Control Data, where his most recent position was OEM sales and marketing manager.

■ Andrew Ford has joined Insight Database Systems in European marketing. Ford was previously with financial systems specialist Star, where he was a consultant.

■ Promotion has taken Frank Richardson from sales and marketing director to the post of managing director with Lambert Computing Hardware Sales, distributor of DEC, DEC compatibles and a range of other peripherals.

Bridging the gap between large and small business

British industry is the target of a fourfold expansion plan by Tony Stenham, the new managing director of ATS (Communications), the telex network company. Formerly of Rolls Royce and British Leyland, Stenham plans to achieve his target in four years. Until now, Sussex-based ATS has concentrated largely on the business market, both in Britain and overseas. From his own experience in industry, Stenham believes ATS is ready to take on what he believes is a largely unexploited industrial market. He plans to do this through a programme of major product

launches, building on the ATS expertise in telex and electronic message sending system. The company is aggressively market its expanded range through a reinforced distributor network in Britain and overseas. Stenham moved to ATS from Thorn EMI. An engineer by training, he has spent all his working life in industrial management. He says: "What I hope to bring to ATS is driving force. There is an awful lot of business in the industrial sector. There are people who we know can benefit from our systems, but do not know we exist."

■ Douglas Gemmell has been appointed deputy chief executive of Information Technology Ltd, the parent company for Computer Technology Ltd, Office Technology Ltd and Network Technology. He joins ITL from Smith's Aerospace and Defense Company where he was director and general manager of the Cheltenham Division for six years. He was previously operations director at Membrain, responsible for engineering, production and quality control.

■ Stephen Page (right), one of the founder directors of Sapphire Systems, a producer and distributor of serious business software, has been appointed managing director of the company. Formerly chief accountant with W. Boulters & Sons Group, Page founded Business Solutions in conjunction with W. R. Spouse in 1979, which merged with Essex-based Sapphire Systems in 1982.

DIARY

OCTOBER 4

Mon-Machine Interaction Programme is the theme of the British Computer Society Microcomputer Specialist Group first meeting of the 1983-84 session at Baden-Powell House, Kensington, 1.30pm. Cost £1.50. Details from Robin Phillips, secretary, 21 Rye Close, Saltdean, Brighton BN2 5GP.

OCTOBER 12

Seventh annual symposium on computer applications in medical care. BCS Medical Group, Baltimore Convention Centre, Baltimore, Maryland, US. Details from Dr Virginia Saha, Nursing Consultant, Division of Nursing, Bureau of Health Professionals, 3700 East-West Highway, Rockville, Maryland 20852.

OCTOBER 15, 17

Data Protection is a one-day course in London on November 15 and Liverpool on November 17. Instructor: Joseph Kenny. Details from Keith London, 3-50 Hytton, Maryland 20852.

OCTOBER 10-11

AGARD, the NATO Advisory Group for Aerospace and Development, is running a lecture series on Development and Use of Numerical and Factual Databases. Held in London, the lectures are free. Details: Defence Research Information Centre, Orpington SE18 3JL.

OCTOBER 21

Scientific Computer is running a seminar on Macsyma, a mathematical software package, at the University of Sussex. Fee £17.25. Details: Graham White, 04446 5101.

CONFERENCES

■ World Communications - Tomorrow's Trade Routes is the title of a conference to be held at the Royal Lancaster Hotel, London, on December 7. Cost is £125 (bookings of 10 places - £900). The conference will concentrate on the impact of developments in new technology and telecommunications on world trade. Speakers will include Cecil Parkinson MP, Sir George Jefferson (British

Telecom), Sir Kenneth Corfield (STC), David Firthberg (British Computer Society) and Sir William Barlow (Thorn EMI Engineering). Conference chairman is Sir Donald Maitland, chairman of the UK National Committee for World Communications. For further information, contact British Computer Society, 10 Mansfield Street, London W1, Tel: 01-637 0471.

Your company is looking to the future, you need new premises but you are reluctant to commit yourself to a long lease.

At last there is an alternative to leasing...

Unlike so many other estates, Greenlea Park was designed from the outset to enable companies to buy new industrial or warehouse premises. The buildings, which are of superb quality, are contained within a landscaped development overlooking playing fields in Colliers Wood, SW19.

Is this the opportunity you have been looking for, to move your company to premises you can really call your own? With every incentive, because they are your own, to adapt them to suit the needs of your business. To help you realise this ambition, mortgage facilities have been arranged in advance, with Barclays Bank plc, subject to the Bank's normal financial criteria.

40% by value of the development has already been sold or is under offer. 7 units of 4,750 sq ft to 12,000 sq ft remain. Ring today...

Backs-to-the-wall Bull looks brighter

Jack Gee visits France's Bull to discover how its fortunes have fared since changing its name from Cii-Honeywell Bull

IT'S still backs to the wall at Bull, France's state controlled computer maker, though chairman Jacques Stern and general manager Francis Lorentz are putting up a bold front to the business world.

They have taken the opportunity of the Siobh gathering of industrial experts and journalists in Paris to present the achievements of the company since the socialist government came to power and the tasks which lie ahead.

Within a few months of changing its name from Cii-Honeywell Bull, the top management at Bull reports that, thanks to improved group sales it expects to halve last year's losses, bringing them down to FFr 600 million (£48 million) in

the current trading year. Stern says this brighter outlook reflects a 28% rise in Bull's sales during the first six months of the year, compared with the same period in 1982. He is confident that group sales will come close to FFr 11 billion (£880 million) for the full year, compared with FFr 8.13 billion (£650 million) in 1982.

However, the Bull management recognises that the group is unlikely to show a profit before 1986, the closing year of France's five-year electronics plan.

The main objective of the plan is to raise French high technology industries to the level of those of the US and Japan by 1990. When Stern and Lorentz moved

into the hot seat at Cii-Honeywell Bull a year ago, they took on the most inenviable job in France's computer industry. The till was empty; manufacturing was in a state bordering on shutdown; staff were demoralised and in despair; the customers were wondering whether they should turn elsewhere; and the relationship with Honeywell had gone sour.

Honeywell refused to inject any fresh funds into the group, in which the French government had reduced its stake from 49% to 19.9%. "Now," Stern claims, "relations with Honeywell are excellent."

Since the middle of 1982 Stern and Lorentz have embarked on a series of crash courses to instil new courage into their staff; hired new, able teams of engineers and sales people; and begun the slow, painful process of trying to restore the company to financial health.

In the process of the transformation of Cii-Honeywell into Bull, the company acquired an office automation subsidiary, Transac, from Compagnie Générale d'Électricité and SEMS, a minicomputer venture from Thomson.

Bull is about to assume new computer responsibilities in the division of assets between CiiE and Thomson, and Stern has been advised by the government what to expect. But, in his encounters with journalists over the past few days, his lips have been sealed on this score.

An essential part of the new Bull strategy is to set up a series of subsidiaries with clearly defined responsibility for each area of activity and with instructions to show how much money they are making (or, in most cases losing). Peripheries now concentrates the group's efforts on peripherals; Bull-SLMS concentrates on the old Thomson minicomputer market; and Bull-Carte Mémoire is developing and selling the Smart Card, a field in which the company shares with Philips Data Systems (France) a worldwide lead start.

Stern is enthusiastic about the venture with ICL and Stern is to set up a joint research centre in Bavaria: "English will be the working language," he revealed, and he says that Bull is sending many of its top research people to Munich to work on computer architecture and artificial intelligence with their British and German colleagues.

He rules out the joint development of a supercomputer, though ICL is working on a big number cruncher of its own for the French military, with more needed defence ministry funds.

One of the cruellest dilemmas confronting Bull results from the agreement with Honeywell in 1982 to build computers that are not compatible with IBM's. Today Bull's survival depends on sales of machines which lack the compatibility increasingly sought by customers. If Bull changes its policy, it risks losing its present customers to Honeywell and NEC or forcing them to switch to IBM.

Stern admits that ICL is a French firm that has a 7% share in playing an important role in the French firm's strategy. If ICL makes it's breakthrough into hyper-computers using new integrated circuits, Bull is certain to profit. It would then be well geared for a counterattack against them.

Facing the evidence that Bull cannot afford to put its fingers in every pie, Stern said: "We accept our reputation as general practitioners in data processing. Our customers expect from us a wide ranging catalogue as possible, from the mainframe to the mini."

But he added: "We have to concentrate on a few key products. As for the others, we shall have to acquire know-how in grouping them, beefing up our catalogue through co-operation agreements and ensuring that all these systems can work together and communicate."

STERN (right, with French Prime Minister Pierre Mauroy) . . . Putting up a bold front.

BRITAIN'S PROFESSIONAL COMPUTER SHOW

And no doubt you will be at Compec too.
At Olympia, from November 15 to 18 1983.

Another year's gone by since the last Compec. Another year of progress, success, achievement and excellence.

And another year of problems, failures, hassles and disappointments.

That's why every computer professional and serious user needs to know what's on show at Compec.

There's no other exhibition with the quality, scope, size and sheer volume of information that's at Compec. There's no other show that repays so well the time you spend.

And there's no better way to spend a day in November than visiting Compec.

You'll know what's going on behind the scenes - and in front of them - to benefit your present and future operation.

Compec tickets cost just £1.50 in advance - that's half price - or £3.00 on the day. Clip the coupon and make sure you update yourself on the ever-changing world of DP.

Because there's no doubt, whatever your interest, whatever your need, it's at Compec 83, Britain's number one computer show.

NO DOUBT. IT'S AT COMPEC.

To: Compec 83 Tickets, Reed Exhibitions,
Surrey House, 1 Throwley Way, Sutton SM1 4QQ.
Yes, I'll be attending Compec. Send me _____ tickets
at the discount price of £1.50 each.

A cheque is enclosed for £_____ payable to
Reed Exhibitions.

SOFTWARE MONTH

Word processing as we know it is being put out to grass

Word processing is really just another computer application. Software Month takes a long, hard look at its prospects

Apart from a major shake-up top management, Bull has taken on 3,500 new staff, with the acquisition of SEMS and Transac, but, because of erosion through retirement, staff numbers have remained steady for the past year, at about 25,000.

Last year the 21,000-strong workforce at IBM-France produced a turnover of FFr 22.2 billion (£1.78 billion), compared with Bull's FFr 9.5 billion (£760 million). Ironically, Bull lost FFr 1.8 billion (£108 million) - the same as IBM-France's profit.

As a state controlled firm, it cannot undertake the improvements in productivity and quality of staff which the logic of the market dictates. It carries a cumbersome product range - the result of zig-zagging strategy over the years, which it cannot shed without losing its traditional customers.

In the process of the transformation of Cii-Honeywell into Bull, the company acquired an office automation subsidiary, Transac, from Compagnie Générale d'Électricité and SEMS, a minicomputer venture from Thomson.

Bull is about to assume new computer responsibilities in the division of assets between CiiE and Thomson, and Stern has been advised by the government what to expect. But, in his encounters with journalists over the past few days, his lips have been sealed on this score.

An essential part of the new Bull strategy is to set up a series of subsidiaries with clearly defined responsibility for each area of activity and with instructions to show how much money they are making (or, in most cases losing).

Peripheries now concentrates the group's efforts on peripherals; Bull-SLMS concentrates on the old Thomson minicomputer market; and Bull-Carte Mémoire is developing and selling the Smart Card, a field in which the company shares with Philips Data Systems (France) a worldwide lead start.

Stern is enthusiastic about the venture with ICL and Stern is to set up a joint research centre in Bavaria: "English will be the working language," he revealed, and he says that Bull is sending many of its top research people to Munich to work on computer architecture and artificial intelligence with their British and German colleagues.

He rules out the joint development of a supercomputer, though ICL is working on a big number cruncher of its own for the French military, with more needed defence ministry funds.

One of the cruellest dilemmas confronting Bull results from the agreement with Honeywell in 1982 to build computers that are not compatible with IBM's. Today Bull's survival depends on sales of machines which lack the compatibility increasingly sought by customers. If Bull changes its policy, it risks losing its present customers to Honeywell and NEC or forcing them to switch to IBM.

Stern admits that ICL is a French firm that has a 7% share in playing an important role in the French firm's strategy. If ICL makes it's breakthrough into hyper-computers using new integrated circuits, Bull is certain to profit. It would then be well geared for a counterattack against them.

Facing the evidence that Bull cannot afford to put its fingers in every pie, Stern said: "We accept our reputation as general practitioners in data processing. Our customers expect from us a wide ranging catalogue as possible, from the mainframe to the mini."

But he added: "We have to concentrate on a few key products. As for the others, we shall have to acquire know-how in grouping them, beefing up our catalogue through co-operation agreements and ensuring that all these systems can work together and communicate."

computer manufacturers should spend a lot of time and energy on producing ever-better system applications.

Within this climate it was equally logical that sooner or later a computer manufacturer, particularly if it was already involved in the typing function, would take the relatively small step of replacing the mechanical elements of the automatic typewriter with more reliable electronics, give the whole thing a computer brain, control it

in global domination), and offered the line of less resistance for an evolution that would have happened with or without IBM.

Nevertheless, IBM research and development has played an important part in shaping the modern word processor (particularly, for example, in the floppy disc and Winchester drives), and could thus fairly be described as a catalyst to the development of the word processor.

Nevertheless, most people immediately and automatically still associate the term "word processor" with a standalone, highly specialised microprocessor-based system totally dedicated to the function of improving the efficiency of office typing.

The word processor is thought of as a completely separate animal to the microcomputer.

There are two reasons for this, both of them based on the history of word processing. In the first place, the modern word processor is the product of two separate but converging lines of development.

The earliest word processors evolved in a direct line from even earlier automatic typewriters. These were purely mechanical devices, often using punched paper or cards for "memory", and owing nothing to electronics. Automatic typewriters were, indeed, completely separate from the early computers.

However, as the computer developed along its separate line, it became more and more apparent that programmer productivity could not be ignored. Of paramount importance to productivity is the editor.

It would be misleading, however, to claim (except in jest or symbolic terms) that IBM "invented" word processing" (as it recently been suggested). IBM was merely in the right place at the right time (that is, everywhere, as it was a system editor, and call it a word processor.

And it will surprise nobody to find that the company concerned was IBM.

It didn't happen overnight, and it is difficult to say when the automatic typewriter gave way to the word processor. IBM's embryonic word processor was, for example, little more than a mechanical typewriter with some magnetic memory and a control unit stuck inside.

It would be misleading, however, to claim (except in jest or symbolic terms) that IBM "invented" word processing" (as it recently been suggested). IBM was merely in the right place at the right time (that is, everywhere, as it was a system editor, and call it a word processor.

So large was, and still is, the market that dozens of separate companies came into existence devoted solely to word processing. And if the manufacturer of the word processor doesn't (or at least, didn't) manufacture computers, how could the two products be the same thing?

But the myth is now being dissolved, and the very existence of the dedicated word processor is under threat. The challenge started not simply with the eight-bit microcomputer, but more specifically with the CP/M operating system.

The portability of CP/M software created an enormous potential market for software writers. Slowly, some very advanced word processing software became available to the eight-bit microcomputer.

Two elements had come into play. Firstly, it had become worthwhile for individual software houses to write very clever software, and secondly, with that clever software, sales were able to offer to "turn your accounts machine into a word processor for less than £300".

WordStar is the product that immediately comes to mind - but the fact is that many people consider it to be the best word processor, whether using a PC or a dedicated word processor; currently available.

Small companies that had earlier thought of buying an accounts machine from Olivetti and a word processor from Wordplex now began to think of a single microcomputer using any one of a dozen word processing packages from Monday to Thursday, and an ac-

counting package on Friday.

For a while the dedicated word processor fought against this new tide. The first and most obvious option was to reduce prices and companies like Digital Equipment reduced its prices from around £10,000 to around £5,000 (for the WS78 at the beginning of this decade).

The next move was to stress the ergonomic research that had gone

into the physical design of the dedicated word processor.

This year, however, has seen the emergence of the product that is likely to cause the ultimate shake-out in word processors: the 16-bit PC at a price that is often lower than the more limited eight-bit dedicated machine.

Logic says that few (if any) dedicated word processors will survive against this new threat; logic says that few (if any) dedicated manufacturers will survive at all.

transition. We are now seeing the emergence of operating systems that are capable of harnessing the full potential of the 16-bit processor (Concurrent CP/M-86, the expected DOS 3, Unix, Pico and others).

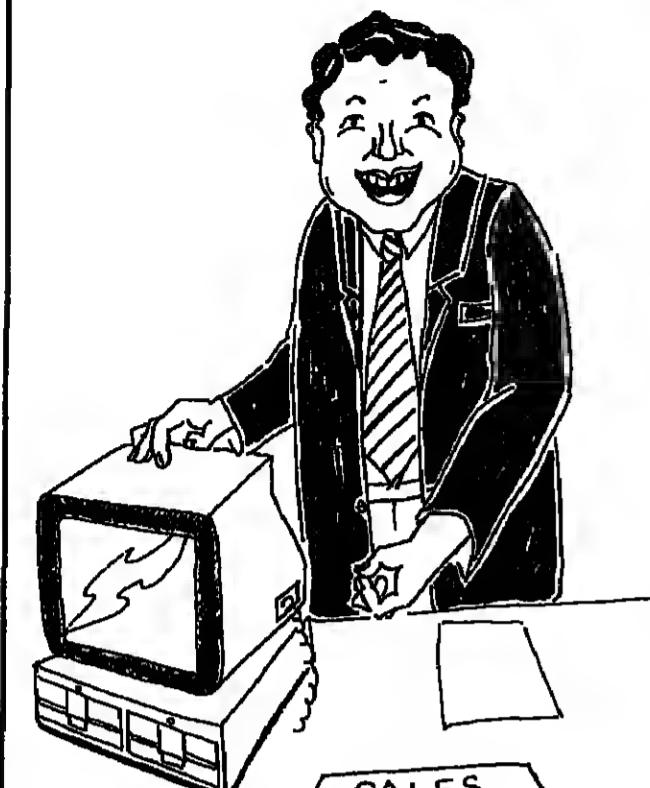

Logic says that few (if any) dedicated word processors will survive against this new threat; logic says that few (if any) dedicated manufacturers will survive at all.

And this is at a time when microcomputers are in a period of

Is it time to put the dedicated word processor out to grass?

Where word processing is heading? - a 16-bit professional computer.

"And here's our executive model word processor. We call it the PC . . ."

Personal micros alter the market

... but dedicated word processing may survive a while yet

TO determine whether the dedicated word processor (being a combination of both hardware and software integrated into a system dedicated to the more efficient processing of office text) can survive for much longer, one needs to examine what the word processing market really is.

There are, in fact, two markets: the large and medium-sized company with a pool of a dozen or more full-time typists; and the many thousands more one-man and a secretary, high street and home based companies — solicitors and estate agents, brokers, consultants and accountants, architects, designers and entrepreneurs.

Three years ago these two markets were served only by the dedicated manufacturer, who, through lack of competition, came to believe that there was just one big market. The latter market, however, is better served by the multi-functional personal computer than by the single purpose word processor — and for the word processing manufacturer, this market is now rapidly dissipating.

Whether you believe that word processors as separate entities will disappear altogether or not depends largely on whether your interest is mainly in personal computing or text editing. "In my opinion," says Tony Plackett, technical director of ACT (Pulsar), "the dedicated machine is redundant. Developments in operating systems and keyboard manipulation

allow microcomputers to look like a dedicated word processor when needed and then to revert to other functions."

Although he must surely be thinking of the Sirius personal computer it is also the approach taken by British manufacturer LSI Computers. The 16-bit M4 has an fewer than 61 user-programmable function keys. These can be programmed to produce a total of 256 commands/characters, either by the user during use, or by simply invoking pre-defined key-tables which automatically sets the keys.

As Tony Plackett says: "The primary benefit of word processing on microcomputers is its ability to integrate with other applications."

"Used in conjunction with a spreadsheet or financial modeling package, word processing can be provided on two levels, creating the file to drive those packages or taking the output and adjusting if for presentable management report."

"And in the next few months

The future of word processing is more likely to be with Digital, IBM, Wang and, dare we say it, our own ICL, than with traditional manufacturers

should be able to integrate with proper graphics."

If this is right, then it is indeed a case of horses for courses, then the dedicated word processor will surely survive for a long time yet.

The market, however, is both shrinking and rapidly changing in the face of the personal computer.

A company really needs the requirement of at least three or four full-time typists before it can justify a dedicated word processor.

But many companies of this size

also have or need a second microcomputer, mainframe or microcomputer network.

It would seem unlikely that such buyers would want to mix their applications.

In other words, if a company has Vax or IBM mainframes, it is likely to prefer Digital or IBM word processors.

When viewed in this light, it seems fair to say that the dedicated word processing market can no longer support the number of manufacturers still operating, and that of these, it is the bigger companies with established offices and growing large computer user bases.

The future of word processing is more likely to be with Digital, IBM, Wang and, dare we say it, our own ICL (if it can only get its act together), than with WordStar, AEG and the other traditional manufacturers.

A similar view comes from Alan Frost of Phillips Word Processing. "About 150,000 typewriters are purchased annually for business use. The productivity of the typing station can be increased dramatically by using a word processor," he said.

"It is unlikely that office routine will change, certainly over the next few years, to require a typist to need data processing facilities. Similarly, the majority of people who now need the data processing capabilities of the personal computer are not, in the main, large producers of business text. A horse for courses approach would

therefore seem the most sensible route."

"Having said that," continued Frost, "a machine that can only do word processing is not likely to be here to stay. It is unlikely the people will wish to replace the typewriter by machines that can only produce text."

"Most word processors or data processing programs."

Here, however, the word processor cannot compete with the personal computer.

As Tony Plackett says: "The primary benefit of word processing on microcomputers is its ability to integrate with other applications."

"Used in conjunction with a spreadsheet or financial modeling package, word processing can be provided on two levels, creating the file to drive those packages or taking the output and adjusting if for presentable management report."

"And in the next few months

the market is separating into two distinct spheres: that of dedicated word processing within large or medium-sized companies; and that of multi-functionality within smaller organisations, where a computer is used as word processor one day, an information storage and retrieval device on another, and an accounts machine, or modeler in between."

CARLTON AMDAHL... Should be given equal credit with his father.

The Amdahls' company seems to be weathering production delays as it plans its assault on the established suppliers. Bob Djurdjevic reports

Trilogy tempts the investors to risk it

AMID the echoes of the battle of the giants, a relatively small American company is making a bid to become the world's third major supplier of advanced computer technology. While all eyes are peeled on the IBM versus Japan Inc duel, Trilogy Ltd, of Cupertino, CA, could sneak past to become a major computer industry force.

At least that's what its investors are hoping, who have put up over \$250 million of investment capital so far. Among them are finance companies such as Bank of America and a Merrill Lynch partnership, insurance companies like Actua and Canada's Crown Life, and computer companies like Ci-

Honeywell Bull of France, Sperry Corp (Univac) and Digital Equipment (DEC).

Considering another \$100 million is still needed, according to company founder and chairman Dr Gene Amdahl, Trilogy promises to be one of the most expensive start-ups in the computer industry.

By comparison, before Amdahl's first IBM-compatible venture, Amdahl Corp, went public in 1976, initial investors had put up about \$36 million. Adjusted for inflation, this would be about \$90 million in 1983 terms, or about one quarter of Trilogy's estimated seed capital requirements!

This is why Gene Amdahl's

second PCM venture couldn't wait to have its product completed before going public. On September 1, Trilogy made its bid for public funds through a Merrill Lynch Capital Markets' preliminary offering. The company is offering six million new shares (about 15.8% of the total after the sale) to the public at \$12 to \$15 each.

If these shares are fully subscribed for, the proceeds will provide most of the additional financing which the company needs.

Trilogy plans to use the \$60 to \$70 million raised to fund remaining development costs. Another \$30 million will be allocated to capital equipment costs. About \$20 million will be used to fund the initial marketing and customer support services.

Pending the completion of the public offering, Trilogy has also secured a \$25 million bank loan, to cover the shortfall between the proceeds of the sale of its common stock and the planned expenditures.

If Trilogy's latest first customer shipment (FCS) date -- July 1985 -- is met, many investors will have had to wait over five years to find out if their investment has paid off.

This illustrates how much faith and no-biting is built into every high-risk, large CPU venture, along with its chips and circuitry. But the rewards which successful ventures reap are also huge.

For example, Amdahl Corp was able to report a profit in the first quarter after it started shipping its V/6s, because of its "purchase only" strategy. Its seed investors who had to wait almost five years to see the first CPU shipped.

The waiting paid off handsomely, however, when the company went public. Now some of them hold Amdahl stock worth over 15 times their initial, multi-million dollar investment.

Trilogy's preliminary prospectus does not try to conceal the high level of risk involved. The Securities and Exchange Commission's disclosure requirements saw to that. Warnings about the risk

If your computer gets stuck in a dead-end job you clearly haven't got dBase II.

There you are with all that microchip potential and no software that's man enough to exploit it.

Too specialised, too basic, too difficult, too risky. Over the top in everything except flexibility! And that's a downright insult to intelligence -- yours and the computer's.

For years now, the computer industry has been hooked on databases. And there's absolutely no doubt that an effectively run database is the only certain route to successful information management. The micro's got the horsepower, so why shouldn't you have the software to go with it?

No reason at all. That's why ASHTON TATE developed dBase II.

With dBase II you can harness all your microcomputer's potential. It gives you a flexible structure on which to build business information and a straightforward means to develop complex and varied applications. In short, dBase II gives you all you need to manage and use information.

When your business grows, you can change the way you handle information without changing the information itself. You can develop your own applications or buy them in ready-made. You can even build a set of menu-driven routines and let untrained people loose amongst your most valuable information in

INFORMATION

absolute safety.

These features and more have made dBase II a standard for microcomputer information management. And it's a standard that's as good for the one-man business as it is for the larger company.

But don't just take our word for it. Ask any dBase II dealer and try it out for yourself for 30 days.

You're hardly taking a risk, because if you don't like it, you'll get your money back! But before the 30 days is up you'll wonder how you ever managed without dBase II.

So do your computer a favour. Give it a copy of dBase II.

For the name of your nearest dealer contact ASHTON-TATE distributors:

COMPANY PROFILE

Trilogy attracts investment in spite of the high risks

Continued from page 28

process. "Sometimes sparks would fly," said Ted White, describing the moments when the two designers would hold opposing views about a problem's solution. Nevertheless, those sparks spawned a design believed capable of delivering at least 30 mips of CPU performance by mid-1985.

This means 3.75 times more power than IBM's current 308X basic processor (3083-1; 7.9 mips), and about 2.7 times better performance than Hitachi's AS/9060 (11.2 mips).

Besides performance, another key to success as a large computer maker is being the low cost producer. A key to being a low cost producer is the yield in the manufacturing of chips.

Until now, IBM has been able to retain a leading position because of its huge economies of scale. It is believed that IBM's manufacturing cost is only 20% of a large CPU price, and that only in the early phases of its life.

Later, as the company starts to benefit from the manufacturing learning curve, the costs decline even further, perhaps down to 15%. That means just over \$600,000 for a CPU bringing in over \$4.1 million in revenue. And that means huge margins and just rewards for lengthy and expensive development processes.

High IBM margins is one of the reasons a company with higher relative manufacturing costs (eg Amdahl Corp) has stayed competitive with IBM, being contented with lower returns. Trilogy's technology, however, promises to put a relative uplift into the driver's seat as far as costs are concerned.

Trilogy replaced him with Doug Fairchild, previously head of Fairchild's bipolar technology.

"There is going to be a delay in the CAD/CAM phase, but not as much as four months," said Dr Amdahl. This work was originally scheduled to start pilot production on March 22 this year.

Now it appears the delay will be longer than expected, with the latest estimated FCS date slipping to July 1985. The costs of such delays are significant.

According to Amdahl, the further delay from November 1984 to February 1985 would cost an additional \$15 million. But a year's delay in FCS date will have a much more profound marketing significance.

"We expect to make deals of this kind with just about anybody who needs this type of technology. Except, of course, IBM and the Japanese," said Dr Amdahl.

The semiconductor industry, however, is very volatile, frequently going from feast to famine. With computer companies as customers, chip-makers are subjected to constant over-buying and under-ordering of computer component inventories, as companies try, but rarely succeed, to anticipate changes in economic cycles.

There isn't much doubt what the outcome would have been. But by July 1985, IBM will probably be shipping Siem in volume, and Hitachi's 20-25 mips base engine will also probably be taking part in the fun.

Trilogy has recently also purchased an AS/9080 (20.2 mips) to run CAD/CAM applications on it, because it requires the largest available processor.

The company's total staff at the end of last year was 400 people. By June of this year, this had increased to 480 employees. Of this number, the engineering departments had 233 people and semiconductor operations 101, with the balance divided between facilities management, manufacturing and general administration and marketing functions.

Trilogy's prospectus also warns: "If this new IBM computer is not compatible with, or has significantly more than twice the processing power of the currently available 308X line of computers, or is delivered before 1985, the commercial success of the company (Trilogy) could be severely affected."

This means Trilogy's position will not be nearly as good as it would have been if the company had been able to stick to its original timetable.

Technicians, dressed like NASA astronauts, are only allowed into the second, "semi-clean" chamber, from which they operate the chip-making equipment in the third, "clean" room.

Meanwhile, ordinary mortals are not allowed past the first chamber, where floors glow in filtered

yellow light and sticky tapes remove dust particles from shoes.

An IBM spokesman maintained that this was sufficient, because of the top-down filtration system in the clean rooms.

Some critics also point to the fact that this time, IBM and the marketplace are better able to anticipate Trilogy's competitive threat than when Amdahl was first designing his V/6s. IBM is no longer a self-inflicted showing giant, but an aggressive competitor, working hard on coming back against the threat of advanced Japanese technology.

This time, IBM is also taking Gene Amdahl seriously. The giant computer company has reportedly established two taskforces to study the potential impact of Trilogy's technology on its business.

As for the Japanese, Dr Amdahl himself speaks highly of their accomplishments in the computer industry. "Their technology is phenomenal. I hope that we will be able to compete with them, but it

will have to be a sustained effort to win the technological war."

Japanese companies are not driven as much as IBM is by the quarterly shareholders' reports.

Because of the smaller number of owners, compared with IBM's 725,000 shareholders or more, Japanese companies are able to react more swiftly.

There is also a greater entrepreneurial feeling among the company executives. And it is entrepreneurial, like Gene Amdahl, who have been giving the world new technologies -- not the big company executives.

This means that Trilogy must

GENE AMDAHL... Expects yield to be "significantly greater" than 20%.

as an American alternative to the multi-national IBM and the Japanese vendors.

American computer companies are clearly worried about the intruders. The Japanese are making.

Whether this kind of approach is suited to the Western mentality, which is more arduous with individual rather than collective cre-

ativity, is doubtful. It is uncertain, therefore, that these joint ventures will produce the desired technological results.

Trilogy's approach, with founding entrepreneurs helping to guide the ship along the way, has a better strategic chance of success,

BOOKS

IT SIMPLY DELEGATES EVERYTHING TO MY P.A.'S MICRO

How best to introduce technology to offices

New Office Technology. H. Oiway and M. Peltu. Frances Pinter, London. £15.

FOR those sceptics dubious about the relevance of studies generated by the European Commission in Brussels, this book comes as a refreshingly sharp rejoinder.

Its editors aim to supply clear, practical andargon-free advice to those responsible for implementing information technology in the office. To do this, they draw on the experience of the European Commission Inis Project (Inter-Institutional Integrated Services Information System), which was set up two years ago to establish and implement compatible office technology and communications

into European Community administrative institutions.

There are 13 integrated chapters, each written by an international specialist, although weighted towards academics and social scientists in particular.

The Inis programme is currently moving out of its planning phase, and many of the findings are distilled into this book, which examines implications, change and ergonomic requirements.

In summary it argues a socio-technical approach and the main message is the importance of human and organisational factors when new technology is introduced.

The book succeeds in its aim. It is clear and readable and covers

most relevant topics. There are however, some lapses into heavy academic jargon in places, and the ergonomic discussions only just avoid slipping into tedious detail on distances and measurements.

The most original part of the book is to highlight the importance of software design on user satisfaction. It emphasises that if the software in interactive dialogues is not flexible, there may be decreased job satisfaction with resulting decreased productivity.

For example, when the user is gathering information verbally for keying into the computer, stress is caused if the sequences demanded by the software are too rigid. As users become more proficient in handling the system, they should

John Riley

be able to use different levels of software — consequently the book calls on software designers to provide flexibility.

Another cause of frustration is getting the system response just right. Long delays infuriate users, but the book points out that impulsive times that are too rapid also cause stress.

The book deserves to be more than just another academic text book and industrial managers should read it in the planning stages of introducing new technology, particularly as its principles are to be put into practice in the implementation stages of the Inis project.

John Riley

Catalogue for micro users

Microcomputer Programs in Print. Owen C. Schultz. Postscript Press, Virginia.

A CATALOGUE of programs commercially available is not the most exciting reading; but likely to be a boon to anyone who makes extensive use of a microcomputer. Microcomputer Programs in Print, collated and edited by Owen C. Schultz, is such a book.

Two hundred pages detail the software available for more than 150 best-selling micros. A breadth of 280 subjects, from speech synthesizers through tax and professional business applications to engineering, are combined to

make a total of 2,700 individual items.

The main virtue of the book is that any of these can be located, either computer model or subject, by using the cleverly constructed keyed index. Once found, details of the producer, names and addresses of main suppliers and prices are given.

Included too are the necessary technical details: the amount of memory required, the medium in which the program is available, any peripheral devices necessary for operation, the program language and the operating system.

Throughout, the data is ordered

and clearly printed. Once mastered, the index system is the easiest means of successfully finding information.

Regrettably, all suppliers listed are American-based. So extra costs and inconvenience may nullify discounts.

The book is not for the casual reader but for anyone who intends to install a micro system or extend the scope of a current system.

Whether such a book can be of use to you, find out for yourself by taking advantage of the money-back guarantee.

Patrick McDermott

COMPEC '83

The UK's premier computer show.

Sponsored by
Computer Weekly

November 15-18, 1983.
Grand Hall & National Hall, Olympia, London.

Britain's biggest showcase for computer professionals. Double the size, double the space for 1983!

Time and again, COMPEC has proved itself to be the leading marketplace for the computer industry. So much so, next year we're increasing the selling space, using both Grand and National Halls of Olympia. With 40,000 high calibre visitors expected, we're going to need it!

Make their business your business...

The nation's increasing computer use — and its diversification — is reflected not only in very high attendance figures, but equally important, in the range and importance of COMPEC visitors. These are the purchase-decision makers for everything from mainframes to software. And everything in between. What's more, nearly 50% of all visitors can be expected to be either senior management or board members. And these are the people you want to meet.

Get the full story.

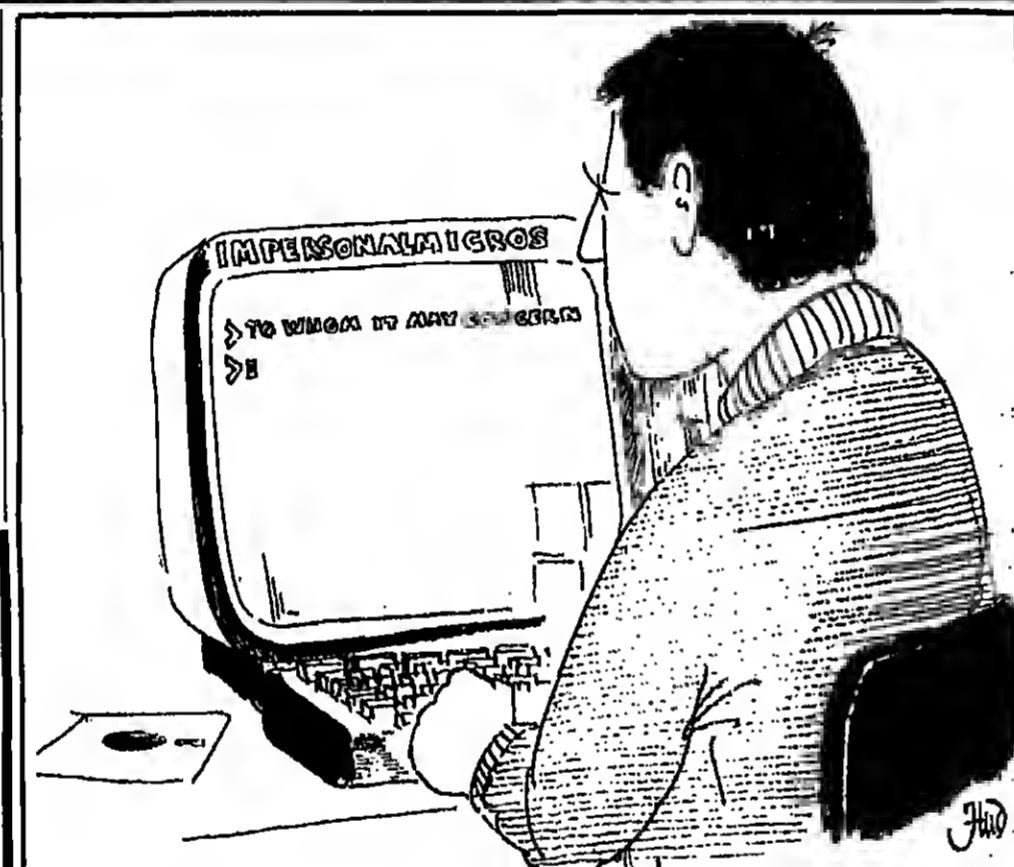

Simply fill in the coupon below and we will send you full details of COMPEC '83. It's a British suggestion show for computers, systems, peripherals and software.

Incorporating the highly successful Software Village

To: The Advertisement Manager, Computer Weekly, Quadrant House, The Quadrant, Sutton, Surrey SM2 4AS.

Catering for the subsidiary course

Pascal Programming: a beginner's guide to computers and programming. Chris Hawksley. Cambridge University Press. £12.50.

IN HIS preface, Chris Hawksley, a university lecturer, explains that he was surprised to find that of the many books available on computer programming, none was to be found that satisfied the students on his own courses.

He felt that as he was teaching a subsidiary course in computing the existing books assumed a level of previous knowledge and experience that his students did not have. So he resolved to write one that catered for people studying computer programming as a subsidiary subject, yet covering the subject in depth.

He was surprised at his claim, as I have come across some very good basic text books. However,

the equivalent of several books is study in a few days.

Also, as it is intended to supplement a course of lectures, it is designed as a teach-yourself manual, although it seems aimed at those for that purpose.

The examples throughout provide clear explanations of sub-procedures, and each chapter ends with a series of exercises. As it is designed as a text book for a subsidiary course, some of the more advanced procedures are not covered, as the author explains in the preface.

It is perhaps a pity that no further reading is suggested, but Hawksley's suggestion could be worth taking up.

Part 2 develops the practical aspects of designing and writing long programs — the examples up to this point are fairly elementary. The going does become heavier here, but then it is a textbook, and not designed for readers covering

David Albury

Guide to good programming too academic

Guide to Good Programming Practice. Brian Meek, Patricia Heath and Nick Rushby. Ellis Horwood.

THE Guide to Good Programming Practice is written mainly by university people, and seems to be aimed mainly at university people.

This is a pity, for there is much food for thought here for experienced programmers, as well as sound advice for beginners. But the commercial applications programmer has to put up with such ideas as mean anything.

examples written for mathematicians and a concentration on Fortran and Algol.

An informative section on structured programming looks in depth at two programs, written in Algol and Fortran. One integrates a system of differential equations using the Runge-Kutta method; the other forms a generalized inverse of a positive semi-definite symmetric matrix.

Hands up all Cobol heads: system programmers to whom such ideas mean anything.

John Kavanagh

PRODUCTS

Instant colour for personal computers

A LOW-COST interactive film recorder producing 35mm slides and instant photographs of personal computer graphics is introduced by Polaroid (UK).

Called Polaroid Palette computer image recorder, the system is designed for use with personal and small business computers to make presentation-quality colour or black-and-white graphics hard copy on new Polaroid 35mm Auto-processor transparency films and Polaroid ER 3½" x 4½" inch instant print diskette software.

Containing a flat-faced, medium-resolution monochrome video screen with a tri-colour filter wheel, Palette allows even monochrome display computers with graphics capability to produce colour hard copy for presentation, display, record-keeping or working copies.

The user-friendly system connects easily to the computer by means of a black-and-white video line and an RS232C communication line. A compact, desk-top peripheral, Palette measures 16 x 8 x 6 inches and weighs 12 pounds.

Polaroid (UK) (CW), Ashley Road, St Albans, Herts AL1 5PR. Tel: (0727) 59191.

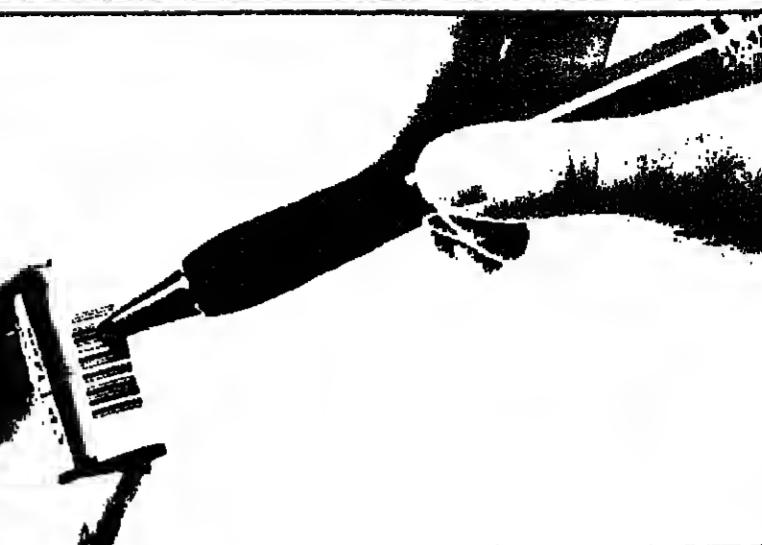

Palettes can be used with the

TV turns out hard copies

MITSUBISHI is to market a TV set that can turn images on the screen into hard copies.

It will market domestically a printer-incorporated TV set in late October. The TV is a 21-inch type and will cost 258,000 yen in Japan.

In early December the company will also put on the market a TV printer than can be plugged into conventional TVs. The printer, priced at 69,800 yen, can also be connected to VCRs, video cameras and personal computers.

The image on the screen is converted into digital information, memorised in LSI large scale integrated circuits, controlled by a microcomputer and quietly printed on thermo-sensitive paper in monochrome images of 280 dots by 230 dots every 15 seconds.

The company expects the new product to be put in a variety of uses in homes and offices.

Mitsubishi Electric Corporation (CW), 2-3 Marunouchi 2-chome, Chiyoda, Tokyo 100. Tel: Tokyo (218) 2171.

"IF I WAS A PARCEL I'D TRAVEL WITH XPTOO!"

If it was up to you, you'd probably prefer to go XPT. For then, at least, you could be sure you'd always arrive at your destination on time.

XPT specialise in the rapid delivery of small parcels (up to 30 kg.) and documents to most parts of Europe, including a fast and reliable customs service.

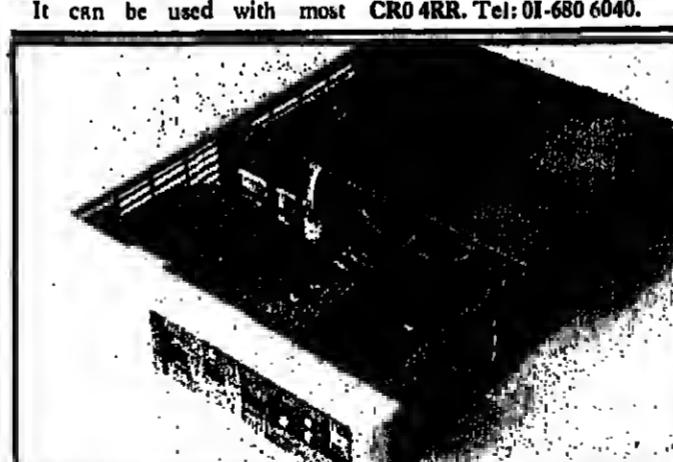

We guarantee that a parcel collected late in the afternoon will be delivered the next working day in any of over 1,500 towns in the XPT delivery network.

XPT back up this guarantee through their own offices and their own fleet of cars and aeroplanes in 14 European countries.

XPT is completely reliable and often costs less than air freight. If you would like more information, just call Free-phone 3738, or complete and post the coupon...

Pragmatic Programmer

(Banking software/micro computers)

Central London

c £10,000

In only 18 months Computacenter has reached the forefront of its field as a specialist in the development of microcomputer based banking software. The company's impressive client base incorporates a range of 'blue chip' Investment and Merchant Banks.

To continue their policy of expansion, Computacenter is seeking a pragmatic person who can demonstrate experience in the following areas:

- * 18 months + programming
- * Micro computer software development
- * Excellent communication skills

Experience in Business Basic and/or Pascal with some exposure to Banking or Financial applications would be an advantage.

Computacenter

IBM System 34 Prog and Analyst/Programmer

Nottingham

c £10,000 pa

Bell Fruit (UK) Limited is a well established and major force within the leisure industry.

The company is installing a newly developed distributed processing network of System 34's to support information processing for its locations throughout the UK.

The data processing department consists of a small development team who are responsible for an effective and efficient service.

To continue its policy of expansion the company needs additional professional people who can demonstrate the following qualities:

- * A sound knowledge of IBM GSD systems
- * At least two years programming experience, preferably in RPG II

BELL-FRUIT (U.K.) LIMITED

Senior Programmer

Central London

c £11,500

Cambridge Data Limited specialises in the supply of turnkey systems for the clothing and allied industries.

Their product range incorporates a wide variety of commercial applications eg Factory Production Control, Accounts, Stock Control and Order Processing, for CP/M based multi-user networks using a wide range of micro computers.

Cambridge Data Limited is now seeking an experienced professional to develop his/her career with a growing company.

Candidates will have experience in the following areas:

- * 2-4 years with an independent software house

HUNTERSKIL

We are Gresham Life, part of the worldwide AMEV Group of Companies, now undertaking a major automation project through the development of a Dictionary controlled Information Management System on a new IBM 4341.

Therefore we are urgently seeking a number of experienced DP professionals to join the existing development groups within our Information Services Department at our South Coast Head Office.

We are able to offer attractive remuneration packages which include highly competitive salaries, mortgage subsidy, non-contributory pension scheme, free life assurance and permanent health insurance plus relocation assistance, where appropriate. If the opportunity to develop and advance your career, in this pleasant south coast resort appeals to you, please write in confidence or telephone with brief career details to:

Mr M. J. H. Gresham, Gresham Life Assurance, 2-6 Prince of Wales Road, Bournemouth, Bournemouth BH4 3HQ. Telephone (0202) 767685.

Operations Manager

In fact the role will be developing and maintaining a system of automated management of a large operation, in an environment of high automation, using IBM 4341 and QLLC required.

Dictionary Controller

A good system with experience of maintaining automated and manual libraries in a controlled Data Processing environment is required to fill this critical role within the System Development group. Experience of using DATAMANAGE, PANALIST and PANEXEC would be an advantage.

Systems Designers

Analyst or programmers with 2-4 years experience in an IBM 370 or 4300 environment using COBOL are required to fill several positions within the Systems Development group. Successful applicants are likely to be aged between 25 and 35 and willing to become involved in all aspects of the DP function.

Senior Systems Professionals

A minimum of 5 years systems experience in the Financial sector with particular reference to conventional and/or Unit Linked Life Assurance is required for these challenging roles within the Business Systems and Applications Development teams. Proven project management experience will be a distinct advantage.

Systems Design & Development Relational Database Products

Relational database technology is one of the major elements in ICL's Networked Product Line Strategy. This is particularly so in the area of Decision Support Systems where users, often business professionals with little or no data processing experience, are accessing and analysing data in an unpredictable or ad-hoc manner.

We are currently building up a specialist team, shortly to be moved to a new centre in Reading, to tackle a wide range of relational database design and development covering the needs of both DP and non-DP oriented end users. This creates opportunities for enthusiastic and able men and women at the following levels.

Project Managers
Senior Designers
Team Leaders
Designers
Programmers

to £16,000
to £16,000
to £12,000
to £11,000
to £10,000

In addition to salaries up to the levels quoted we can offer excellent benefits, challenging project work and outstanding career development prospects in a key area of ICL's strategy for success.

Please write with full cv to Charlie Reames, ICL, Kings House, Kings Road, Reading, Berks. Tel: Reading (0734) 586211.

ICL

We should be talking to each other.

ENTER A NEW DECADE....

Cifer is a British manufacturer of microcomputers and intelligent video terminals. Founded ten years, the Company is committed to sustained growth through engineering excellence.

Recent expansion has led to the following vacancies in Sales Support.

Sales Support Manager c. £15,000 pa + Car

The Sales Support Manager reports directly to the UK Sales Manager and is based in prestigious central London office accommodation. The current vacancy has arisen through internal promotion. Candidates should be qualified to Degree level in a technical discipline relevant to the support of a sophisticated range of microcomputers and visual display terminals. They will need a thorough working knowledge of microprocessor technology, which should include Z80A and Motorola 68000 processors, also operating systems such as CP/M Plus and Unix. Other microcomputer operating system experience would be a distinct advantage.

The remuneration package offered will include a negotiable salary circa £15,000 and a Company car commensurate with a management position.

Sales Support Engineers £11,000 pa + Car

Reporting directly to the Sales Support Manager as an integral part of regional sales teams based in London, Nottingham and Melksham. Candidates should have minimum qualifications to HNC standard in a technical support of a professional sales team.

In all cases candidates are sought with the ability to liaise closely with customers and should be both positive and self motivating in their outlook.

Company benefits include free BUPA membership and life assurance.

For a detailed job description and application form, please contact Jane Thompson.

EAST MIDLANDS GAS

Analyst/Programmer
London + Overseas Travel £10-£12.5K
Personnel attributes and a minimum of 18 months' real-time experience are of prime importance to join a team involved in the development and support of software products for the UK and European insurance markets. Potential exists to move into a specialist technical role. Ref: 0809/A

Assembler Programmer

Herts c. £8.5K
An innovative British company developing POS systems has a fascinating opportunity for a programmer with two to three years' assembler programming experience. Work will be on applications ranging from POS, Stock Control, Accounts and Payroll to Operating Systems. Good colleagues and excellent working conditions. Ref: 0809/B

IBM Programmer

Up to £12K
A large banking organisation that provides excellent staff benefits including interactive development facilities (one terminal for each programmer) and training plans to introduce major new systems. Experience of COBOL, CICS and DL after a good educational background is the key to your participation. Ref: 0809/C

Electronics and Software Engineers

Herts, Beds, Surrey £10-£13K
Opportunities exist with several of our clients to work on both defence and civil real-time systems where the need is for hardware and/or software skills with microprocessors and device drivers. Excellent promotion prospects with expanding companies who are able to offer relocation if needed. Ref: 0809/D

Programmers/Team Leaders

South Coast £8-£16K
Our Systems House client is expanding fast and excellent career prospects are available to programmers with two to seven years' experience of defence and allied work: COBOL, PASCAL or FORTRAN skills are required. New offices are being established in Southampton and staff will work there and on nearby client sites. Ref: 0809/E

Viewdata Systems Micro Programmers
Herts + Overseas possibilities £9K+
Our client is developing viewdata systems and communications links for these and other applications using X25 protocols. Knowledge of X25 and M68000 assembler advantageous but other relevant experience will be considered. Graduates with two years' programming experience preferred. Ref: 0809/F

Software Development
Surrey £10,000-£12,000
This is a specialised role involving the design, development and implementation of software for diagnostic and test purposes. Candidates must be familiar with DEC PDP 11/RSX 11 and ideally have had experience of working at hardware interface level. Knowledge of PASCAL or FORTRAN would be an added advantage. Ref: 0809/G

Programmers (Comms. Software)
Middle £10,000-£14,000
This systems house specialises in transaction processing technology and has designed and installed a number of sophisticated switched networks, mainly in the financial sector. Vacancies now exist for high-calibre programmers with sound COBOL, ASSEMBLER, PASCAL experience and full training will be provided on TANDEM COBOL/TAL. Ref: 0809/H

Real-Time Expertise
Surrey Border £9,000-£17,000
High technology systems house needs designers and consultants to be involved in the development and installation of defence, information and industrial real-time applications. Familiarity with Assembler, or Real-Time/mathematical languages is desirable. Substantial remuneration package and relocation offered. Ref: 0809/I

Analyst/Programmers
London Up to £10,000
A minimum of 12 months' on-line programming experience is required for two bright and enthusiastic programmers to join a small dynamic team involved in the development and support of leasing systems for the UK and European markets. First-class positions. Ref: 0809/K

Computer Professionals

Communications Programmers

London £10,500-£13,000
A very prestigious and profitable organisation is currently replacing its communications network. As a result opportunities of rare scope exist for programmers with at least 12 months' experience of PL/M or PASCAL/RTL 2 to join small highly skilled teams developing new communications facilities and databases. Ref: 0809/L

Scientific Consultancy

London Up to £15,000
A leading UK consultancy requires additional high quality professional staff of varying levels. Candidates must be graduates and have experience in one of the following areas: Digital Electronics, Simulator, Design, Navigational Systems, Avionics or Acoustics. Excellent career prospects in a growing organisation. Ref: 0809/M

Mathematicians
North London £13K
Mathematicians are needed with experience of target acquisition, trajectory modelling and simulation to join team working on the early stages of a major new weapon system project. Good degree essential. Relocation assistance will be provided if needed for candidates to join this company which offers outstanding career prospects. Ref: 0809/N

Analyst Programmers
London/Overseas Up to £12.5K
A rapidly expanding systems house with worldwide client base needs two bright and enthusiastic programmers to join a small dynamic team involved in the development and support of leasing systems for the UK and European markets. First-class positions. Ref: 0809/P

Exciting job opportunities in Leicester for Data/Database and Communications Specialists

Engos has embarked upon a major development programme, and has plans for a large scale redevelopment of its current business systems. These developments employ the latest advances in communications and data management facilities. Hardware includes 4 Sperry 1100 series mainframe computers with a communications network of 250 terminals currently being expanded to more than 600. Vacancies are for:

Data Analyst

up to £12,144

This post offers a challenging career in the increasingly important area of data management. The position will involve data analysis/database design on new developments and the maintenance of existing databases, including the administration of the Sperry Mapper system. Candidates must be self motivated and be able to communicate effectively at all levels within the organisation. It would be an advantage to have a working knowledge of Codos database facilities and data analysis techniques. Ref. No. 21028

Systems Programmer/Senior Systems Programmer

up to £12,144

The person we seek is an experienced and self motivated systems programmer with a proven track record in communications software support or development. Knowledge of one or more of the following would be an advantage:-

- line protocol handlers
- terminal software
- communications architectures (ISO/OSI, DCA, SNA)

Ref. No. 21029

In return we offer rewarding and satisfying work in a friendly environment. Benefits for both posts are those normally associated with a large company and include relocation assistance where appropriate.

For further details please telephone Tam Coxon on 0533 551111 Ext. 2322. Detailed written applications to Industrial Relations Manager, Engos, De Montfort Street, Leicester, quoting the appropriate reference number on both envelope and letter. These posts are open to both men and women.

Closing date: 21st October 1983.

EAST MIDLANDS GAS

ANALYSTS & PROGRAMMERS

MVS TRAINING

CITY to £13,000 pa

Multi-national organisation based in the City is strengthening its technical side. This has necessitated the need to employ good DOS/VSE SYSTEMS PROGRAMMERS. Current hardware consists of IBM 4341's, upgrading soon to IBM 3080's, which will utilise the MVS operating system, thus creating a perfect opportunity for successful candidates to migrate to MVS. This is a fast growing department offering excellent staff benefits. Ref: S1282.

CICS TRAINING

CITY to £10,000

A City-based International Bank is currently recruiting BASIC Analysts/Programmers. Candidates should have a minimum of 2 years programming experience, and preference will be given to people with a knowledge of PDP hardware. Benefits include subsidised mortgage, season ticket loan, pension etc. TRAINING on VAX will be given. Opportunities are also available for Senior A/P's to move into project management. Ref: F1135.

ANALYST/PROGS

SW LONDON to £13,000 pa

This MANUFACTURING plant situated in South West London would like to recruit good IBM ANALYST/PROGRAMMERS, with at least 2 years programming in FORTRAN, MACRO or BASIC+. This is an ideal opportunity for those with experience of real-time systems to advance their careers. EUROPEAN travel will be necessary in some cases. Ideal candidates should have knowledge of RSX11 or RT11, but training will be provided. Ref: P1247.

PL1 PROGRAMMERS

CITY £8-12,000

One of the largest and most successful international insurance broking groups based in the City are recruiting a number of PL1 programmers. Interesting on-line applications await you in a sophisticated environment consisting of an IBM 4341, Series 1 Micros and recently installed WANG VS equipment. Candidates with a good standard of education and between 2-5 years experience of PL1 programming, should apply now for an early interview. Ref: A1310.

CICS PROGRAMMERS

SURREY £10,000-£12,000 pa

Large international travel organisation have positions available for programmers with at least 2 years programming in COBOL on IBM hardware, using CICS. Their computer is an IBM 4331, with a large on-line network of terminals, both remote and local. Wide range of interesting development work available covering various systems. Excellent salary and benefits on offer, generous WORLD-WIDE TRAVEL CONCESSIONS, free life assurance and subsidised staff restaurant. Ref: S1244.

SYSTEMS ANALYST

CITY to £13,500

The major organisation is looking for ANALYSTS to join their expanding project team concerned with developing ON-LINE ACCOUNTING SYSTEMS. Our client houses an IBM 3033 running under MVS, MVS/DB2/DC with communications links to a PRIME MINI. The successful applicants will have around four years' total experience, preferably gained in an IBM mainframe environment and ideally have had some exposure to mini. Opportunities for career progression are excellent. Ref: A1271.

These are just some of the positions available. If you particular "expertise" or "ideal job" has not been advertised, then give BBS a call and discuss your career requirements with one of our recruitment team.

SBS RECRUITMENT
Scientific & Business Systems Limited
22 Bloomsbury Square London WC1A 2NS
Telephone 01-637 9541 (24 hr answering service)

ANALYST/PROGRAMMERS

DEESIDE (NORTH WALES)

We are the UK's major manufacturer of Optical Fibres to telecommunications standards: an Anglo-American partnership operating in ultra-modern, purpose-built premises. Our computer section is already expanding and we are now looking for a sound and enthusiastic man or woman to join us.

Initially you would form an interface with the process control section and would be involved in the development and maintenance of production systems, including material requirements planning, work in progress tracking and production reporting.

You must be a graduate in a science discipline who has at least four years experience, a programming background with analytical skills, and should have a versatile approach with the ability to communicate fluently with users. A knowledge of VAX VMS, Fortran, one other high level language and a commercial background would be a distinct advantage, but not essential.

The benefits package reflects our progressive company policy and includes competitive salary, 25 days holiday per year, private medical insurance, and an attractive relocation package (in appropriate cases) which includes generous help with legal, estate agent and removal fees, together with a disturbance allowance of 15% of salary.

We are located on the North Wales/Cheshire border within easy access of the country, seaside, and the historic city of Chester, with good housing and schools locally.

If you are keen to develop your career in a stimulating environment at the forefront of technology then write with comprehensive career and personal details to:

ND Wallace,
Employee Services Manager, Optical Fibres,
Second Avenue, Deeside Industrial Park,
Deeside, Clwyd.

SALES? Is this your attitude?

Don't be blinkered to the idea of selling a product or service which may be better than yours (or to the whole idea of selling)?

We have clients who need to be represented in every region of the UK, including vacancies for young men and women who wish to enter a sales career. Product areas include:

package applications software (financial/commercial), VDU's (emulations and colour graphical), multi user, multi processor microsystems, printers (matrix and laser), word processors, minicomputers, modems, multiplexers, branching panels, network management systems, distributed data processing systems (minis and micros), various OEM peripherals, 32 bit minis, 2nd generation micros, personal computers, stand-alone processors.

Salaries range from £2,000 pfd for trainees to £38,000 pfd for those with proven success.

Fill in the coupon, or phone for an explanatory brochure (and a form) which tells you all about the system that beats the system.

For over 12 years sales personnel have been using Lansdowne to make a change for the better.

All posts are open to men and women and our service is completely confidential for companies and jobseekers.

Your Software skills

will help them keep their cool.

up to £14K...attractive benefits...excellent prospects
MANCHESTER...realistic house prices and a 25% saving...
your next career move to a more rewarding way of life!

Our impressive range of Data Communications Systems has been widely acclaimed in the UK and overseas...where computer assistance is used in the deployment of resources in swift response to ever-changing and sometimes critical conditions.

Command and Control Systems...Computer Aided Mobilising systems for the Fire Brigade and Emergency Services are produced. These range in size from a large system used by the Greater Manchester Fire Service to small CLARION systems now being supplied to UK County Fire Brigades in association with communications call-out equipment.

Air Defence Display and Communications Systems...provide computer assisted facilities for the compilation of 'recognised air picture' or 'air-sea picture' data and for narrow band transmission of this data to remote centres in a network.

Message Switching Systems...provide the switching for low and medium speed networks for the UK and Australian Civil Aviation Authority, the R.A.F. and other UK Government departments. Message formats handled include ICAO, AFTN and ACP 127.

To play a key part in the future development of our real time communications systems we are very interested in hearing from SOFTWARE SPECIALISTS and SOFTWARE ENGINEERS with a degree in an Engineering Subject, Mathematics or Physics and significant experience in real time computer systems.

Informal discussion...please contact Colin Roberts, Career Development Manager on 061-428 0771 during office hours and 061-428 0194 after 5 p.m. and at weekends, or write to Colin, quoting reference 329/42, at Ferranti Computer Systems Limited, Bird Hall Lane, Chendle Heath, Stockport SK3 0XQ.

C³I technology

New frontiers for Systems, Software and Hardware Specialists-up to £16k

Can you take an unconventional approach? Advanced systems, advanced applications, advanced markets - these are the outstanding features of C³I development: the highly responsive integrated systems for Command/Control/Communications/Information essential to meet the fast-moving scenarios of modern warfare.

Having produced the world's most advanced tactical communications system, Plessey has become a leader in the promotion and development of C³I technology worldwide - even its second generation systems are nearing full development. Today, it is the first company to offer a full C³I capability from single radio to digital switching systems, and it is now creating the way for more 'firsts' with a new programme of investment and expansion at its C³I centre in Christchurch on the South Coast.

The Christchurch experience. If you have at least 3 years systems or software experience in real-

time applications on minis and micros (salaries up to £16k) - or hardware experience, particularly in design, systems reliability and maintenance (salaries up to £12k) - this could be your opportunity to start a long term career in a rewarding, professional environment. Tools include VAX 11/780's INTEL MDS etc, etc; and while programming is in CORAL, the date at which we move to ADA is decided. Engineering facilities provide on-line access to CAD/CAM and interface, with on-site VAX systems. Big company benefits include generous assistance with relocation, where applicable, to our desirable South Coast location between Bournemouth and the New Forest.

Please write enclosing a full c.v. or ring for an application form to J. Hilliker, Recruitment Manager, Plessey Defence Systems Limited, Grange Road, Somerford, Christchurch, Dorset, BH23 4JB. Tel: FREEFONE 9021 (24 hour service). Please quote ref: C.W.6.

PLESSEY
electronic systems

REAL-TIME SOFTWARE DESIGN using 'Coral' and 'Mascot.'

An opportunity to contribute to the most advanced and complex Defence and Communication Systems of our generation.

SENIOR ANALYSTS, ANALYSTS and SENIOR PROGRAMMERS

Southern UK

to £17K basic

The success of securing major new contracts by the international leader in Defence Electronics has created unique Real-Time design problems for engineers with the ability and experience to influence project direction via their technical contributions. We are currently building a centre of software excellence populated by an internal consultancy group capable of directing projects through sub-contract or programming teams.

If you are: -

- aged 25+
- degree qualified or equivalent
- experienced with Coral/Mascot in Systems Design

we would like to discuss career opportunities up to System Consultant levels within our new team. You may be currently employed in Defence establishments or within Software houses engaged in defence projects and have a desire to develop your career in both technical and managerial directions.

We can offer a high degree of design automation with the latest software tools, the constant interface with hardware design to gain total systems concepts, liaison with a variety of clients and other agency specialists.

The Company benefits are attractive with generous provisions for relocation to a rural part of Southern UK with excellent communication links to major cultural and leisure centres.

For an initial and confidential discussions please call Bob Archibald or Bob Rae on Newbury (0635) 33445 quoting reference W/130C, Senior Analyst W/131C, Analysts W/132C, Senior Programmers or write in strict confidence to:

ARCHIBOLD RAE CONSULTANTS LIMITED

(High Technology Search & Selection),

7, London Road, Newbury, Berkshire RG13 1JL.

Tel: Newbury (0635) 33445.

ARC

A keen eye for team management?

**Advanced Telecommunication Systems
South East**
c.£14,000 p.a.

Could you set up a project team by combining effective technical leadership with good man management? If so...

Your responsibilities will include organizing a team of engineers handling the detailed design and implementation of software for advanced voice and data systems

Liaison with customers will include regular technical presentations and overseas travel. Reporting directly to the U.K. Engineering Manager you will receive a large degree of autonomy in maintaining the smooth running of the project and quality of the product.

To succeed - objectives must be established and must be met. However, you will not only be a task manager. A team of six to eight design engineers will require training, guiding and motivating through a highly sophisticated project.

The company has experienced a 70% increase in profits from 1982-1983 and is one of the most successful high technology companies in the world. The salary and benefits package is extremely competitive (with relocation assistance available where appropriate).

For more detailed information telephone Marc Zundel on 01-938 1804 (or 01-602 0685 evenings/Saturday mornings) or write to him with full career details.

All applications will be treated in strictest confidence.

Merchant Banking

City of London

Our client has twin UNIVAC 1100/60's servicing a network which is currently being expanded to support over 100 micro-computer based terminals. If you join this well-established DP department you will be producing systems for one of the City's leading Merchant Banks and will, therefore, be gaining the following valuable benefits in addition to the salaries quoted.

- Mortgage Subsidy
- Non-contributory Pension
- Profit Sharing
- Free Life Assurance
- BUPA
- Interest-free Season Ticket Loan

Please contact Joan Ainsworth on 01-681 8311 or write to her at C.S.S., 6th Floor, Carolyn House, Dingwall Road, Croydon, Surrey, CR0 9XF.

Analyst/Programmers

£9,000 to £15,000 plus benefits

Our client is working on a wide variety of financial systems and, in addition to a sound background in COBOL programming, is looking for experience of some of the following:

- Investment systems including Portfolio Management and Valuations
- Dealing Room Systems
- Foreign Exchange Systems

Previous design and implementation experience is called for, together with the ability to liaise with users at many levels.

PL/I Contracts

Come on you PL/I experts - where are you hiding?

Our clients, predominantly major City institutions, are regularly calling upon us to provide freelance PL/I programming support, but there is a limit to what we can do without first finding more of you.

If you are proficient in the use of PL/I, that will be a tremendous start; if you practice JSP techniques, so much the better; if you have experience of IMS DB/DC, you have hit the jackpot!

Working conditions are excellent; the environments are friendly; contracts, both long and short, are available for a start anytime over the next 6-8 weeks, but the sooner the better; rates are very attractive.

Don't delay - send your CV or telephone Barrie Frost as soon as you can.

Analyst/Programmer c. £10,500 p.a.

Programmer c. £9,000 p.a.

ICL ME29 COBOL

LOCATION: WORCESTER

The Company:
Dolphin Showers is an expanding company in the home improvements market. We are part of Koen & Scott Holdings Ltd. which includes Alpine Double Glazing Ltd. and Sharp Bedroom Designs Ltd. Koen & Scott is a member of the Hawley Group of Companies.

The Equipment:
ICL ME29 Model 37 currently running under MTS with Cobol.

The Requirement:
We are seeking to employ an analyst programmer and a programmer who will form the nucleus of a new data processing department, this function having previously been carried out at group headquarters. Experience of ICL Cobol in an on-line transaction processing environment is considered essential. Ideally candidates should also have had some ME29 operating experience.

The Career:
The positions are demanding ones offering both the opportunity of being at the start of a new department and considerable responsibility to the successful candidates. Several major development projects are in progress and we are committed to the introduction of data processing in most aspects of the Company's business.

The Rewards:
As well as highly competitive salaries we offer a range of excellent benefits including pension scheme, life assurance, discount on Group products and, if necessary, assistance with relocation expenses.

Interested? . . . Then please contact either Chris Morrow or Deborah Halestone of Total Selection who have been retained to advise on this appointment.

Total Selection

Medical Systems here in South Herts has worldwide design authority for a range of electronic imaging equipment including CT scanners, nuclear diagnostics and conventional X-Ray equipment.

We have the best of both worlds - the backing of a large successful Company impressed by our ability to produce creative and innovative products on time - coupled with a medium sized 400 employee self-contained engineering, quality and manufacturing organisation.

We utilise a multi-functional project team approach which encourages engineer involvement from product proposal stage, through design spec., prototype stages to initial manufacturing batch. Some customer contact, usually a clinical evaluation in a hospital, is often required. Projected growth in '84 means the recruitment of engineers in Autumn '83 to allow time for planned technical and product training.

Anticipated project vacancies, at junior and senior engineers level are

SOFTWARE DESIGN ENGINEERS

Should be graduate with experience of Fortran and an appreciation of structured programming. Training given in C or BCPL. Working on real-time image processing applications.

SALARY RANGE
£9-15K
REVIEWED
AFTER 6 MTHS

ELECTRONICS DESIGN ENGINEERS

Ideally graduates with a minimum of 2 years experience of circuit design including mini and micro expertise with bit-slice technology.

WHY NOT HAVE A CHAT WITH PAUL SHEPPARD OR GLYN WRIGHT, OUR SENIOR ENGINEERING MANAGERS, ON THURSDAY 6TH, MONDAY 10TH AND TUESDAY 11TH OCTOBER 1983, UP TO 9.00 pm ON RADLETT (09276) 4722, REVERSING CHARGES.

If this is not convenient, please write, enclosing CV to

IBM OPPORTUNITIES

IBM COBOL

To £10,000 + More.

Super opportunity to get into the world of finance. The London based international bank require a Programmer with 2 years + IBM experience, preferably with DOS/VSE, to work on a range of database projects using DL/1. CICS and/or DL/1 experience would help, but more essential is the ability to fit into a small team environment, where you are encouraged to use your initiative. Full range of banking benefits including subsidised mortgage. REF. CW/2801

PROJECT MANAGER PROGRAMMER MIDDLESEX

£13,500 (+ car) To £11,000

This company is well-known world wide for the service it provides. The installation comprises of an IBM 4341, under DDS/VSE with CICS, and the requirement is for a Programmer with two years + IBM DOS/VSE COBOL, and possibly knowledge of CICS and/or Easystore, who is capable of user liaison, and moving more towards analysis. The Project Manager should have experience of leading a major project from design through to implementation, and have extensive user liaison experience. Knowledge of IBM Systems would be advantageous but not essential. Benefits include BUPA, pension and life assurance and company car at the senior level. REF. CW/2826

IBM ASSEMBLER

CITY £7-13,000

My client is an established financial services group utilising IBM 4341s under DOS/VSE with CICS. They require a Junior Analyst/Programmer and a Senior Analyst/Programmer to develop and maintain a range of on-line financial systems including stocks and shares. 12 months + IBM ASSEMBLER is required at junior level, and three years + IBM ASSEMBLER with DOS/VSE and CICS at senior level. This is a friendly and energetic team environment, where by using your initiative, technical and personal 'kills', your future career prospects are excellent. REF. CW/2821

IBM MVS COBOL

CITY £8-12,000

Due to continued expansion, my client is seeking two additional Programmers and one senior. To work on IBM 3341/3031 installation you should have 10 months + IBM COBOL with DOS/VSE or MVS, and some on-line experience, and at least a minimum of three years IBM MVS COBOL. It is a responsible attitude towards supervisory duties. CICS on-line training can be provided and there is a wide range of exciting development projects underway. Benefits include five weeks' holiday, sports and social club, annual bonus. REF. CW/2610

SYSTEMS

PROGRAMMERS/ALL LEVELS

To £14,000

Two more positions to list! If you can offer 18 months + IBM systems, programming experience with DOS/VSE, VM/CMS or MVS and any knowledge of CICS, VTAM, VSAM, MCP, ACF2, I have positions throughout London and the Home Counties up to senior level. Also juniors with 12 months + IBM ASSEMBLER experience. REF. CW/GEM

ANALYST/PROGRAMMER MIDDLESEX

Successful IBM 4341, VM/CMS, DOS/VSE site is currently seeking an Analyst/Programmer with two to four years' IBM PL/I experience to assist in the development of a wide range of systems including order-entry, production control, invoicing etc. To enable you to participate fully in these new development plans, you will receive full training in CICS, and plenty of in-house education to enable you to expand your technical skills. Excellent career prospects and a full company benefit package including travel allowance, pension scheme and a subsidised restaurant. REF. GW/2502

IBM COBOL

HERTS £8-10,000

This highly respectable multi-national company are seeking an Analyst/Programmer to complement their development team. You will have an industrial background and some exposure to systems development. This is an ideal opportunity for a young and dynamic personality to come to the forefront. The successful applicant will have two years' IBM COBOL, MVS experience and will be rewarded with an excellent salary and career prospects, with a full range of company benefits. REF. CW/2800

PROGRAMMERS

KENT To £9,500

Would you like to work within a small project team involving a high degree of job interest? Involvement will include a wide range of development application and support work. If you can offer a minimum of 18 months + IBM COBOL experience in an OS/VSI, VM/CMS and IMS or any knowledge of on-line systems, then call for more details. REF. CW/2799

Brushfield House, 12 Brushfield Street, Bishopsgate, London E1 6AN. Telephone: 01-247 3356 (24 Hours).

A division of Tate & Lyle Industries Ltd.

Leon House, High Street, Croydon CR9 3NH

Telephone 01-686 5656

PROGRAMMERS BERKS & MIDDLESEX

To £13,000 (+ car)

There are many new positions now available in Berkshire, West London and Middlesex for ambitious programmers wishing to increase their skills. My clients require 18 months + IBM COBOL, under MVS or DOS/VSE in a commercial environment. You will be working in a development capacity, utilising CICS, DL/1 or IDMS database in the retail, manufacturing or transport industry. REF. CW/2440

ANALYST/PROGRAMMERS

ESSEX £8-10,500

My client, a highly respected manufacturing company are seeking a number of Analysts/Programmers to join a major development project. You will be involved in a major marketing system. Two years' + IBM COBOL is essential preferably within a DOS/VSE, CICS or other on-line environment. Full range of benefits associated with a major company including staff discounts. Training in CICS will be provided where applicable. REF. CW/2737

PROGRAMMERS

CITY £8-11,000

If you consider yourself to be an above average COBOL Programmer with at least two years' experience on an IBM mainframe with a knowledge of DOS/VSE, MVS or VM/CMS, coupled with CICS and/or DL/1, my client

would be interested in knowing about you.

They offer an excellent career path for well-motivated individuals with the opportunity to move into analysis if desired. Benefits and salary are those associated with a large City organisation. REF. EW/3202

ANALYST/PROGRAMMER CITY To £11,000

An established international organisation based in the City have a number of superb Analyst/Programmer vacancies for up and coming D.P. professionals. You should either have a solid IBM COBOL background and have been involved in commercial work, or have a knowledge of design and/or graphics work. You will be working in an IBM 4341/3033 LMS CICS environment for which training can be provided. Excellent career prospects. REF. AW/2815

MAJOR ICL

DEVELOPMENTS CITY

To £12,000 + Subs Mort.

This prestigious financial firm based in the City can offer exciting career moves for ICL 2900/VME professionals from programme to team leader levels. Of particular interest are those candidates who are able to offer skills in either IDMS and/or TPMS. As a successful and progressive company they offer working conditions and excellent perks which include subsidised mortgage and excellent career path.

REF. DW/2482

OTHERS

ICL COBOL

KENT To £11,000

Kent-based ICL 2960 installation is currently recruiting for ICL COBOL skills at various levels. 18 months + relevant experience preferably with DME/GII is required for the programming positions. The more senior applicants will have proven systems experience, and a solid COBOL background, and would be encouraged to move into analysis by writing their own specifications for interesting development projects mainly of a commercial nature. REF. DW/2837/8

DW/2673

PRIME FORTRAN

LONDON £13,000

My client is among the most successful in the Engineering field and due to expansion is looking to recruit two Analyst/Programmers. The requirements are at least three years' FORTRAN and a sound knowledge of Prime. In addition some COBOL, BASIC or INFO experience would be welcome. This is a really superb opportunity to utilise your skills and step away from a straight Analyst/Programmer job into an extremely interesting position which will include Manager Support and the responsibility of making your own decisions and meeting deadlines. Applications are commercial of a marketing and personnel nature, and the company is currently installing a new range of systems including order-entry, production control, invoicing etc. To enable you to participate fully in these new development plans, you will receive full training in CICS, and plenty of in-house education to enable you to expand your technical skills. Excellent career prospects and a full company benefit package including travel allowance, pension scheme and a subsidised restaurant. REF. GW/2502

SYSTEMS DESIGNER

MIDDLESEX £12,000 +

Will appeal to a Systems Programmer who would welcome the opportunity to be at the start of this company's exciting new project linked to the holiday and travel business. In addition to your sound FORTRAN experience, a knowledge of Peikul Elmer equipment and some database would be welcome plus a sound analysis background. Initially you will be working with a small team and every opportunity for advancement will be available as the company expands. Your involvement will be required in developing applications software for on-line reservations and on-line transaction processing. Also your ability to liaise with users and suppliers will be fully utilized. REF. MW/2833

REF. MW/2833

Computer

Programmer

PL/1 and/or RPG11

A vacancy has arisen for a Programmer with E Gomme Limited, who design and manufacture G-Plan furniture. This is an opportunity to fill a key position in a small team, dealing with a wide range of commercial applications. All development is performed on-line for both batch and TP applications.

The installation comprises a 1/4 megabyte 370/126 with 3340

disks, tapes and local VDUs operating under DOS/VS.

If you have more than 2 years' experience of PL/1 and/or RPG11, here is your opportunity to fulfil a major role,

reporting to the chief programmer.

Salary is negotiable according to experience.

Please write to: Computer Personnel Manager,

E Gomme Limited, Spring Gardens,

High Wycombe, Bucks.

REF. CW/2799

ENGLEDOWN

COMPUTER PERSONNEL CONSULTANT

ANY COBOL £10,000

An opportunity has arisen for two Programmer/Analysts with a prosperous multi-national organisation based in North London. They require a minimum of 18 months' recent experience using any structured COBOL, a knowledge of the UNIVAC 1100 under EXEC 8 being especially welcome. Just one of the many benefits in joining this company is the first-class career prospects and training. If you are educated preferably to graduate level and you are now looking for career advancement within a professional environment they promise an excellent starting salary and all large company benefits. REF. AW/2744

DATABASE PROGRAMMERS

KENT/ESSEX £11,000

Candidates must have a thorough knowledge of Database techniques together with at least 18 months' recent exposure to COBOL. Some UNIVAC 1100 or Burroughs experience would also be an asset although not essential. The nature of the work will be all development and on-line and the successful candidates will be expected to assist in the design of future database as well as getting involved with user liaison and providing help and advice to junior staff. An excellent opportunity for an enterprising person looking to expand his career. REF. MW/2831

PROGRAMMERS

My client, a leading leisure company, seeks an Analyst/Programmer with an outgoing personality who enjoys user liaison and problem solving. You must have a minimum of two years' DEC-COBOL and/or BASIC +

experience. Based in Herts, you will be developing new systems from feasibility study through coding to implementation, working closely with users throughout. Training will be given to good applicants with thorough PDP,

COBOL/BASIC + skills. REF. AW/2815

MAJOR ICL

DEVELOPMENTS CITY

CAN YOU DO OUR BUSINESS?

LONDON
S.W.17

The South West Thames Regional Health Authority requires additional staff within COMPUTER OPERATIONS. To be based at their regional computer centre located at Springfield Hospital, Tooling, London S.W.17.

Computing Services are based upon ICL 2968 and 2966 MAINFRAMES running under GEORGE 3/DME which provide financial, medical and managerial information to the region.

OEC VAX MINI-COMPUTER are currently being installed to provide On-line patient administration, Odict Data Capture and Ostatabase facilities to hospitals within the region.

A two-shift system is in operation, and where* indicated the quoted salaries include London Weighting and shift allowance. Additional benefits include excellent recreational facilities (both on-site and nearby), coffee lounge and modern offices.

OPERATIONS CONTROLLER

£11,237-£14,029*

An operations professional is required for this post. Reporting directly to the Operations Manager the successful candidate will be responsible for the shift management of up to 40 personnel and the co-ordination of all activities within operations, including Data Control and Date Preparation.

Applicants must possess proven managerial ability with good communicative skills, both verbal and written. An in-depth knowledge of ICL 2968 hardware is essential.

COMPUTER OPERATOR

£6,820-£8,000*

An experienced George III operator is required to fill this vacancy. Experience of working in a busy medium/large installation would be an advantage, although this is not essential.

OPERATIONS SUPPORT CLERK

£6,667-£9,151

Previous experience in operations is required for this new post to assist the Operations Support and Liaison Officer.

Candidates must possess an in-depth knowledge of ICL utilities and job control language. An ability to communicate clearly and effectively is essential.

DATA CONTROL CLERK

£6,820-£8,000*

A vacancy exists for an experienced Data Control Clerk with a good knowledge of GEORGE 3/JCL and a sound understanding of data control standards and procedures. Suitable trainees will be considered.

DATA PREPARATION SECTION LEADER

£5,683-£6,667

An experienced person is required to lead a team of up to 10 Punch Operators. Previous supervisory experience is essential, and a knowledge of CMC 5200 equipment would be an advantage.

DATA PREPARATION PUNCH OPERATORS

£4,871-£5,443

Vacancies exist for Punch Operators with good key depression speeds (10,000+). Experience of CMC equipment would be an advantage. A bonus scheme is in operation.

For further details contact:
Norman McGregor, SUHTRA, Regional Computer Centre, Springfield Hospital, 61 Glenshane Road, London S.W.17. Tel: 01-672 9988

IBM Programmers

Looking for a new career?

With an IBM 30nn or 43nn environmental background and a year or more of PL/I or COBOL experience, you are a highly sought after individual. Add some knowledge of CICS, IMS or DL/I and an even wider range of opportunities lies at your feet.

That is not all - those RPG experts working with IBM System 34, 36 or 38 kif are also in the running for some very attractive propositions.

Our banking and finance clients in and around London are urgently in need of programmers,

Senior Systems Programmer VAX/VMS

INMOS is now firmly established as a world leader in high performance memories and is about to enter the microprocessor market with a range of innovative products for 'next generation' systems.

We have advanced design and manufacturing facilities in the UK and the US, supported by a worldwide sales and marketing organisation. Our Information Systems group is key to these activities, with responsibility for our multiple VAX configuration, extensive telecommunications network, CAD/CAM applications and office automation.

INMOS is expanding rapidly and as a result we have an outstanding opportunity for a Senior Systems Programmer to join the Technical Support group of the Information Systems division, based at our UK Technology Centre and corporate headquarters in Bristol. As a member of a small team, you will be responsible for the development and implementation of systems and utility software and for performance monitoring, optimisation and day to day running of the computer centre and European data communications network. In addition, you will provide guidance on systems related software to a diverse range of users at all levels of the organisation.

You must have had at least two years' VAX/VMS systems experience and have a sound knowledge of FORTRAN.

DECNET, COBOL and BCPL knowledge will be an advantage. Adaptability, good communication skills and the ability to work under pressure in this stimulating and technically challenging environment are essential.

Our requirements are exacting but if you meet them we can offer an excellent salary and benefits package and the opportunity to progress your career in one of the most technically advanced companies in the semiconductor industry.

Telephone for an application form or send full details of qualifications, experience and salary to: Jacqueline Porter, Personnel Services Manager,

The name for the future.

INMOS Limited,
Whitefriars, Lewisham,
Bristol BS1 2NP.
Tel: Bristol (0272) 200861

London to £18,000

This is a particularly attractive part of the computer industry combining, as it does, the areas of international high finance and constantly improving computer communications systems. Our client has a lengthy background in this area using DEC equipment and now requires additional development and support staff. Good commercial experience in banking or finance is the major requirement.

Herts. £9K-£12K

Continued expansion of our client's system software development has resulted in a number of vacancies for enthusiastic real-time programmers with a background of at least 3-4 years using PASCAL, preferably with Motorola processors. Particular applications include process control, transaction processing, comms, etc. We can introduce you to genuine career opportunities offering significant responsibility at the leading edge of technology.

Sussex £10K-£15K

Recent major changes to our client's product range necessitate the recruitment of experienced real-time programmers with a background of at least 3-4 years using PASCAL, preferably with Motorola processors. Particular applications include process control, transaction processing, comms, etc. We can introduce you to genuine career opportunities offering significant responsibility at the leading edge of technology.

Herts. to £14,000

We are seeking a very experienced person in the area of real-time control systems to solve a range of market needs in the process control field. Candidates must be capable of new product specification and overall systems design. They will follow products through from specification to market launch ensuring continuing product compatibility.

Berks. to £15K + car

We are seeking candidates with 4-5 years experience in an IBM/CICS environment using DBMS to provide pre- and post-sales consultancy for a prestigious company. You must be a self-starter, have a good client manner and be familiar with assembler and a 4th Generation language (e.g. MANTIS). High rewards await outstanding applicants.

Cambs/M'chester
Cambs/M'chester

Continuing expansion in this highly successful manufacturing company opens the door for software people with experience in on-line DP systems, T.P. and comms. Candidates will be expected to assist clients with applications development, perform sizing as required and generally act in an account manager capacity. Excellent prospects and relocation assistance where appropriate.

Middx. £10K-£12K

A successful company in the communications and travel industry, requires several programmers at different levels to join existing development teams. Areas of relevant expertise include Z80 Assembler, PDP11 systems, UNIX and C, PLZ, VMS, CP/M, comms, and travel agency applications. Excellent benefits include special holiday discounts.

Cambs/M'chester
Cambs/M'chester

Two vacancies exist in this development group responsible for the production of Advanced Signal Processing and CAD systems. Packages will include INMOS-compatible Operating Systems, LAN, compilers, high-speed interactive graphics and Videoconferencing. Candidates need to be self-motivated with a good client contact manner.

Berks/Beds. £14,000

Develop your career and your communications software skills by joining a company whose existing range of comms. software is second to none. There are a number of teams working on various developments covering LANs, X25 and 3270 compatible products. Development is in mini and micro systems in assembler and high level languages. Relocation assistance where appropriate.

Systechs S/W
Systechs S/W

Continuing expansion in this highly successful manufacturing company opens the door for software people with experience in on-line DP systems, T.P. and comms. Candidates will be expected to assist clients with applications development, perform sizing as required and generally act in an account manager capacity. Excellent prospects and relocation assistance where appropriate.

Cambs/M'chester
Cambs/M'chester

Attractive positions exist for software professionals in the further development of view data products and related technologies. Currently using PDP11 and VAX with RSX11 and VMS but shortly adding UNIX and C for development tools. Previous experience would be of immediate interest. Positions range from development to project management in a customer environment.

London to £16,000

Our client is currently seeking hardware engineers with four or more years background in microprocessor or complex logic design to participate in the development of a new series of minicomputers and associated peripherals. You should be able to demonstrate project leadership ability and a sound understanding of peripheral and communications interfaces.

UNIX
Development

These are no ordinary positions; we are convinced that any technical authors who are seriously interested in developing careers with leading companies in the computer industry should be talking to us. Our clients are seeking experienced authors who can work closely with software and/or hardware development teams to prepare user manuals and operating instruction texts.

Systechs S/W
Systechs S/W

Opportunities for work on Tandem computers without previous Tandem experience are uncommon and extremely attractive. Our client wishes to meet genuine systems software development people who are keen to develop their career in a software products company. If you have one or more years experience using assembler and a high level language we would like to hear from you.

Tandem Development

Middx. £10K-£12K

The small research unit of a major multinational company currently requires an electronics engineer with 3-4 years experience of digital circuit and computer systems design. You will be supporting the development of image processing and data base applications - oriented systems, designing special-purpose hardware, evaluating equipment etc. Assembler experience a great advantage.

Real-time Specialists

Middx. £15K-£21K

A rapidly expanding computer services and consultancy company requires top level specialists in data communications, distributed processing and electronic point of sale systems. Successful applicants can expect to become involved in any or all activities from consultancy, project management, system design, program development, system testing, installation and education. Rewards will be consistent with the level of experience.

Systems Consultants

Middx. to £20,000

An established centre of software development for advanced mini computer systems has identified the need for a major new product. Several very experienced software implementors are required to work together to design and build this product. Most appropriate areas of previous experience are T.P. monitors, comms. and O.S. We wish to hear from people with 6+ years experience.

Open letter to technical and commercial job seekers at all levels:

We are here to help you. Our free service, to you, is advice and counsel in identifying the most suitable position for the development of your career. Our consultants have held senior positions in the computer industry. They have the experience to understand your needs. If we do not have the position you want, we are prepared to help you find it. Why not accept this invitation to talk over your ideas with us.

Write or telephone (02403) 28383 during office hours.

We are always ready to discuss these and many other interesting positions.

Evenings and weekends only.

U.K. SALES MANAGER

NUMBER TWO IN THE COUNTRY
IMPORTANT COMPUTER MANUFACTURER

RESPONSIBLE FOR THE WHOLE
SALES & SUPPORT FUNCTION WITH MORE
THAN 100 MULTILOCATIONAL STAFF
REVENUE & PROFIT RESPONSIBILITY
BASED IN SOUTH EAST ENGLAND

A considerable and competitive income package reflecting the importance and status of this crucial position will be negotiated directly with the successful applicant who will recognise the primary incentive as being the exceptional career potential available. This will be not less than

£40,000

For the handful of experienced man managers capable of succeeding in this position, an opportunity such as this occurs very rarely. It demands exceptional directional and administrative management skills which can only be acquired from vast experience. Yet, it requires a youthful and innovative style and a particular breadth of vision to integrate with the existing management team and successfully continue to enhance my Client's already formidable reputation.

If you are one of the elite who will identify with this level of responsibility and wish to further discuss this important opportunity, I would be delighted to meet you. May I respectfully add that I am only prepared to disclose the identity and other specific details of my Client at a face to face meeting once the suitability and continued interest of the candidate is established.

Big Companies dangle Big Carrots

Our client, one of Europe's leading Computer Systems Companies, believes in providing its team of professional Sales Executives with the aids to stay on top and enjoy the fruits of success.

Add to your own abilities the benefits of:-

- ★ EXCELLENT FUTURE PRODUCTS
- ★ LARGE USER BASE
- ★ PLANNED PRODUCT AND CAREER DEVELOPMENT TRAINING
- ★ AGGRESSIVE ADVERTISING
- ★ PROVEN MARKETING EXPERTISE
- ★ HIGH LEVEL SALES SUPPORT
- ★ OUTSTANDING CAREER OPPORTUNITIES

PLUS A HIGH LEVEL OF REMUNERATION TODAY AND TOMORROW

The opportunities are based in both BIRMINGHAM and MANCHESTER, for candidates who have already demonstrated Computer Sales SUCCESS preferably in one of the following:-

OFFICE SYSTEMS SALES

Our client's comprehensive range of products covers all aspects of office systems from stand-alone word processing to fully integrated communications systems. High interest has been generated in these products by advertising exposure, so ambitious Sales Executives will be able to take full personal advantage.

NEW USER/COMPETITIVE SALES

Selling a wide range of products, productivity aids and applications solutions to new users or competitive users. These roles offer the successful Sales Executive, job satisfaction, high remuneration and excellent career growth.

MAJOR ACCOUNT SALES

The opportunity to sell our client's total product range to major organisations in both the Public and Private Sectors, ensures prestigious positions for Senior Sales Executives who wish to optimise their future career and earnings.

REMUNERATION PACKAGES INCLUDING COMPANY CAR
WILL BE MATCHED TO YOUR EXPERIENCE AND WORTH.

OUR SUCCESSFUL CLIENT IS INVESTING MILLIONS OF POUNDS IN ITS FUTURE.

-WHY NOT INVEST IN YOUR FUTURE?

SENIOR APPOINTMENTS - £14K +

MEMO

... exciting new management opportunities with expanding young software house. Minis/micros to £14,000

£14,000

MINIS/MICROS

A division of a recognised service industry group, this specialist mini/micro-computer software house has been established for over five years. As part of a planned expansion they are currently looking to recruit further experienced professionals to strengthen the middle-management team.

Programming Team Leader - Development to £14,000

The major responsibility within the R + D area of the company is to assess new software and ensure that it is compatible with the various micro-computers supported. This will include writing various screen-handlers as well as conducting systems and candidates should have had project leadership experience in a micro-computer environment. Expertise should include either CP/M or MP/M support with knowledge of "C" or 8080/8086 Assembler.

KPG

Computer Services

Expand your Talents into...

Systems Analyst/Designer

Role and earn up to £14,000 p.a.

We are one of the leading local authorities in the introduction of Information systems with an active professional department where high standards and training are key priorities. We operate an IBM 4341 with DOS/VSE CICS and COSOL. An ISM 308E is planned for 1984.

The majority of our work is new development, encompassing a wide variety of challenging systems including finance, housing, libraries, planning and law.

Reporting to the Project Manager, you will be involved in all aspects of project development including systems analysis and design, technical supervision and reviews, and implementation and documentation using SIS Structured Methodology.

You should have a minimum of five years in Data Processing, preferably in an IBM environment with at least 3 years COBOL and some analysis experience. You should be able to communicate with both technical and user staff, and supervisory experience would be an advantage. A local authority background, while useful, is not essential.

We offer a competitive salary, 28 days leave, interest-free season ticket loan after qualifying period, subsidised restaurant, flexible working hours and excellent training facilities. We are conveniently located in modern air-conditioned offices close to Kensington High Street.

For further details ring Tony Eldred on 01-937 5464 Ext. 330.

Application forms quoting Ref CW487 from the Personnel Service, The Town Hall, Hornton St, London W8 7NX. Tel: 01-937 8582 (24 hour answering service). Closing date for applications 20th October, 1983.

WE ARE AN EQUAL OPPORTUNITIES EMPLOYER.

Computer Operations Controller

Already a clear market leader in horticultural products for both amateur and professional growers, Fisons Horticulture has ambitions for further development. Keeping ahead of this expansion is the development of sophisticated management information systems.

To support the Division operates on ICL mainframe and distributed network supplemented by micro computers on local networks.

To meet increasing demands we now have a challenging opportunity for an operations controller to co-ordinate and direct the work of the operations team. Considerable liaison with development staff and involvement in the management skills and abilities beyond those of a leader are essential.

Our ideal man or woman will probably be aged 25-35 with a strong technical background in computer operations, amassing experience in on-line communications network, and experience with ICL mainframe equipment.

A competitive starting salary will be supported by an excellent benefits package which includes relocation assistance where appropriate.

For further details or an application form telephone me now or write enclosing a comprehensive c.v.

SALES OPPORTUNITIES KUWAIT

Diyar United Trading & Contracting Company, one of Kuwait's fastest growing distributors of Prime and Calcomp systems are seeking talented and ambitious Sales Executives for their Kuwait office.

The ideal candidates should have 3-5 years sales experience and account management with at least 2 years preferably on project management, draughting/graphics applications.

Responsibility will be to develop, maintain and achieve sales targets within a specific market.

Experience on Prime and Calcomp products would be a distinct advantage.

The company offers attractive basic salary related to experience plus generous commission structure. Also usual expatriate benefits will apply.

Interviews will be held in London. Please send completed C.V., telephone number, address and if possible Telex No. to:

Marketing Manager
DIYAR UNITED TRADING & CONTRACTING COMPANY
P.O. Box 44240
Hawalli - Kuwait

Computer Operator

Bournemouth
£6,000 - £7,500 Plus Benefits

Remuneration inclusive of Shift Allowance
Salary is subject to review on 1 January 1984
Benefits include relocation package and mortgage subsidy (where applicable), non-contributory pension, free life assurance, subsidised restaurant, sports and social club and staff discount shop.

Requirements

Abbey Life has a vacancy for a Computer Operator with a minimum of 1 years experience of MVS/VS2 (VS1 would be considered). Knowledge of JCL and utilities would be an advantage but not essential. 5 'O' levels (including English and Maths) are also required.

The Company operates a 5 day, three shift system, currently under MVS/SP on IBM 4341 and 3083 CPUS with ACF/VIAM, CICS/VS and ROSCOE.

Please write or telephone for an application form to:

Val Hastrop or Alison Davies,
S. & D.P. Technical Recruitment,
Abbey Life Assurance Company Ltd.,
80 Holdenhurst Road,
Bournemouth BH8 8AL.
Tel: (0202) 292373 ext. 4444.

بنك الكويت التجاري

THE UNITED BANK OF KUWAIT LTD. ANALYST/PROGRAMMER

LONDON

To £12,000
+ Banking Benefits

The United Bank of Kuwait has been a dedicated DEC user for several years. The bank has recently upgraded to two VAX 11/780s one of which is solely deployed to development work. The position will be based at the bank's head office in the City at Lombard Street.

The successful candidate should have a solid programming background within a DEC environment to include at least one year with any VAX equipment. The ideal language would be MACRO 32 but the bank are prepared to retrain and therefore wish to interview analysts/programmers with MACRO II or any high level language. Applicants should be educated to a minimum of 'A' level standard and be good communicators but more importantly should have the ability and drive to join a small team of enthusiastic analysts/programmers working in a stimulating environment. Previous banking experience would be of special interest but by no means essential.

To find out more about this excellent career opportunity please contact SEAN ORSLER on 01-404 4821.

ERICSSON
 WE ARE READY
 WHEN YOU ARE
 RECRUITMENT & SELECTION PRODUCTS
 FOR TOMORROW'S INTEGRATED INFORMATION
 SYSTEMS

Ericsson Information Systems is the U.K. subsidiary of the world leading telecommunications manufacturer. Their goal is integrated information systems and office automation for which they already have all the essential components:

Knowledge in the area of telecommunications
Advanced ergonomically designed terminals
Expertise in decentralised mini computer systems
Custom-tailored computer systems
Data communications, data transmission and networking products

To ensure the Company's continued development at their current growth rate of 30% per annum, the following additional software appointments are now to be made:

Senior Systems Advisers

BIRMINGHAM AND LONDON
SALARY PACKAGE - £11K to £14K + Car or Car Allowance

The successful candidates will have a positive approach to both pre and post sales, together with at least 5 years computing experience. You will need to demonstrate experience of:

- Commercial/Business Systems
- Project Management
- Systems Analysis
- Telecommunications
- Mini Computers
- Sales Support

Systems Advisers

BIRMINGHAM AND LONDON

SALARY PACKAGE - £9K to £11K + Car Allowance

To be offered these positions, you will need to have up to 5 years computing experience and will be able to demonstrate a working knowledge of the following:

- Commercial/Business Systems
- Mini Computers
- Systems Analysis
- COBOL programming experience

Senior Programmer/Analysts

BIRMINGHAM AND LONDON

SALARY PACKAGE - £9K to £11K + Car Allowance

These roles will assume the principal technical responsibility within the Group. The following expertise is required:

- A minimum of 2 years COBOL on mini computers
- Real time commercial applications experience
- Experience of structured programming
- Telecommunications

Applications Programmers

BIRMINGHAM AND LONDON

SALARY PACKAGE - £7K to £9K + Car Allowance

The appointed candidates will work as part of the Customer Services Team with a high level of user contact in tailoring standard application packages and the provision of technical support. The required experience is:

- 12 months COBOL on mini computers
- Real time commercial applications experience
- Structured programming

BUT ALL THIS IS NOT ENOUGH - WE NEED A DIALOGUE WITH YOU
ON THE SHAPING OF THE SYSTEMS OF THE FUTURE. ERICSSON'S ARE
READY WHEN YOU ARE AND THEY ARE WELL AHEAD OF THE FIELD.

For further information and a local interview in either Birmingham or London, please telephone the Advising Consultants on 061-236-1157 during office hours. Evenings and Weekends until 9.00 p.m. telephone Jeff Walton on 061-962-0002 or Roy Morris on 0422-623153.

SENIOR PL/1 PROGRAMMERS

FINANCIAL SECTOR
ATTRACTIVE PACKAGE

Our client is a leading finance house and a member of a major Group. With systems development proceeding at a healthy rate they would still like to talk to Programmers with a solid (two-three years) background in PL/1. Also of interest are candidates from a large scale OS or MVS environment who have had some exposure to design and structured programming techniques for the development of on-line systems. In return for this kind of experience our company will provide ample scope for personal and career growth with incentives and abilities being recognised and stretched. As far as the financial aspects of a future with this particular company are concerned, we believe it will be very difficult to improve or even match the package offered and are confident that successful candidates will enjoy a career that is rewarding in both senses of the word.

INTERNATIONAL CONSULTANCIES

ANALYST/PROGRAMMERS
£10K-£20K + EXPENSES + TRAVEL

Several of the larger, well-established consultancies are currently undergoing massive recruitment campaigns. Their requirements are as FLEXIBLE as your needs. If you have any of the following attributes - COBOL, PL/1, CICS, OL/1, VAX/POP, AOA/BAS, IOMS, IMS DB/DC, EASYTRIEVE, VOLIE, ROSCOE, RPG II or III, AOF, TSO/SPF, UFO, MK IV, SHAOOW, AOS/O - you could soon be working in this fast and rapidly expanding environment. Obviously the more versatility you can offer our clients, the better the salary they can offer you. At a more senior level, salaries can be up to £20K plus expenses and European travel. These are ideal opportunities for programmers with around two years' experience wishing to expand their knowledge, as extensive TRAINING will be provided. If you're interested in getting out of that day-to-day end-user rut, contact SIMON KONING to discuss these exciting opportunities further.

**Targa Computer Recruitment**

Monaco House Bristol Street Birmingham B5 7AS

Telephone 01-283 9941 Telex 25851
Telephone 021-622 2045 Telex 334237

SOFTWARE SPECIALIST

CENTRAL LONDON Up to £12,000

**TECHNICAL CHALLENGE & VARIETY
MAINFRAME WITH MINICOMPUTERS
EXTENSIVE COMMUNICATIONS NETWORK**

You would be working in a small technical software support team, forming an important part of our clients' modern mainframe installation, where high standards are maintained and up-to-date methods are used. The appointment offers:

- real potential for creative people to make a positive contribution
- varied, challenging work, including operating system enhancements, performance measurement, development of in-house software, problem solving and technical advice to users
- training in the latest techniques, including database and TP
- sound career prospects - if you have management skills, you could be appointed to a team leadership post.

This opportunity will interest specialists with significant mainframe software programming experience, including VME/B, and ideally TPMS or IDMSX.

Please ring us for a confidential exchange of information, quoting ref. 199. Messages will be recorded after hours.

**EDP SYSTEMS 01-637
5796**
52-53 Margaret St. London W1N 7FF

ANALYST/PROGRAMMER

LONDON TO £12,000

An international pharmaceutical company based in London are in the process of developing major new on-line systems. The current configuration comprises of an IBM 4341 running under VM/CMS, using CICS and OL/1, with proposals to implement new utilities such as MANTIS. They now require an Analyst/Programmer with a good COBOL background to assist in the implementation of the new systems. The ideal candidate should not have less than one year's COBOL programming experience with some exposure to an on-line and database environment, although for the right person, extensive training will be provided. This is one of the few major companies that offer a structured career path into an area of OP of your choice, i.e. pure analysis, or a more technical role such as systems programming. Company benefits include THREE SALARY REVIEWS a year; family BUPA and if you like GODD FOOD, a FREE three-course lunch. Food for thought! If you're interested to learn more about this exciting opportunity, then call me, SIMON KONING.

PROGRAMMER/ANALYST

LONDON AND HOME COUNTIES £9-£16,000

Three of our clients have asked us to identify candidates to help them fill some urgent requirements within their existing OP departments. The first is a MULTINATIONAL ENGINEERING COMPANY that still retains a friendly but hard-working environment. The work falls into two phases and with a GENERAL COMMERCIAL APPLICATIONS background and some experience of ENGINEERING you will have the RIGHT experience. Development work is carried out on a PRIME with FORTRAN, BASIC, COBOL and INFO and other MINI experience would be useful. The positions are LONDON based and the salary range is £10,000 to £12,500. The second is a major ICL site, who have many openings. PROGRAMMERS are needed who can capitalise on their own personal skills preferably with VME 2900, VME/B experience. The work is both interesting and rewarding and depending on skills the salary range is between £8,500 and £16,000. Thirdly REALTIME SOFTWARE and HARDWARE ENGINEERS are required by a very successful manufacturer and systems house. ASSEMBLER skills or GRAPHICS experience with OEC or INTEL is of interest as is experience with PASCAL and "C".

Telephone 021-622 2045 Telex 334237

Australia**ICL 2900 Specialists
All levels to A\$40,000**

Logica's highly successful Australian company is now looking for further staff in both its Brisbane and Canberra offices.

We are interested in recruiting staff with experience of designing and implementing systems using ICL 2900 series hardware.

Assignments will involve support to clients in the implementation of advanced business systems using database, networking, communications techniques and distributed and personal computing. Leading-edge ICL technology experience is required and we are keen to talk to graduates with

background involving one or more of the following:

■ VME ■ TPMS ■ LARS
■ IDMS ■ CAFS

We have opportunities at various levels of experience, including project leaders and managers. We are keen to see candidates with practical data base experience.

Interviews will take place in the UK during October.

If you are interested, please write to Helen Gracie, or phone her for an application form (quoting ref. PTY 1) at Logica Limited, 64 Newman Street, London W1A 4SE. Telephone 01-636 5451.

SNR SYSTEMS ANALYST**/ANALYST
PROGRAMMER**

Herts/Essex Border to £12,000

International Distillers and Vintners (I.O.V.), part of the Grand Metropolitan Group, commenced a major investment program to bring OP services in house two years ago. To maintain the impetus of development they now need two additional experienced systems professionals.

Based at the central office you will join a small dedicated team working directly with the users on the development and implementation of major commercial systems. Hardware is an IBM 4341 group 2 running under DOS/VSE with Data General Novas and Eclipses in the distribution centres. The programming language is Cobol with extensive use of CICS and OL/1.

To rise to the challenge of working within this exciting environment you should have had around four years total DP experience covering both programming and systems. Exposure to CICS and OL/1 would be a considerable advantage, however, the major requirement is for business awareness. Applicants who have not had this experience but who believe they can mature in this dynamic environment should apply as opportunities exist at slightly lower level.

The benefits of living and working in this pleasant rural environment do not stop with the challenge of the OP department. The company recognises that employees have a life outside the 9-5 routine and the additional benefits cover holidays, travel and product discounts. There is a subsidised restaurant, and, on site and a very active sports and social club.

Ring David Mason Johnn at KPG or on 01-747 0969 to arrange an early interview in London or Herfordshire/Essex.

Salaries: £8000 - £18000 with all usual benefits

Founded in the late sixties Systems Designers Limited is established as one of the leading system consultancies achieving a unique reputation with its policy of high quality products for real-time, mini and micro computer based systems.

To maintain a steady controlled rate of growth and meet the increasing demands of industry SDL are seeking experienced software professionals to contribute to and share in the success of a dynamic and forward looking company.

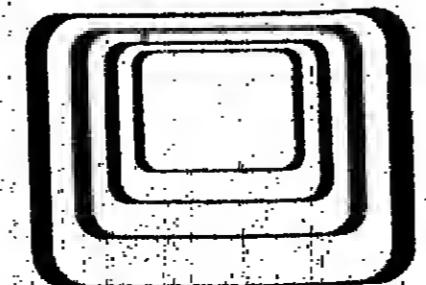

Current requirements are for Programmers, Software Engineers, System Engineers and Consultants with experience of real-time systems based on mini and microcomputers and a knowledge of high and low level languages. Experience of some of the following would be of particular interest:

- Internal system structure of UNIX applications
- Software and hardware for digital image processing
- Tactical communications (SATCOM, VHF, HF) applications
- Videotex, financial and banking or telecommunications
- Fault tolerant systems or advanced graphics
- In-depth compiler design and construction.

If you have a degree or equivalent and at least two years relevant experience we would welcome a call on Freephone 3179 or if you prefer, write to Pamela Hayes-Jones.

**DO YOU KNOW YOUR
TRUE WORTH?**
Late Night
Phone-In
Monday 10th October-
Until 8pm-01-734 0152

As the number one in the industry, we at Knight Programming Support have, over many years, accumulated a wealth of experience and knowledge in all areas of the data processing industry. As a consequence we believe we are in an unrivalled position to give you a free and totally unbiased opinion as to your true worth in today's market place. We may also be in a position to suggest new and more lucrative areas in which your skills could be developed and utilised to the full. Why not give us a call. After all you have absolutely nothing to lose and you could have everything to gain.

If it's not convenient for you to contact us on Monday 10th October, please telephone us on 01-734 0152 any time during office hours, or on the following numbers evenings and weekends until 10pm:

Commission a winner

Engineers for commissioning & test to £13,000
New minicomputer system

You will be working on one of the most advanced
mini/micron systems developments in the world.

The company - recipient of Queen's awards - has
established itself as a world leader in a remarkably short
time, progress achieved through committed management,
a massive investment in R&D and a working environment
where gifted individuals are allowed to develop
their ideas.

The prototypes of the hardware have been tested. The
software teams are designing the whole range of software
including a relational data base and advanced graphics.

Engineers are required to help the 40 strong R&D product
team to commission the preproduction units and later to
deal with pilot production.

Each hardware system consists of a collection of
functionally dedicated processors incorporating AMD b11
slice designs and the latest 16 bit MOS microprocessors.

Voor experience must have been gained over two or
more years and should include TTL logic, b11 slice or
microprocessor devices, disc subsystems and familiarity
with a wide range of test equipment.

You can look forward to genuine prospects in a fast
growing organisation, real job satisfaction and substantial
rewards which include R&D and relocation assistance to
an attractive rural area.

To find out more, please phone John Clifford on
01-248 3913. Alternatively write enclosing a full CV, and
giving a contact phone number. Applications will not be
forwarded to our client without your permission. Please
quote reference J229/CW on both letter and envelope.

FTB

Micro & Mini Package Development

Analyst/ Programmer

We have been retained by a computer company
which is part of a large transport group.
This company is developing a fully integrated
computer package which services haulage
companies throughout the United Kingdom. It has
been developed on minis and there are now plans
to convert this system on to minis.

This is an excellent opportunity to join this young
company and develop with it as it grows. It is
anticipated that a move into management will
follow shortly.

The skills required are strong micro knowledge
from both the technical and user aspects (Sirius,
Apple etc), knowledge of transport operations
particularly desirable but not essential. Working
with minimal supervision, you will need to be a self
starter, possessing the skills to get things done
quickly and efficiently. Technical support will be an
important part of the position which could involve
UK travel from time to time. A flexible attitude to
work is essential.

For additional details please phone Sue Ashby on 0784 59247 or at home on 0844 53531
(evenings & weekends).

J 4/11/83

PROJECT MANAGER

(Minis) c £14,000

Ideal first-time (Berkshire)
user opportunity

This is a rare opportunity for a computer-literate, articulate communicator to assess the system needs of a small but thriving Group-linked operated and computerise their HQ and remote business processes from start to finish.

The company distributes engineering supplies from 12 UK outlets and is in need of mini-based, distributed systems incorporating direct order entry, stock control and sales order processing. Your job, following investigation and choice of hardware will be to contact, educate and train users, take on outside-author software and install and run optimum systems.

Generally you will need a business systems awareness, knowledge of non-mainframe machines and the ability to find your way around commercial packages. As importantly, you will enjoy varied business dealings with remote site management and potential suppliers, be positive and at ease in user communication, thrive on deadlines and pressure and relish a first-time user challenge.

Computer Appointments made easier

REAL TIME SOFTWARE SPECIALISTS

£8K-£20K

You may have as little as 2 years experience, providing that experience is concentrated in one particular field of computing. Of course, if you have several years experience you may have in-depth knowledge in more than one area of application. The point we must stress is that our clients who are users, computer manufacturers, consultants and systems houses, seek specialists not dabblers.

Locations are: London, Home Counties, other parts of England, Scotland and overseas too.

Status: All levels from Programmers, Software Engineers/Designers up to Principal Consultants and Managers.

Areas of applications in which we seek specialists are: Communications (all manner of), Communications Protocols, Data Acquisition, Process Control, Command & Control, Intelligence Systems, Databases, Compiler Design, Software Tools, Operating Systems, UNIX, ADA, Military and Defence Systems, Simulation, Image Processing, Expert Systems, EPOS, Mascot, Context, CAD/CAM Systems.

We are particularly interested in those experienced with PDP/11s, VAX, Argus, Data General, Intel, Motorola, using ASSEMBLER, CORAL, PASCAL, RTL/2, FORTRAN.

If you are educated to degree level and have specialised, perhaps in a field we have not mentioned, please contact Beryl McLaren, any hour of the 24, you'll get a personal reply, not a recorded message.

01-836 9719

PS. We may be able to assist this years graduates who have 1st class honours degrees.

QUALITY ASSURANCE CONSULTANT

West London/Middlesex

£13 - 14.5K

- At least 3 years project leadership.
- Experience in configuring Hardware and Software solutions.
- The flexibility of personality and the communicative skills necessary to work closely with senior management, sales people and technical specialists.
- The ability to work on multiple projects.
- Experience in evaluating software products and packages.

For a variety of reasons, not the least of which is their attractiveness to staff of the highest calibre, a handful of systems companies have emerged as the most effective suppliers of specialised software and turnkey systems. Within this Group our Client is unique even by the standards of a remarkable and diverse industry. No other UK systems company has its breadth of products and services and its balance between software and hardware activities.

Critical to its ongoing success is setting and maintaining the highest standards in the proposal and development of total solutions incorporating data processing, software products and office systems. To ensure the maintenance of these standards we are seeking to recruit an experienced systems professional to join the Quality Management team. Ideally applicants will have a mix of the following skills outlined opposite:

In return for these skills our Client offers an opportunity to work at the centre of one of the most technologically innovative companies in the United Kingdom. The successful candidate will work with a wide variety of equipment which will include IBM, H.P., I.C.L., and Data General and will enhance his knowledge of products, software development and task management. Because of the central role which this position occupies within the company career development opportunities are unrivalled. Large company benefits include free BUPA membership, Life Assurance etc. For further details telephone Keith Taylor at our Reading office or write enclosing full C.V.

Telephone 01-439 6288

MOVE WITH US TO NEWBURY

SALESMAN Circ 18K + car

We are seeking to recruit a salesman to sell high volume desk top and multi-user computer systems, both to larger organisations and to first time users. The emphasis is placed on providing system solutions, and not merely hardware sales. There will be no defined territory, although it is envisaged that the majority of business will be generated in the South of England.

The candidate will

- have two years sales experience in office products or computer systems.
- be between 20 & 30 years of age.
- have the ability to develop the sales & marketing activity of this progressive company with the guidance of the Sales Manager.

If you are an energetic self starter who is looking to progress his career by joining a successful expanding company please call Barbara Allen at our Reading office.

SENIOR PROGRAMMER To £12K

We require a Senior Programmer to take responsibility for a team of programmers and provide an interface between this group and the board of directors. This demanding and responsible role requires:

- Two years + COBOL, preferably, but not essentially on minis and micros.
- Sound software development skills in a commercial environment, including some analysis and design.
- A strong self-motivating and enthusiastic team worker.
- The ability to grasp fundamentals of accounting and management information systems.

This exciting position offers the opportunity to participate in a company with high growth potential, personal development and career progression. For further information please contact Keith Taylor at our Reading office.

PROGRAMMER To £10K

An energetic self starter is required to complement our young and expanding development team. Systems will be based on a wide range of micro computer systems, operating systems, and database management systems. Skills required are

- one or two years commercial programming COBOL
- some analysis exposure
- ability to work as part of a close team
- adaptability to changing circumstances and requirements

This is a real opportunity to enhance your career prospects and work in a challenging but rewarding environment.

For details of this post please contact Keith Taylor at our Reading office.

The main benefits will derive from working for a company whose drive and enthusiasm is coupled with a highly professional attitude and excellent product range. They offer exciting challenges and ground floor opportunities to become an integral part of a successful and expanding company.

TRIED AND TESTED...

He knows he is safe. His rope will carry his weight and more. His pitons won't snap. His karabiner won't break. In short, they're up to specification. Instron tested them. Instron Limited develop and produce state-of-the-art standard and custom-built testing machines for industry. Our in-house software and hardware teams are currently working on new discoveries, new designs and new approaches which will continue the revolution in industrial computer applications. A field in which Instron has long been a leader. Now, throughout our High Wycombe-based organisation, we are looking for different people to further this work and their own careers. And be stretched a little too.

Senior Programmer

Structural Testing Division
Up to £12,000 HP9826/36 - micros

Is your next step design and supervisory responsibility? We need an experienced programmer to join a team providing applications programs and systems software for dynamic structural and components testing. You should be educated to degree standard in computer science or engineering. You will also need experience in systems software, executives and device handling, as well as the control and interfacing of instrumentation or similar equipment.

Hardware/Software Engineer

Materials Testing Division

This new post involves a key role in our Materials Testing Division - in the front-line of research and development into the Instron Dynamic Testing Machines of the future. The small and creative software team of which you will be a part helped the Company gain a Queen's Award for Technological Achievement in 1982. Your function will be to continue demanding development work of compilers, operating systems and communications software.

You should have a degree in Engineering or Physical Science with two or more years' experience, preferably with some background in digital electronics design.

Hardware/Software Engineer

Materials Testing Division

We need a young engineer to become part of our Materials Testing Division computer group. As such you will be designing and installing custom software and hardware to control our range of materials testing machines.

You will be particularly working on the design and support of interfaces for systems based on desktop computers and minicomputers. You will therefore be communicating with our customers on a regular basis. You should be qualified to degree standard or equivalent in an electronics-related subject, and have 1 or 2 years' experience in the electronics or a related industry, preferably involving circuit design. You should also have experience of, and an interest in, microcode.

The Company offers excellent salaries in line with its rapid progress, together with the benefits you would expect from a major employer including a non-contributory pension and life assurance scheme.

If you wish to discuss, informally, one or more of these vacancies in greater detail, please ring our Personnel Department on High Wycombe (0494) 33333. They will put you onto the appropriate team.

Or, for an application form, ring the Personnel Department or write to Mr. Barry Thornton, Personnel Manager, Instron Limited, Coronation Road, High Wycombe, Bucks HP12 3SY. Tel: High Wycombe (0494) 33333.

There are few projects in computing that can match the variety provided by Birmingham City Council. We have the equipment to meet the challenge with an IBM 3033 and over 400 terminals.

Birmingham City Council, the largest city authority in England, serves a population of over 1 million with a diverse commercial and industrial community. The City Treasurer's Department has responsibility for over £700m expenditure p.a. on capital and revenue account and playing a vital role in the Department's activities is the purpose built Computer Centre, which is located close to the City centre. The Centre operates an IBM 3033 with 13,000 megabytes of backing store to support over 400 terminals with a further 200 planned. The next phase of the City's Development Plan is taking place which has created a number of opportunities for professional computer personnel to work on a wide selection of applications.

The wide range of the Council's work provides opportunity for variety from Education and Property to Planning and Social Services involving large data base systems and incorporating on-line processing facilities for application development.

Good terms of employment include flexible working hours based on 36 hour week, assistance with relocation in approved circumstances. For application form candidates should apply to:

City Treasurer (Ref: PSO), Council House, Birmingham B3 3AB.
Telephone: 021-235 2993.

Canvassing will disqualify. An equal opportunity employer.

BIRMINGHAM CITY COUNCIL

SYSTEMS ANALYSTS

(within range £9,060-£12,408) (Ref: CD7)

To develop applications (financial and non financial) and work with the minimum of supervision. It is unlikely that the persons appointed will have less than three years' systems experience.

PROGRAMMERS

(within range £5,640-£9,660) (Ref: CD10)

Applicants should have experience of designing, writing and testing COBOL programs/transactions in an OS/MVS environment, preferably using IMS.

PROGRAMMERS & ANALYST PROGRAMMERS

We dress Cowboys. We don't hire them.

N. LONDON & NORTHAMPTON
UP TO £12,000

In an industry as fast moving as ours it's not difficult to understand why

Our manufacturing and sales activities in the UK are both extensive and complex. A brief reflection on our installation based on an IBM 4341 and HP 1000/64 combination which fits together in other software, network. Over the next

few years we're committed to strengthening the system and expanding it to include all applications in all phases of our operation. This is if you hadn't already guessed it, where you enter the picture

The prime requirements we're looking for are a minimum of 4 years' solid Cobol experience (I've done a bit" doesn't count) mixed with some exposure to interactive systems and database management, DL/I, TOTAL and IMAGE (all or any). Beyond this you'll need to demonstrate a high degree of resilience and a potential which we may well develop towards management.

Our next major project is now visible on the horizon of events, but we're not great believers in baptism in 89.

Now is the time to find out more about the rewards, the prospects, the environment and the occasional trip to Scandinavia. So call, Isabel Dixon, who is acting as our adviser, on (0992) 552552 or alternatively send your CV directly to her at:

Macmillan Davies Personnel Consultants,

The Old Vault, Parliament Square,

Hertford SG14 1PU.

PLAN YOUR CAREER WITH PRESCOT

England
Australia
New Zealand
South Africa
Zimbabwe

Careful planning often makes the difference between the successful and the not so successful computer career. Prescot Computers understand this because we specialise in overseas computer recruitment, and the selection for an overseas post requires extra care by Prescot, employer and employee. We use the same principles of care whether UK only or overseas employment is involved.

We wish to interview: Programmers, Systems Analysts, Analyst/Programmers, Consultants and Sales People for a broad range of clients in England and overseas. Salaries range from:

£7,000 to £20,000 p.a.

If you are interested, why not telephone us on 01-836 8885/6 for an informal discussion. Alternatively if you prefer write to:

Prescot Computers Ltd
11/13 Broad Court, Covent Garden, London WC2 5QN

PROJECT LEADER

The Company
Glaxo is one of the world's leading pharmaceutical Corporations based in the UK and trading throughout the world.

The Requirement
We are seeking to employ a project leader who will take responsibility for the automation of our North European operating companies. The successful candidate should have a sound dip background including experience of using online and database techniques in a commercial environment. We envisage that he will probably be in his late 20's qualified to degree level and currently either a senior analyst or project leader.

The Career
The initial project is a highly challenging task which will involve considerable travel, a high degree of responsibility and the opportunity to work on one's own initiative. Following the successful conclusion of this project, we would expect to be able to offer a senior position within the Glaxo organisation.

The Equipment
Our preferred hardware supplier is Hewlett Packard and all our current systems are based on HP 3000 Kit. Experience gained in an IIP environment would be regarded as an asset although it is not considered as essential.

The Reward
As well as a highly competitive salary we offer the usual benefits of a large company including a non contributory pension, a group BUPA scheme, sickness benefits and generous expense allowances when travelling on company business.

Glaxo

HOLDINGS p.l.c.

If you would like further information about this highly rewarding and challenging position, please contact Chris Mason of Total Selection Ltd who has been retained to advise us on this appointment.

WE'RE TAPPING TOP TALENT IN SHERWOOD COUNTRY.

Based in Mansfield, with easy access to some of Britain's most attractive countryside, the Computer Division of one of the country's most successful and profitable textile groups needs more independent spirits.

If you are self-motivated and have the flexibility to meet day-to-day problems, you will enjoy the challenge and satisfaction of working with our highly-skilled team. We have already pioneered the introduction of CAD into textiles, and many other advanced applications are currently being developed.

Visits to member companies will be involved so a current driving licence is essential.

In addition to attractive starting salaries these posts offer an excellent opportunity to further your career prospects within a fast-growing, successful team. Relocation assistance may be available.

Comes to Sherwood Country, where you can still see the wood for the trees. It's a real breath of fresh air.

SENIOR PROJECTS ANALYST

c£12k + Car

As senior member of the Computer Division, you will fulfill a consultancy role throughout the diverse activities of the Group. The main brief will be to research, design and implement computing projects in accordance with agreed business objectives.

This will involve the provision of technical assistance and supervision to project teams when necessary, as well as liaison with computer manufacturers, user departments and group companies.

It's a role calling for extensive computing experience — at least 10 years in DP, with proven ability in programming, systems analysis and management — plus sound communications and leadership skills. A formal qualification to degree or equivalent level is also required.

If you are top talent send your c.v. to:

Mr. I. H. Jones,
Personnel Director,

JOBS IN THE NORTH

The lure of the north hypnotises southerners

Graduates from the south are keen to stay in their university towns in the cold north says Margaret Park

ONE misconception about the north of England – the idea that its inquisitive flocks south to the (sometimes) sunnier views and picture-sounds – is nowhere clearer than in the behaviour of northern computer staff.

If they come from the north, it's the north they love and the temptation of slightly more opportunities down south has little pulling power.

And even dyed-in-the-wool southerners are hypnotised by northern charm – gone is the idea that no-one not wearing a suit-jacket would venture nearer to the North Pole than Potter's Bar.

Hull, for example, a name not calculated to fire the imagination of those ignorant of its appeal, apparently lays claim to countless graduates of its university who, having spent three years studying in the city, will not be too wary.

Radius Computer Services says a large number of its technical recruits are Hull graduates who want to stay.

"We get a lot of interest locally in our ads," said Radius company secretary, Pamela Waits. "Once people have been here a couple of years they want to stay

and we don't usually lose staff to companies outside Hull."

Radius, which is made up of two companies – Radius Ltd and Radius Computer Maintenance – has firm ideas about what makes a good programmer or analyst.

"We prefer to take trainees who haven't got a computer background," said Waits. "Those who've done computing courses," she added, "arrive with closed minds and haven't the flexibility of attitude that makes a good programmer."

Radius has recently been successful with two graduate recruits from disciplines as far removed from computer science as possible. Both are from Hull University but one studied philosophy and the other psychology.

Radius' recruitment is steady at present according to Waits, who says the company is in more need of staff for the field engineering and technical side of the business than software people.

Northern Foods, for instance, the holding company for a large collection of food firms once carried out the data processing for all its subsidiaries at its Hull headquarters. Now its subsidiaries, which include North Country Breweries and Dale Farm Foods,

life beside the river Hull.

"We're a bit isolated from the rest of the north of England," said Waits, "but it's very pleasant, and most of our staff losses are to local competitors."

Two sizable northern firms who are probably representative of many more say that their need for computer staff has been cut by a move to distributed data processing.

"Once people have been here a couple of years they want to stay and we don't usually lose staff to companies elsewhere"

ing which puts more of the computing responsibility in the hands of the end user.

The technical staff are those who train new customers to use their systems and give demonstrations to prospective buyers.

Of the company's 70 staff, two-thirds are technical in one way or another and most are committed to

quirement," said the spokesman, "and we support them if they need it. For around £3,000 to £4,000, a micro-based system in their own building will do the job they want."

A Huddersfield engineering firm is going through the same process of change.

"We're reducing staff because of a new computer strategy that is moving to distributed processing based on Honeywell DPS 6 minis," said a spokesman for the firm, "and this means more responsibility for the end user."

"We're trying to identify our future role," said a spokesman for Northern Foods. "We won't close the centre but some of our computing staff have moved to the operating companies where their skills are more urgently needed."

"We've had an effective role in the past," he went on, "but this change is a recognition of the age of the micro. Our users have said 'I can do it myself for less money.'

The company is after an experienced systems analyst but one with a background in what is

known as a made-to-order manufacturing environment. It means the company is concerned with manufacturing goods to make to customer specification.

In the public sector, the picture for the north of England is a bit uncertain as for the rest of the country. With massive cuts in national health budget, recruitment for the regional health authority computer department will suffer.

A spokesman for the North Regional Health Authority in Newcastle said: "No change will be taken on now until the express permission of the regional team of officers which is top authority body in the region."

And at the headquarters of the local authority, Newcastle City Type, the story is even worse.

"It's possible," said its processing manager, "that we'll have to cut back on staff and those in the computer department."

Formica lead the field in the development and manufacture of decorative laminates and to help maintain this position we have installed an IBM 4341 running under MVS and CICS/OL1.

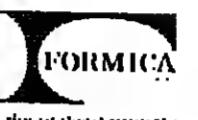

We are looking for an additional systems programmer who will be responsible for the maintenance of the operating system and teleprocessing/database software. Applicants should therefore be fully conversant with either MVS or OS and CICS/OL1 in an operational

environment.

A competitive salary is offered together with a benefits package usually associated with a large Company, and assistance with relocation will be given in approved circumstances.

Write with full career details to:

Derek Culhane, Development, Training and Recruitment Executive, Formica Limited, Coast Road, North Shields, Tyne and Wear, NE29 8RE.

It's the north's attractions and not its dark satanic mills that appeal to southern graduates.

Professionals . . .

... FOR SUPPORT AND DEVELOPMENT

Manchester: £9,000-£11,500 + benefits

A leading catering management and consultancy company are in the early stages of developing a distributed computer system based on Burroughs hardware. These new positions are quite fundamental to the future development of the company's systems.

The SUPPORT MANAGER will become the centre of technical expertise in all aspects of our hardware, software and operations. We are looking for experience in CMS, MCP, DMS II and for the ability to communicate well – both verbally and in writing. This is a national post and a company car will be made available.

The BUSINESS ANALYST will assess the feasibility of systems and then design and develop them in a project context. Fourth generation development aids and user participation will be vital to the success of these systems. Burroughs experience is not necessary, but a systems background, preferably gained in a software house environment, is essential.

If you have the skills that we can use in this demanding business, then contact me, Martyn McReynolds, for an informal discussion as soon as possible – either on 061-932 9401, or on 061-427 1288 outside office hours.

Batchelors is in the middle of an extensive programme of introducing on-line systems across three sites, through a network of IBM 4300s operating under DOS/VSE. The following are currently required to fulfil key roles in the current high development environment at our Head Office in Sheffield.

DATA BASE ADMINISTRATOR

c. £13,000 according to experience

In this central management role you will be expected to design DL/1 data bases which give good performance whilst still satisfying the business requirements. Maintenance and support of these data bases will develop with increasing user contact into an Information Centre approach, thus calling for a greater range of skills beyond purely technical ones.

To meet the challenge of this position you will need to have had seven years experience in an IBM DOS/VSE environment, a substantial part of which must include DL/1. A good data base design background is essential and knowledge of IBM's data dictionary would be an advantage.

This is a Unilever Management appointment, offering excellent benefits and conditions of service, including relocation expenses where appropriate.

DESIGNER/PROGRAMMER

c. £7,800 according to experience

This is an excellent opportunity for an experienced designer/programmer with a sound knowledge of CICS/DL1 and COBOL to develop skills within our busy development team. You will assist in the specification and design of systems data bases, fulfilling an essential role between the business and technical functions of the Business Systems Department.

Three to four years' programming/design experience is required, and experience of working in an application team environment and knowledge of UDF would be an advantage. We offer excellent benefits and conditions of service, including flexible working hours and 26 days' annual holiday.

Please write giving brief details of your experience to date to:

Lynn Brothers

Staff Officer,

Batchelors Foods Limited,
Wadsley Bridge,
Sheffield S6 1NG.

APPLICATIONS PROGRAMMER

MALE OR FEMALE
£ Salary negotiable

Sedgefield Area

Challenging opportunity to take responsibility for day-to-day running and program development on commercial real-time micromainframe project. The successful applicant is likely to have at least two years' applications software experience on multi-user hard disc microcomputer systems.

Alpha Micro computer: 80 megabytes hard disc, 1 megabyte main memory, 20 VDU terminals with networking to satellite offices.

Alpha experience not essential, since training will be given.

Please contact John McReynolds,
51a High Street, Buxton,
Derbyshire SK17 9PF.
Telephone: 061 932 9401.

Ref. 598

UCL**is expanding . . .**

We have your business in mind

Universal Computers Limited - sole UK distributor of ULTIMATE computers (all of which use the famous PICK Operating System) is growing . . . fast. So it needs more sales and support staff to meet the increased demand for existing and new products, including a powerful new super micro (also running PICK) competing with many mini systems.

UCL turnover will exceed £4 million this year - a 40% expansion over 1982. Nevertheless UCL retains the small company atmosphere, so much appreciated by so many computer professionals, and offers real career development.

UCL requires NOW

- ★ Senior Sales Managers - earnings c£30,000
- ★ Sales Persons - on quota earnings £24,000
- ★ Technical Support Engineers - up to £12,000
- ★ Applications Support People - up to £10,000

for its Head Office and new West London premises.

Company Cars will be provided, and the UCL package includes both Pension and Private Health Schemes.

Contact Nick Drescher or Chris Holman - right now!

New WANG VS100 Installation

Central London Office 01-400-2144, 01-

Basic + Benefits

Join the London Headquarter operations of a Company offering on-line accounting, contract and management services to the TV, film and entertainments industry.

This opportunity offers the chance to work with the originator of the software whilst he is in the UK tailoring, enhancing and developing it further for the European and UK market, and at the same time training you for a management role.

This system is based on WANG VS100 hardware and developed in COBOL; WANG experience would be ideal, although any good mini COBOL experience, ideally financially based, would be considered.

For further information, please contact Jenny Dalrymple-Hay or Peter Henrick on 01-493 2947, from 8 a.m. to 4 p.m. Monday to Friday or weekends Jenny Dalrymple-Hay on Beaconsfield (04946) 4579 or Peter Henrick on 01-390 1640 quoting Ref. 5018.

DALROTH & PARTNERS LTD. 4 HALF MOON STREET, LONDON W1. 01-400 2947

NEW MIDDLESEX-BASED COMPUTER CENTRE**IBM 3083 - MVS/JES2, TSO/SPF, CICS and IDMS**

Our client is a major international organisation operating in the Financial Information Services sector of the market on a worldwide basis, and is currently setting up a new centralised European computer centre. Decisions have been taken to develop a wide range of financial services for UK and European customers which involves the design and implementation of large DATABASE systems using IDMS and CICS as a TP monitor.

Immediate requirements are to recruit a number of key D.P. Professionals which will provide them with the scope and opportunity to make a significant contribution to the development of new major batch and online/realtime projects. Excellent career progression will be afforded to those D.P. Professionals who can demonstrate their skills and contribute towards these ambitious development plans.

PROJECT LEADERS

c.£15,000+
Applicants must be able to demonstrate a sound technical track record of design and implementation of large-scale batch and online database applications, with experience of IDMS or other database environment. A working knowledge of command level CICS is essential for one of the positions, preferably gained in an OS/MVS/JES database environment. A knowledge of BAL would be an advantage, but not essential. Project Leaders are responsible for functioning systems and associated documentation.

DATABASE ANALYST

c.£14,000+
This position will suit someone with a sound knowledge of IDMS (IBM or ICL), together with a working knowledge of COBOL. The successful applicant, who will be responsible to the Database Administrator, must be able to communicate effectively at Project Manager level, and make database design decisions. Additional functions would eventually include responsibilities for staff and junior level.

If you are attracted to the challenge of these ambitious development plans, which provide the scope and opportunity for excellent career progression and generous benefits package, call IAN C. BUCK, MBCS, Managing Director.

ANALYST/PROGRAMMERS

10 £13,500+
Applicants must have sound experience of IBM COBOL, together with a working knowledge of JCL preferably gained in a large-scale online database environment using OS/MVS. Exposure to analysis and design and specification level is essential. A knowledge of BAL would be an advantage, but not essential. Training in CICS will be given where required.

PROGRAMMERS

10 £12,500+
A minimum of 2-3 years IBM COBOL and/or BAL is needed, together with a working knowledge of JCL preferably gained in an OS/MVS environment. Training in CICS will be given where required.

10 £20,000+car
The position will suit someone with extensive DP expertise, together with a proven technical and managerial track record. The successful applicant will take a leading role in the pre-installation and running of this new Computer Centre.
